

Bill Nye the Science Guy

Gravity

Table of Contents

1. Implementation Guide	2-9
This descriptive guide will assist you in integrating the DVD science and education content into your instructional program.	
2. National Science Education Standards	10-11
See the complete <i>National Science Education Standards (NSES)</i> correlated for this program.	
3. Episode Guide	12
Step-by-step procedures make it easy to complete the experiments shown in the program. "More Interesting Stuff to Do" gives more experiments that extend student learning.	
4. Lesson Planning Worksheet	13-14
This template helps you incorporate all the features of the Bill Nye DVD into your daily lesson plans.	
5. Student "Know / New" Chart	15
A "Know-New" T-Chart assesses students' prior knowledge and what they learned.	
6. Student Recording Sheet	16
This handout gives you a standardized format that students can fill out as they conduct an experiment.	
7. Glossary	17-18
Use the terms and definitions found here to assist you in direct vocabulary instruction. The glossary terms are also found on the DVD.	
8. Quiz	19
This written version of the interactive quiz on the DVD provides a ready-to-go written test. Multiple choice and true-false items address key concepts found in the standards and in the program.	
9. Quiz Answer Key	20
A separate page contains the quiz answer key.	

Implementation Guide

Welcome to Disney's Bill Nye DVD collection!
With the help of this Guide you can bring instructional DVDs into your science curriculum.

What's on the DVD?

Bill Nye DVDs expand the educational features of *Bill Nye the Science Guy* programs. Each DVD provides students with science content through video clips aligned with *National Science Education Standards (NSES)* and a host of other resources.

Short video clips aligned with the NSES provide a unique opportunity for you to enhance your lessons using DVD technology. Now you can show a video clip, or even short segments of a clip, on command. But there are a host of other features, too! See the chart below for a summary.

From the **Main** menu, there are three chief sections:

Feature	Description
Watch Program Menu	From this menu, you can play the program straight through or use the clips to customize your viewing.
Teacher Support	From this menu, you can access this Teacher's Guide, the Glossary, Internet Links, and the Quiz.
Bonus Materials	Use this menu to try a different discussion starter, download a special screen-saver, or check out never-before-seen footage.

From the **Watch Program** menu, you can:

Feature	Description
Play Program	Play the entire program from start to finish.
Bilingual Mode	View the entire program or clips in English or Spanish.
Glossary Mode	Make links to Glossary terms appear during the program.
Program Overview	View the program introduction, in which Bill discusses the topic covered.
Try This	Show students demonstrating science concepts.
Way Cool Scientist	Meet a real scientist who talks about his or her area of study.
Bill's Demonstration	Look at a science demonstration conducted by Bill Nye.
Music Video	Enjoy a short music video that summarizes the topic in an age-appropriate and entertaining manner.
Science Standards	Take advantage of short video clips from the program, which are aligned with National Science Education Standards.

From the **Teacher Support** menu, you can:

Feature	Description
Science Quiz	Give students a quiz to take independently or as a class. Seven to ten quiz items are aligned with the National Science Education Standards. The items are in multiple-choice or true-false format. Each wrong answer links to a standards-aligned video clip. At the end of the quiz, a scoring function reveals the number of correct initial answers.
Glossary	Check out definitions of key terms and view video clips that reinforce the concepts.
DVD Features	View a quick overview of the features found on the DVD.
Teacher's Guide	Print out or view this comprehensive Teacher's Guide in PDF format.
Internet Link	Link to the Bill Nye area of Disney's Edustation Web site, where you can find links to Internet sites related to the content of each Bill Nye program.

From the **Bonus Materials** menu, you can:

Feature	Description
Bonus Material	Find out what <i>wasn't</i> in the episode! In most cases, there's more of the Way Cool Scientist interview, Bill Nye outtakes, and an extra discussion starter.
Additional Clips	See trailers of related DVDs and videos.
Screen-Saver	Download this cool screen-saver for your computer.

The Planning Process

This Guide provides a Lesson Planning Worksheet (see page 12), which can assist you in setting up your instruction around a topic. The following sections of this Implementation Guide are offered to assist your planning process:

- **Determining Objectives and Linking to Standards**
- **The Learning Cycle**
 - Explore
 - Apply
 - Extend
 - Assess

Determining Objectives and Linking to Standards

1. The NSES Teaching Standard A states that science teachers must “select science content and adapt and design curricula to meet the interest, knowledge, understanding, abilities, and experience of students.”

The NSES recommends that teachers “integrate . . . a practical structure for the sequence of activities, and the content to be learned.” The primary instructional model recommended by the NSES is inquiry into authentic student-generated questions about natural or designed phenomena. Since most state and local standards documents were derived from the NSES, you will find that your local and state standards match closely with content standards in the Bill Nye DVD.

Each DVD contains a menu of clips that are aligned with the NSES. You can review the standards and their aligned clips in the Science Standards menu under Watch Program. Also, the Standards listed on page 10 of this Guide allow you to look at additional NSES content standards that are addressed on the video. Here’s an example of the content standards and clips aligned with the Bill Nye DVD entitled *Blood and Circulation*:

Life Science Standards (NSES) Addressed in *Blood and Circulation*

Life Science:

Structure and function in living systems

- Living systems at all levels of organization demonstrate the complementary nature of structure and function.

Aligned clips:

- 1 Blood vessels
 - 2 Heart pump and bloodstream
 - 3 Heart valves and blood circulation
 - 4 White blood cells
 - 5 Capillaries
- The human organism has systems for digestion, respiration, reproduction, circulation, excretion, movement, control, and coordination, and for protection.

Aligned clips:

- 6 Heart pump
- 7 Heart muscle
- 8 Pumping blood to brain

- Determine your objectives for the lesson and how these objectives address the standards.

Sample Objectives for *Blood and Circulation*

In this activity students will:

- Observe and describe a body system responsible for supply and transport.
- Use this information to define a body system.
- Ask questions about the circulatory system.
- Explain how structure complements function in organs of the circulatory system.
- Cite examples of current research related to this system.

- Design a learning cycle of instructional experiences and assessments for the students to engage in that will help students meet these standards. Students may be given teacher-planned investigations or may be guided to design their own investigations.

The Learning Cycle

The learning cycle is a sequence of activities that involve students in the learning process. The sequence found here is based on research from Lawson, Abraham, and Renner published in 1989. That has been adapted to include: Explore, Apply, Extend and Assess:

Explore: Involves assessing students' prior knowledge and providing opportunities for students to interact with content from the video.

Apply: Includes having students use the content learned during the Explore section in a new way that is meaningful to future learning.

Extend: Allows students to conduct further research around an area of interest within the topic.

Assess: Provides strategies meant to inform students and teachers about the content and processes that have been learned.

Explore

The NSES Teaching Standard B states: "Teachers of science guide and facilitate learning." This standard addresses the constant need to balance your predetermined goals with allowing students to set and meet their own learning goals.

Focus and Support Inquiries: Support student inquiries by making decisions about "when to provide information" and "when to connect students with other sources." Knowing the best time to intervene is often determined by allowing students to ask questions and to explore concepts openly.

The NSES Teaching Standard C states: “Teachers of science engage in ongoing assessment of their teaching and of student learning.”

Assess in Order to Guide Teaching: The Program Overview or the Discussion Starter on the DVD can be used to gauge students’ prior knowledge. You can use student responses to make decisions about appropriate instruction and adaptations in order to meet the needs of individual students. Assessment can be in the form of student reflections from standards-aligned video clips or answers to questions found on the science quiz. Or, as in the following example, a simple graphic organizer can facilitate a formative assessment.

Example: T-Chart from *Blood and Circulation*

1. Ask students to fill out the “Know-New” T-Chart (see page 14). Have them list what they already know about the circulatory system (heart, blood vessels, blood, etc.) on the left side of their charts.
2. Show the Program Overview for *Blood and Circulation*. On the right side of the chart, have students list new things they have learned from watching the clip. Walk around the room and assist students in filling in their T-Charts. Replay the program as necessary to allow students to review sections of interest.
3. Once students have completed their charts, ask them to share what they have listed in the “New” column. Write these on the board. Have students write their own working definitions of the circulatory system. Once students have completed their definitions, collect and review their work to assess prior knowledge.

Conduct direct vocabulary instruction in the Explore phase. Research suggests that:

- Students must encounter words in context more than once to learn them.
- Instruction in new words enhances learning those words in context.
- One of the best ways to learn a new word is to associate an image with it.
- Direct vocabulary instruction on words that are critical to new content produces the most powerful learning.

Use the DVD Glossary with the linked video clips to expose students to new vocabulary words in context, along with associated video images. You can also find a printed version of the glossary terms in this Guide on page 16.

Example: Using the Glossary for Direct Vocabulary Instruction ***Blood and Circulation***

1. Present students with a brief explanation or description of the new term or phrase from the glossary. For example: “Capillary: A small blood vessel that connects arteries and veins.”
2. Present students with a nonlinguistic representation of the new term or phrase. Show the video clip associated with the term “capillary.”
3. Ask students to generate their own verbal description of “capillary.”
4. Ask students to create their own nonlinguistic representation of “capillary.”
5. Periodically ask students to review the accuracy of their explanations and representations. This can be done after the Apply activities.

Apply

Based on the information you gained from the Explore assessments, design appropriate activities for your students. Check the experiments listed in the Episode Guide (see page 11) for explanations of the demonstrations from the Bill Nye program as well as for additional experiments designed to help apply the knowledge gained.

In the following example from *Blood and Circulation*, the standards-based video clips provide background information, and an experiment from the Guide helps students apply what they have learned about arteries and veins.

Example: The Structure and Function of Arteries and Veins

1. Have students begin “Know-New” T-Charts, focusing on what they already know about the structure and function of blood vessels, arteries, and veins.
2. Watch the following chapters from the Bill Nye DVD *Blood and Circulation*:
 - Blood vessels
 - Heart pump and bloodstream
 - Capillaries
3. Complete the “Know-New” T-Charts.
4. Give students copies of the Student Recording Sheet (see page 15) and have them fill the sheets out as they conduct their experiments.
5. Do the experiment entitled “Pump it Up!” from the *Blood and Circulation* Episode Guide, in which students observe the apparent effects of pressure on arteries and veins.
6. Write down any remaining questions about the structure and function of blood vessels, arteries, and veins.

Extend

The NSES Teaching Standard D states: “Teachers of science design and manage learning environments that provide students with the time, space, and resources needed for learning science.” School administrators, parents, and the community can assist teachers in providing local resources that make science lessons pertinent and meaningful.

Identify and Use Resources Outside of the School: “The school science program must extend beyond the walls of the school.” Each Bill Nye DVD contains resources designed to facilitate such understanding, including:

- Way Cool Scientist, found in both Watch Program and Bonus Materials, in which scientists discuss their current areas of study. This real-world connection often results in a deeper student understanding of a particular career.
- Disney’s Edustation Web site, where relevant Internet links provide a starting point for students to further explore science topics.
- Try these video clips, with activities parents and students can do at home. The questions generated by students from these experiences can be used as foundations from which they may conduct their own research.
- Standards-aligned video clips and Bill’s demonstration video clips, which can help generate topics for further research. After viewing the clips, have students list their questions, perhaps about the most current developments in a topic. By conducting online or library research, students will find answers to their questions and will learn about a topic in greater depth.

Example: Conducting Student Research Using *Blood and Circulation*

Ask students to choose one of the questions they had after completing the activities from *Blood and Circulation*. An example of a student research question might be, “How has the technology related to artificial hearts advanced in the last ten years?” Explain to students that they will be conducting research to find answers to their questions. Some students may want to complete online or library research, others may want to ask an expert in the field, while others may want to design and conduct a scientific investigation. Encourage students to write a detailed procedure for finding answers to their questions. Ask students to find one or more examples of current research dealing with the circulatory system that is related to their question. NOTE: Students with similar questions may work together to complete the assignment.

Assess

Once students have conducted the research, you may choose to assess them in a number of different ways:

- By having students write about what they learned in a journal.
- By having students submit projects or reports.
- By having students take the program quiz to gauge their understanding of certain facts in the video. You can either print the quiz (found in this Guide on page 18) and have each student complete it individually or use the DVD screen version and the scoring feature for whole-class assessment.
- By designing other standards-aligned questions to augment those that are provided.

While the quiz will provide you with information about what the students have learned, it does not assess how students have processed the information. Below you will find assessment ideas that can be used to measure both content and process.

A Sample Assessment for *Blood and Circulation*

1. Explain to students that an important aspect of scientific inquiry is to communicate findings to others. In this assessment, students will present the following information to their peers:
 - The question they investigated.
 - The method that was used to find answers to their question.
 - Problems or successes during the search.
 - Answers to their question.
 - Current research related to their question.
 - New questions that have arisen.
2. Distribute the rubric found in the Lesson Planning Worksheet (see page 13) to students so they know how they will be assessed. Make sure students understand the criteria found in the rubric. Before you begin, you may want to allow students to make changes to the rubric so that it is clearer or makes more sense from their perspectives.
3. Allow students time to gather information to answer their questions and to prepare for their presentations. As students conduct this work, walk around the room and ask questions to assess their progress and provide input as needed.
4. Take a few minutes to clarify the rules of the presentation with the students. You may want to have multiple copies of the rubric available so that peers can rate the presentations.
5. As presentations are made, assess the quality of the student's work as thoroughly and as equitably as you possibly can.

Congratulations! You have now completed the steps to set up a lesson plan using the Lesson Planning Worksheet. You have also explored many of the features of the Bill Nye DVD as well as the supplemental information found in this Teacher's Guide. And most important, you've made significant strides toward incorporating DVD technology into your day-to-day instruction.

National Science Education Standards

Gravity

Standards/Benchmarks

Science as Inquiry

Understandings about scientific inquiry

- Different kinds of questions suggest different kinds of scientific investigations. Some investigations involve observing and describing objects, organisms, or events; some involve collecting specimens; some involve experiments; some involve seeking more information; some involve discovery of new objects and phenomena; and some involve making models.

Physical Science

Motions and forces

- The motion of an object can be described by its position, direction of motion, and speed. That motion can be measured and represented on a graph.
- An object that is not being subjected to a force will continue to move at a constant speed and in a straight line.
- If more than one force acts on an object along a straight line, then the forces will reinforce or cancel one another, depending on their direction and magnitude. Unbalanced forces will cause changes in the speed or direction of an object's motion.

Earth and Space Science

Earth in the solar system

- The earth is the third planet from the sun in a system that includes the moon, the sun, eight other planets and their moons, and smaller objects, such as asteroids and comets. The sun, an average star, is the central and largest body in the solar system.
- Gravity is the force that keeps planets in orbit around the sun and governs the rest of the motion in the solar system. Gravity alone holds us to the earth's surface and explains the phenomena of the tides.

Science and Technology

Understandings about science and technology

- Many different people in different cultures have made and continue to make contributions to science and technology.

History and Nature of Science

History of science

- In historical perspective, science has been practiced by different individuals in different cultures. In looking at the history of many peoples, one finds that scientists and engineers of high achievement are considered to be among the most valued contributors to their culture.
 - Tracing the history of science can show how difficult it was for scientific innovators to break through the accepted ideas of their time to reach the conclusions that we currently take for granted.
-

Episode Guide

Gravity

Nifty Questions in This Episode

Awesome Answers

What makes the Earth go around the sun?

Gravity keeps the Earth revolving around the sun.

What is gravity?

Gravity is a force that pulls everything (air, water, earth) toward the center of the Earth.

If a bowling ball and an apple are dropped at the same time from 20 meters up, which will hit the ground first?

Both the bowling ball and the apple will hit the ground at the same time.

Would there be a sky without gravity?

No! Gravity is what holds the atmosphere around the Earth.

Experiments shown on the video:

NEWTON'S APPLE

Objective: To make a model of how the Earth travels around the sun.

- Roll a sock into ball (the Earth).
- Wrap the sock with string (Earth's gravity).
- Thread the loose end of the string through an empty toilet paper roll.
- Tie the loose end of the string to a plastic bag containing an apple (the sun).
- Hold the paper roll with your hand.
- Raise your hand above your head and move your hand in a counterclockwise motion.
- The sock (Earth) will move around the apple (sun).

More interesting stuff to do:

SWING STRING

Objective: To determine if the weight of an object (mass) and its string length (pendulum) will pass a midpoint at the same duration of time and speed.

- Cut two pieces of string, each 1 meter long; tape one string to a glass marble and the other to a steel ball.
- Tape the loose end of the string attached to the steel ball to the top of a door opening.
- Pull the steel ball back 10 centimeters and release.
- Record how many seconds it takes for ten complete swings (one complete swing equals the ball returning to the starting point once).
- Use the same procedure as in the 10-centimeter trial, but this time pull the string back 20 centimeters and release.
- Compare both trials and write a conclusion.
- Now tape the loose end of the string attached to the glass marble to the top of the same door, 30 centimeters away from the steel ball. Make sure the strings are the same length.
- Repeat the 10-centimeter trial for the glass marble and record the number of seconds.
- For the last test, shorten the strings on the steel ball and glass marble to one-half meter.
- Repeat the 10-centimeter and 20-centimeter trials. Record all results.

PUSH ME, PULL ME

Objective: To demonstrate the effect of gravity on moving objects.

- Sit on a tall stool with a 360-degree rotating seat.
- Lift your feet off the floor and keep your knees together.
- Place both hands on your chest.
- Have a partner spin you on the stool (not too fast).
- Stick your feet straight out in front of you while spinning; at the same time, extend your arms straight out to your sides.
- Pull your arms and feet back in to your body. Continue spinning and repeat the procedure for a few times.
- Try different combinations of feet and arms. Experiment!
- Are you experiencing centripetal or centrifugal force . . . or both?

Assess

As presentations are made, assess the quality of the student's work as thoroughly and as equitably as you possibly can. The following criteria can be used to assist in your assessment.

Name of Student _____

Question Investigated _____

Initial Question			
1 Question is broad and not well defined	2 Question is defined but limited to single-answer responses.	3 Question is clear and might elicit multiple responses that may lead to new ideas and additional questions.	4 Question is engaging and provokes new ways of thinking about an issue.
Methods for Finding Answers			
1 Students do not share planned or actual methods.	2 Students share methods but they are unclear or vague.	3 Students share methods but not the problems or successes of using the methods.	4 Students share methods and problems or successes in using the methods.
Results			
1 Student results are undefined.	2 Student results are incomplete and do not adequately answer the question.	3 Student results are complete, adequately answer the question, and include current research related to the question.	4 Student results are complete, include current research, and have resulted in one or more additional questions.
Communication			
1 Student is not prepared to speak.	2 Presenter has distracting mannerisms and avoids eye contact with the audience.	3 Presentation is clean and clear with some eye contact and very few distractions.	4 Presentation is exceptional and unique. Presenter uses regular eye contact and avoids distractions.

Glossary

Gravity

Fold and cut to use as flashcards.

Bill Nye the Science Guy

GRAVITY

Gravity

The force of attraction between all masses in the universe, especially the attraction of the Earth's mass for bodies near its surface.

Bill Nye the Science Guy

WEIGHT

Weight

Refers to the vertical force exerted by a mass. This force is the result of gravity.

Bill Nye the Science Guy

MASS

Mass

The property of a body that causes it to have weight in a gravitational field.

Fold and cut to use as flashcards.

Bill Nye the Science Guy

ORBIT

Orbit

The path taken by one celestial body in its revolution about another.

Bill Nye the Science Guy

SOLAR SYSTEM

Solar System

Includes the sun with the celestial bodies that revolve around it in its gravitational field.

Date _____

Quiz

Gravity

True or False? Circle T or F

1. Gravity can either pull or push. T or F
2. Earth's gravity causes a bowling ball to fall to the ground faster than an apple. T or F
3. The Earth is too far from the sun to feel the sun's gravitational attraction. T or F
4. Our weight is the combination of our mass, the Earth's mass, and gravity. T or F
5. Gravity is the force that keeps all the solar system planets in orbit. T or F
6. Planets are not pulled into the sun because they are moving. T or F
7. Planets are shaped like balls because of gravity. T or F

Multiple Choice: Circle the letter of the best answer

8. Which of the statements below is correct regarding the gravity of the Earth? The Earth's gravity...
 - A. Always pulls us toward the center of the Earth.
 - B. Pulls on the oceans on the Earth's surface.
 - C. Pulls on the gases in the Earth's atmosphere.
 - D. All of the above
9. Aeronautical engineers have to consider the weight, thrust, lift, and drag of an airplane to determine whether or not...
 - A. It can take off at a specified time and place.
 - B. It can move away from the gate at the airport.
 - C. It can taxi out to the take-off strip.
 - D. None of the above
10. Which of the following statements regarding your weight on Earth, the moon, and Jupiter is correct? You would weigh more on...
 - A. The moon than on Earth.
 - B. The Earth than on Jupiter.
 - C. Jupiter than on the Earth.
 - D. The moon than on Jupiter.
