Department of: MECHANICAL ENGINEERING

Year and Semester to Whom Subject is offered: II Year B.Tech. II Semester

Name of the Subject: MACHINE DRAWING

Name of the Faculty: K. VIJAY

Designation: Asst.Professor

Department: Mech. Engg.

INDEX

1.1. Introduction to the subject

- 1.2. Pre-requisite/Co-requisite/Exclusion
- 1.3. Objectives of the subject
- 1.4. Outcomes of the subject
- 1.5. Teaching/Learning Methodology
- 1.6. JNTU Syllabus with Additional Topics
- 1.7. Unit wise Summary
- 1.8. Micro Plan
- 1.9. Time Table
- 1.10. Student list
- 1.11. Quality Control Sheets
- 1.12. Assignment questions, University Quiz and Regular examination question papers
- 1.13. Course Plan
- 1.14. Tutorial Sheets
- 1.15. Lecture Notes
- 1.16. Closure Report

1.1. COURSE DESCRIPTION

Machine drawing is used to communicate the necessary technical information required for manufacture and assembly of machine components. These drawings follow rules laid down in national and International Organizations for Standards (ISO).

Hence the knowledge of the different standards is very essential. Students have to be familiar with industrial drafting practices and thorough understanding of production drawings to make themselves fit in industries. The following topics have been covered to fulfill the above objectives.

Classification of Machine Drawings, Principles of Drawings, Sectioning, Dimensioning, Limits, Fits and Tolerance, Symbols and Conventional Representation, Screw Fasteners, Key Joints, Coupling and its Types, Riveted Joints, Welded Joints, Structural Applications, Assembly Drawings, Production Drawings, Reproduction of Drawing, Introduction of Computer Aided Drafting, Introduction of Solid 3D Modeling.

Introduction to the subject

In our daily life, we come across a wide array of machines. It can be a sewing machine, a cycle or a motor car. Power is produced by the engine which makes use of a mechanism called slider crank mechanism. It converts reciprocating motion of a piston into rotary motion of the crank. The power of the engine is transmitted to the wheels with the help of different mechanisms. If you visit LPG gas filling plant or a bottling plant almost all the functions are done by making use of mechanisms. These are only few examples. Generally, manual handling in industries has been reduced to the minimum. In engineering, mechanisms and machines are two very common and frequently used terms. We shall start with simple definition of these terms.

I.3. Pre-requisites

• Engineering Drawing

1.4. Objectives of the Machine Drawing

Student will get methodically and well thought out presentation that covers fundamental issues common to almost all areas of machine drawing.

- 1. Students have an ability to apply knowledge of Modeling, science & engineering.
- 2. Student can modeled this drawing even in CAD/CAM software by applying the basic knowledge of machine drawing.
- 3. Students will able to demonstrate an ability to design and conduct experiments, analyze and interpret data and assembly and disassembly drawings knowledge will be provided.

I.5.Outcomes of the subject

- Analysis of complex design systems related to mechanical Engineering.
- Making use of appropriate laboratory tools and design innovative methods.
- To motivate students to develop new innovative methods for measuring product Characteristics.
- To enhance the ability of students to work as teams.

- To enhance the ability to work as practicing mechanical engineers in manufacturing Industries and consulting firms.
- Improving skills to adopt modern methods in mechanical engineering as continuous improvement
- The broad education necessary to understand the impact of engineering solutions in a global, economic, environment and societal context.

1.6. Teaching/Learning Methodology

A mixture of lectures, tutorial exercises, and case studies are used to deliver the various topics. Some of these topics are covered in a problem-based format to enhance learning objectives. Others will be covered through directed study in order to enhance the students' ability of "learning to learn." Some case studies are used to integrate these topics and thereby demonstrate to students how the various techniques are inter-related and how they can be applied to real problems in an industry.

1.5. JNTU Syllabus

MACHINE DRAWING

Machine Drawing Conventions :

Need for drawing conventions - introduction to IS conventions

a) Conventional representation of materials, common machine elements and parts such as screws, nuts, bolts, keys, gears, webs, ribs.

b) Types of sections – selection of section planes and drawing of sections and auxiliary sectional views. Parts not usually sectioned.

c) Methods of dimensioning, general rules for sizes and placement of dimensions for holes, centers, curved and tapered features.

d) Title boxes, their size, location and details - common abbreviations & their liberal usage

e) Types of Drawings - working drawings for machine parts.

I. Drawing of Machine Elements and simple parts

Selection of Views, additional views for the following machine elements and parts with every drawing proportions.

a) Popular forms of Screw threads, bolts, nuts, stud bolts, tap bolts, set screws.

b) Keys, cottered joints and knuckle joint.

c) Rivetted joints for plates

d) Shaft coupling, spigot and socket pipe joint.

e) Journal, pivot and collar and foot step bearings.

II. Assembly Drawings:

Drawings of assembled views for the part drawings of the following using conventions and easy drawing proportions.

a) Engine parts - stuffing boxes, cross heads, Eccentrics, Petrol Engine connecting rod,

piston assembly.

b) Other machine parts - Screws jacks, Machine Vices Plummer block, Tailstock.

c) Valves : Steam stop valve, spring loaded safety valve, feed check valve and air cock

1.7.3. Websites:-

*TA will be based on the Assignments given, Unit test Performances and Attendance in the class for a particular student.

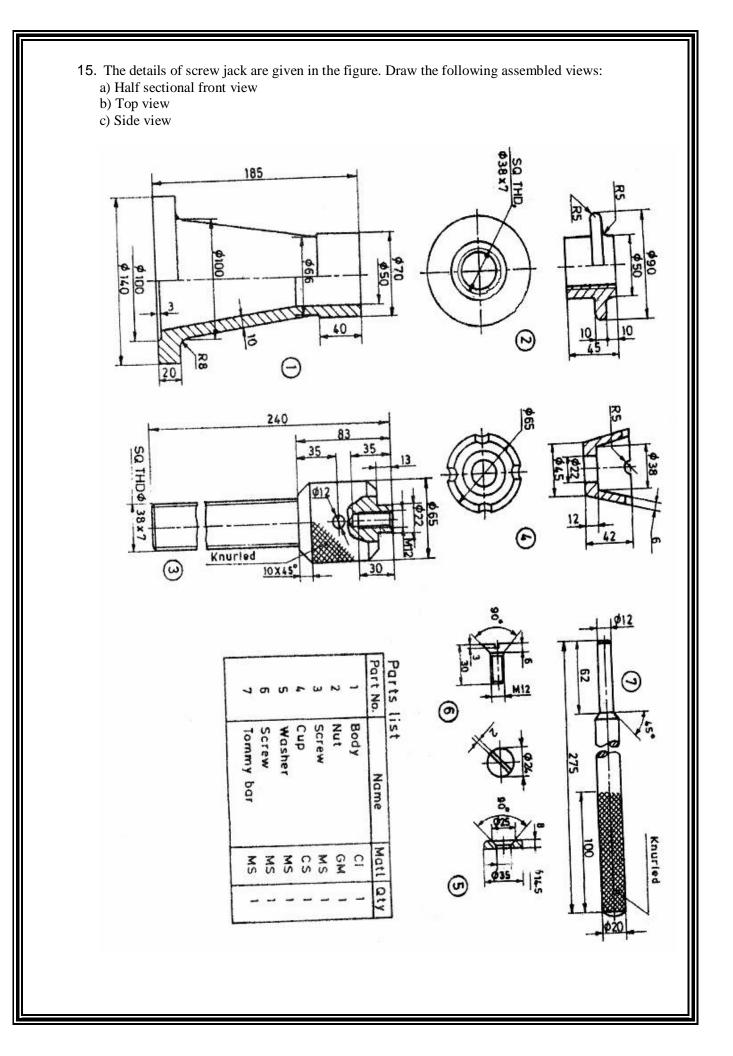

CHEERYAL (V), KEESARA (M), R.R. DIST. 501 301

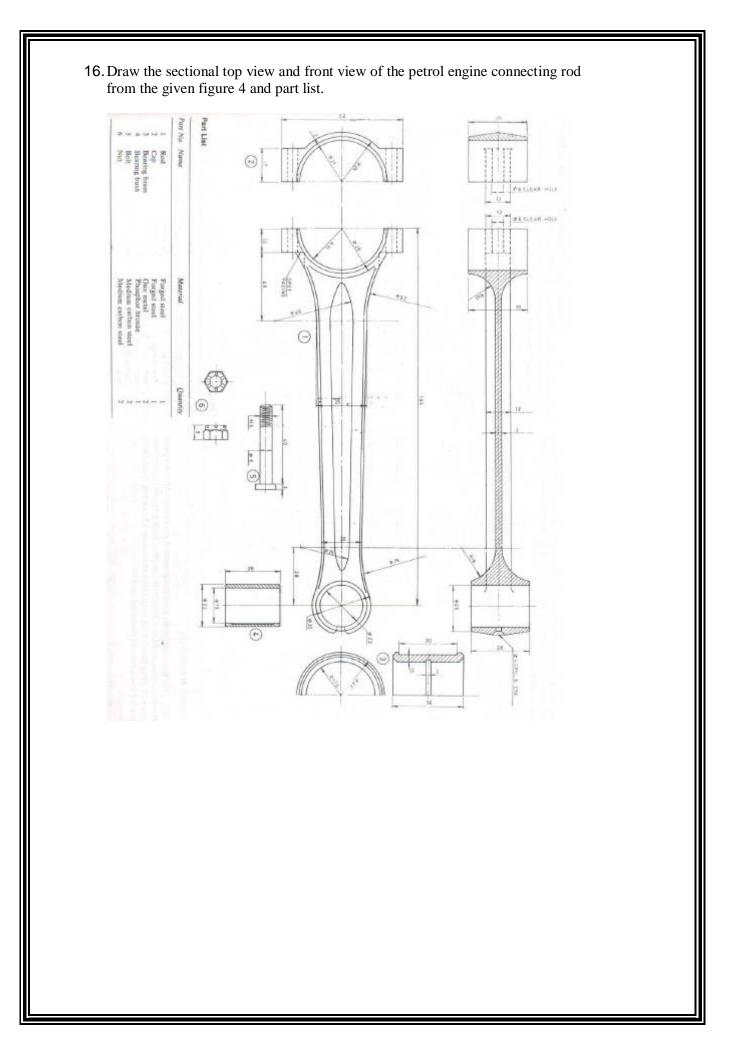

DEPARTMENT OF MECHANICAL ENGINEERING

SUBJECT: MACHINE DRAWING

ASSIGNMENT QUESTIONS

- 1. Draw the thread profiles of square thread and ACME thread.
- 2. Draw the Rag foundation bolt with D = 30mm.
- 3. Draw sectional front view and top view of single row combined lap and butt joint with D = 20 mm of rivet.
- 4. Draw any four types of machine and cap screws.
- 5. Draw sectional front view and right side view of the protective flanged coupling with shaft dia as 30 mm.
- 6. Draw sectional front view and top view of the triple riveted butt joint with double straps(zig zag type) with dia of Rivet as 18 mm.
- 7. Draw hexagonal headed bolt and nut with dia of bolt as 30 mm.
- 8. Draw two views of bushed types flanged coupling with D=30 mm.
- 9. Draw the sectional front view and top view of the double riveted double strap zig zag butt joint with dia of the rivet as 14 mm.
- 10. Draw sectional front view and right side view of compression type as muff coupling with dia of shaft as 25mm.
- 11. Draw the sectional front view and top view of the double riveted double strap zig zag butt joint with dia of the rivet as 14 mm.
- 12. Sketch the schematic representation of threaded parts.
 - a) V threads
 - b) Square threads.
- **13**. Draw plan and sectional elevation of double riveted zig zag lap joint to join two plates of 10 mm thickness.
- 14. Draw proportionate diagram of Sleeve and cotter joint to connect two shafts of Ø 30mm.

17. Draw the sectional front view (left half in section) and right side view of the assembled stuffing box from the given figure 4 and part list.
