

Illuminated Mirror Owner's Manual

Diamond COLLECTION®

# Congratulations on your new Diamond X Mirror!

We hope you will enjoy your new mirror for many years to come.

# **BEFORE YOU INSTALL**

Please read the following advice on breakages and returns

Dear valued Diamond X Mirror owner,

We do ask you kindly to read these important notes.

#### 1) Check your mirror

Please check your product thoroughly for breaks, damages or defects that may have happened in transit **before** mounting to the wall or fixing to the base/feet (for tabletop versions). As soon as you have mounted the mirror, your claim for damages will not be warranted. It's not that we want to be awkward, but as you can imagine, it's impossible to get the courier company to warrant our insurance claim after a customer or electrician has fitted the mirror.

#### 2) Do not install if damaged

Once the mirror has been installed on the wall, we cannot accept returns (unless, of course, the mirror develops a fault after that time). Please inspect and test your mirror before installing it. If it does not meet your expectations, the mirror may be sent back for a refund.

#### 3) Returning a product

If you wish to return your product, please follow the instructions in your confirmation email. You will need to complete an online returns form to initiate the return. Full details may be found on the vendor's website. Alternatively, call customer services using the number on the website.

# Important information

## Electrician installation only

This product should only be installed by a fully qualified electrician in accordance with the current IEE wiring regulations (UK) or the equivalent national wiring regulation outside of the UK. This light fitting is a Class I product and therefore must be earthed. Always switch off the electricity supply at the mains before and during installation of this product.

## **Electrocution Warning**

To avoid the risk of electrocution, please turn off the mains electricity supply before commencing installation.

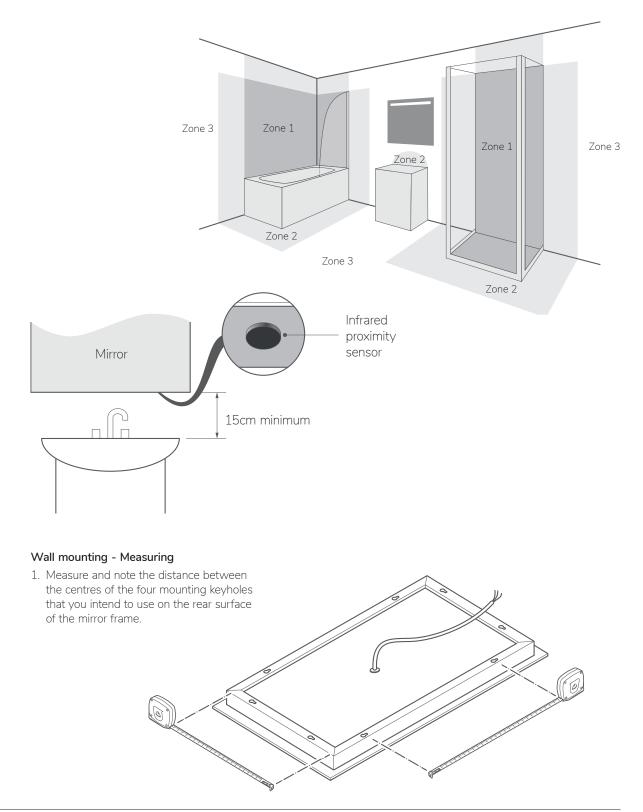

# Installation

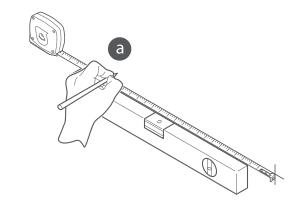

## Positioning

This product is rated IP44 so can be fitted in bathroom zones 2 and 3. Position the mirror in a suitable location with at least 15cm clearance between the infrared proximity sensor and the nearest surface and according to the zone diagram shown below, ensuring that the domestic electrical mains supply is within reach of the electrical entry point of the product.

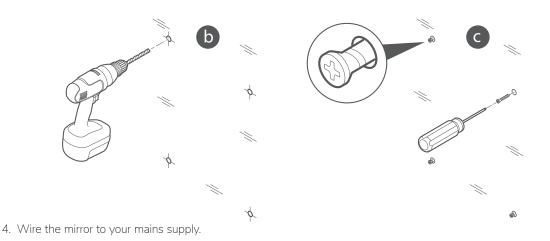

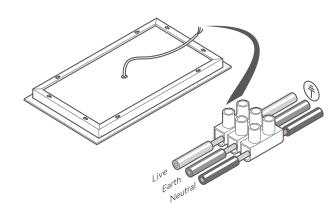

2. Determine the location of the mirror and using a spirit level, mark the hole locations on the wall (a).

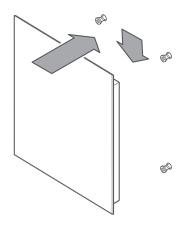

3. Using an appropriate drill bit for your wall, drill the four mounting holes and fit wall plugs (b). The plugs supplied with the mirror are suitable for brick walls only. If in doubt please consult your local DIY store for advice on suitable alternative fixings. Fix the mounting screws to the wall ensuring that they are left protruding enough to mount the mirror (c).

5. Carefully hang the mirror on the four protruding mounting screws. The keyholes will allow the mirror to drop into place. The screwheads will keep the mirror firmly attached to the wall.

#### Wall mounting - Template (selected models)

Some models are supplied with a drilling template for easy fitting.

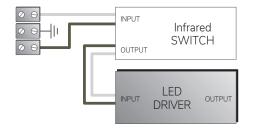

- 1. Position the template using a spirit level to ensure it is level and tape in place (using decorators tape that will not mark your wall.
- 2. Drill through the template and discard. Complete installation following steps 3-5 detailed above.

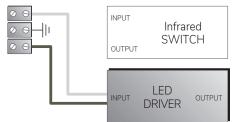

# Connecting to bathroom lights (Optional)

If required, a qualified electrician can connect your mirror to the bathroom lighting circuit so that the mirror is operated using the same switch as the main bathroom lights. The following diagram shows how the infrared switch may be bypassed.

Infrared switch ON/OFF (as supplied)

Controlled by bathroom lighting circuit

# Operating instructions

#### 1. Switching on and off using the infrared sensor

Our mirrors include an infrared proximity sensor to control the main mirror lights. Wave your hand across the sensor, and it will power up the mirror lights and demister pad. Repeat the action to turn them off again.

#### 2. Selectable cool white/warm white (model-dependent)

A 3-position rocker switch controls the LEDs' operation and colour temperature. The centre position turns the lights off. Moving the rocker to the side of the centre will select either warm white (3000°K) or cool light (5000°K) LED colour.

#### 3. Shaver socket

Our shaver mirrors include a 240 Volt shaver socket to power electric shavers or toothbrushes. A dedicated on/off rocker switch controls power to the shaver socket. The socket operates independently from the mirror lights and demister pad.

#### 4. Additional Aura ambient underlighting (model-dependent optional extra)

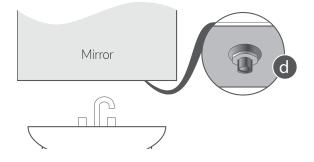

Single-colour and white ambient underlighting models use the infrared proximity sensor to operate underlighting. The main mirror lights, demister pad and underlighting, turn on and off together. The main mirror lights can be switched off independently from the Aura ambient underlighting.

### 5. Additional Aura colour-change lighting (optional extra)

Single colour lights, dimming and lighting programs are all controlled using the remote control supplied. The Aura colour-change lighting system will only operate if the main mirror lights are turned on using the infrared proximity sensor.

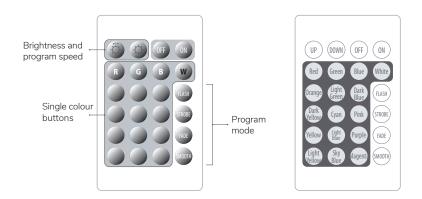

Point your remote towards the small black receiver located on the bottom of the mirror frame (d) and press the "ON" button. Select a static colour option from the keypad by pressing the appropriate colour button. You can also adjust the brightness by pressing the "UP" and "DOWN" buttons.

Four "MODE" buttons are used to access the lighting programs described in the table below. Point your remote towards the black sensor and select the required function and click once. The speed of the transitions can be increased or decreased by pressing the "UP" or "DOWN" buttons. Select a static colour option from the keypad by pressing the appropriate colour button to cancel the program.

MODE	DESCRIPTION
FLASH	Flashes between 7 colours
STROBE	Strobes the chosen single colour
FADE	Fades the single colour, on and off.
SMOOTH	Fades between red, green and blue.

#### 6. X-Audio Bluetooth (optional extra)

To activate your mirror's Bluetooth audio system, turn on the shaver socket rocker switch. You will hear an activation tone coming from the speakers.

The mirror will automatically become available for pairing, appearing as "Diamond X" on your mobile phone's Bluetooth "available devices" list. Depending on your device and settings, subsequent pairing will be automatic.

# Care and cleaning

Do not use abrasive materials to clean the mirror as they will damage the finish.
