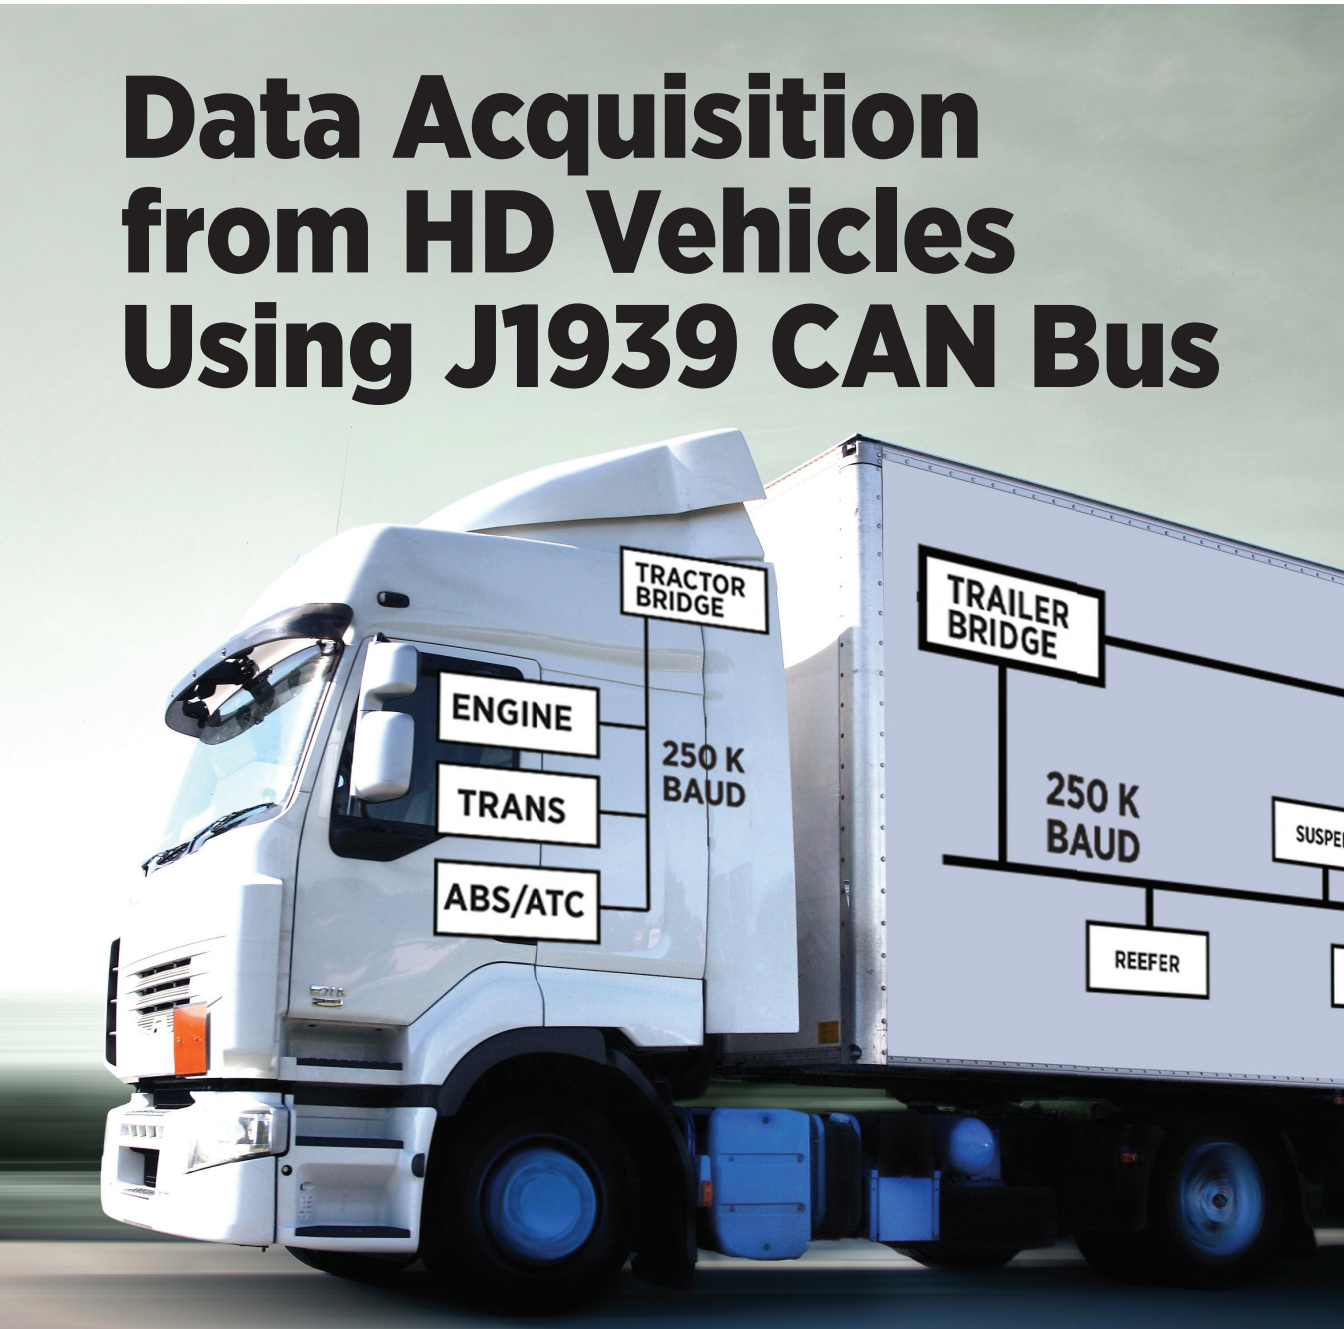
SAE INTERNATIONAL

AUTOMOTIVE

Data Acquisition from HD Vehicles Using J1939 CAN Bus



Richard P. Walter
Eric P. Walter

Table of Contents

Chapter 1 Benefits and Applications of the In-Vehicle Network for Data Acquisition 1

1.1 Overview—Data Gold Mine 1
1.2 Focus and Assumptions of This Book 2
1.3 Access to the Data 2
1.4 Normal and Requested Messages 2
1.4.1 Normal Messages 2
1.4.2 Requested (Diagnostic/Polled/Event) Messages 3
1.4.3 Requested Versus Normal Messages 3
1.5 Comparing Light- and Heavy-Duty Vehicle Designs 3
1.6 Medium-Duty Vehicles 5
1.7 Applications 5
1.8 How to Use This Book 5
References 6

Chapter 2 Comparison with Traditional Data Acquisition 7

2.1 Acquiring Data with Our Own Sensors 7
2.2 In-Vehicle Network Data 8
2.3 Acquiring Parameters from the Network 9
2.4 Complications of Network Versus Direct Sensors 9

Chapter 3 Binary, Hex, Bits, and Bytes 11

3.1 Introduction to Bits, Binary, and Hexadecimal Conventions 11
3.2 Hexadecimal Designations 12
3.3 Introduction to Bits and Bytes 12
3.4 11- and 29-Bit CAN IDs 12
3.5 Data Conventions 13
3.5.1 Conversion Format 13
3.5.2 Byte Format 13
3.5.3 Byte Order 14

Chapter 4 Controller Area Network (CAN) Protocol 17

4.1 What is CAN? 17
4.2 What Does CAN Define? 19
4.2.1 Layer 1—Physical Layer 19
4.2.2 Level 2—Data Link Layer 20
4.3 Applications of CAN 22
4.4 CAN on Light-duty Vehicles Using ISO 15765 23
References 23

Chapter 5 J1939 Standard Overview 25
5.1 Introduction 25
5.2 Previous In-Vehicle Network Standards (J1708 and J1587) 27
5.3 J1939 Overview and Industry-Specific Standards 28
5.3.1 J1939 – Top-Level Document 28
5.3.2 J1939DA – Digital Annex 29
5.3.3 J1939/01 – On-Highway Equipment Control and Communication Network 29
5.3.4 J1939/02 - Agricultural and Forestry Off-Road Machinery Control and Communication Network 30
5.3.5 J1939/05 Marine Stern Drive and Inboard Spark-Ignition Engine On-Board Diagnostics Implementation Guide 31
5.4 J1939/7x – Background Application Standards 31
5.4.1 J1939/74 – Application Configurable Messaging 31
5.4.2 J1939/75 – Generator Sets and Industrial 32
5.5 J1939/8x 32
5.5.1 J1939/81 – Network Management 32
5.5.2 J1939/82 – Compliance—Truck and Bus 33
5.6 Most Important J1939 Standards 34
References 34

Chapter 6 J1939 Lower Layer Specifications 35
6.1 Physical Layer 35
6.1.1 J1939/11—Physical Layer—250 kbits/s, Shielded Twisted Pair 35
6.1.2 J1939/13—Off-Board Diagnostic Connector 36
6.1.3 J1939/14—Physical Layer, 500 kbits/s 38
6.1.4 J1939/15—Physical Layer, 250 kbits/s, Unshielded Twisted Pair 38
6.2 Data Layer 38
6.2.1 J1939/21—Data Link Layer—Message Format 39
6.2.2 J1939/21—Data Link Layer—Transmitting Messages 44
6.2.2.1 Broadcast Announce Message (Global) 45
6.2.2.2 Broadcast Long Message Example: PGN-FEE3 (65251)—Engine Configuration 45
6.2.2.3 Connection Management (Targeted) 45
6.2.2.4 Request Messages 46
6.3 Network Layer (J1939/31) 46
References 49

Chapter 7 Application Layer (J1939/71) 51
7.1 PGNs and SPNs 51
7.2 J1939 Message Data Format 53
7.3 Scaling Information 54
7.4 Transmission Rate 55
7.5 Digital Annex (J1939DA) 55

7.6 Logging J1939 Data with a Test Tool 55
7.6.1 Example J1939/71 Database Editor 56
7.6.2 Selecting Parameters to Acquire 57
7.6.3 Finding Available Parameters 57
7.6.4 Sorting by Name, Unit, or PGN 58
7.6.5 Defining the Acquisition Rate and Source Address 58
7.6.6 Importing Proprietary Messages 58
7.7 Sample J1939 Message File 58
References 60

Chapter 8 Diagnostics (J1939/73) 61

8.1 Overview 61
8.2 Diagnostic Messages 62
8.3 Diagnostic Trouble Codes 64
8.3.1 Lamp Status (First Byte) 64
8.3.2 Second Byte 65
8.3.3 HD DTC Parameters (Bytes 3 through 6) 65
8.3.3.1 Suspect Parameter Number 65
8.3.3.2 Failure Mode Identifier 65
8.3.3.3 Occurrence Count 66
8.3.3.4 SPN Conversion Method 66
8.3.4 Controller ID 66
8.3.5 Example 66
8.3.6 Multiple DTCs Reported 67
8.4 Comparing HD OBD with LD OBD-II 68
8.5 Targeted or Global Requests 69
References 70

Chapter 9 Heavy-Duty On-Board Diagnostic (HD-OBD) 71

9.1 Introduction of OBD 71
9.2 Worldwide Harmonized On-Board-Diagnostics (WWH-OBD) 72
9.3 J1939/03 On-Board Diagnostics Implementation Guide 73
9.4 J1939/84 OBD Communications Compliance Test Cases for Heavy-Duty Components and Vehicles 73
9.5 Comparing LD with HD-OBD 74
9.5.1 Comparing HD and LD Standards 74
9.5.2 Comparing HD and LD Approaches 74
9.5.3 Comparing HD Messages with LD Test Modes 75
9.6 Example Fault Codes 76
9.6.1 Example Fault Codes Using J1979 for OBD-II 77
9.6.2 Example Fault Codes Using UDS ISO 14229 for EOBD 78
9.6.3 Example Fault Codes Using J1939 80
9.6.4 Example Fault Codes Using WWH-OBD 80
References 83

Chapter 10 Examples of J1939 Data 85
10.1 Sample J1939 Message File 85
10.2 Debugging Controllers and Reverse Engineering non-Standard J1939 Messages 86
10.3 Example Scaled Engineering Data 89
10.4 Web-Based Dashboards and Example Applications 92
10.4.1 Fleet Data 92
10.4.2 Diagnostics and Alerts 93
10.4.3 Diagnosing Intermittent Problems 94
10.4.4 Fuel Economy 96
10.4.5 Duty Cycle and Drive Cycle Analysis 97
References 97

Chapter 11 Data Storage and Transfer 99
11.1 File Size 99
11.1.1 Estimating File Size 99
11.1.2 File Format and Compression 100
11.2 Data Transfer Options and Data Rates 100
11.2.1 WiFi 101
11.2.2 Cellular 102
11.2.3 Bluetooth 102
11.2.4 USB 102
11.3 Real-Time Data Versus Logging 103
11.3.1 Real-Time Data 103
11.3.2 Logging 103
11.3.3 Acquisition, Storage, Display, and Analysis Trade-Offs 104

Appendix A Abbreviations 105
