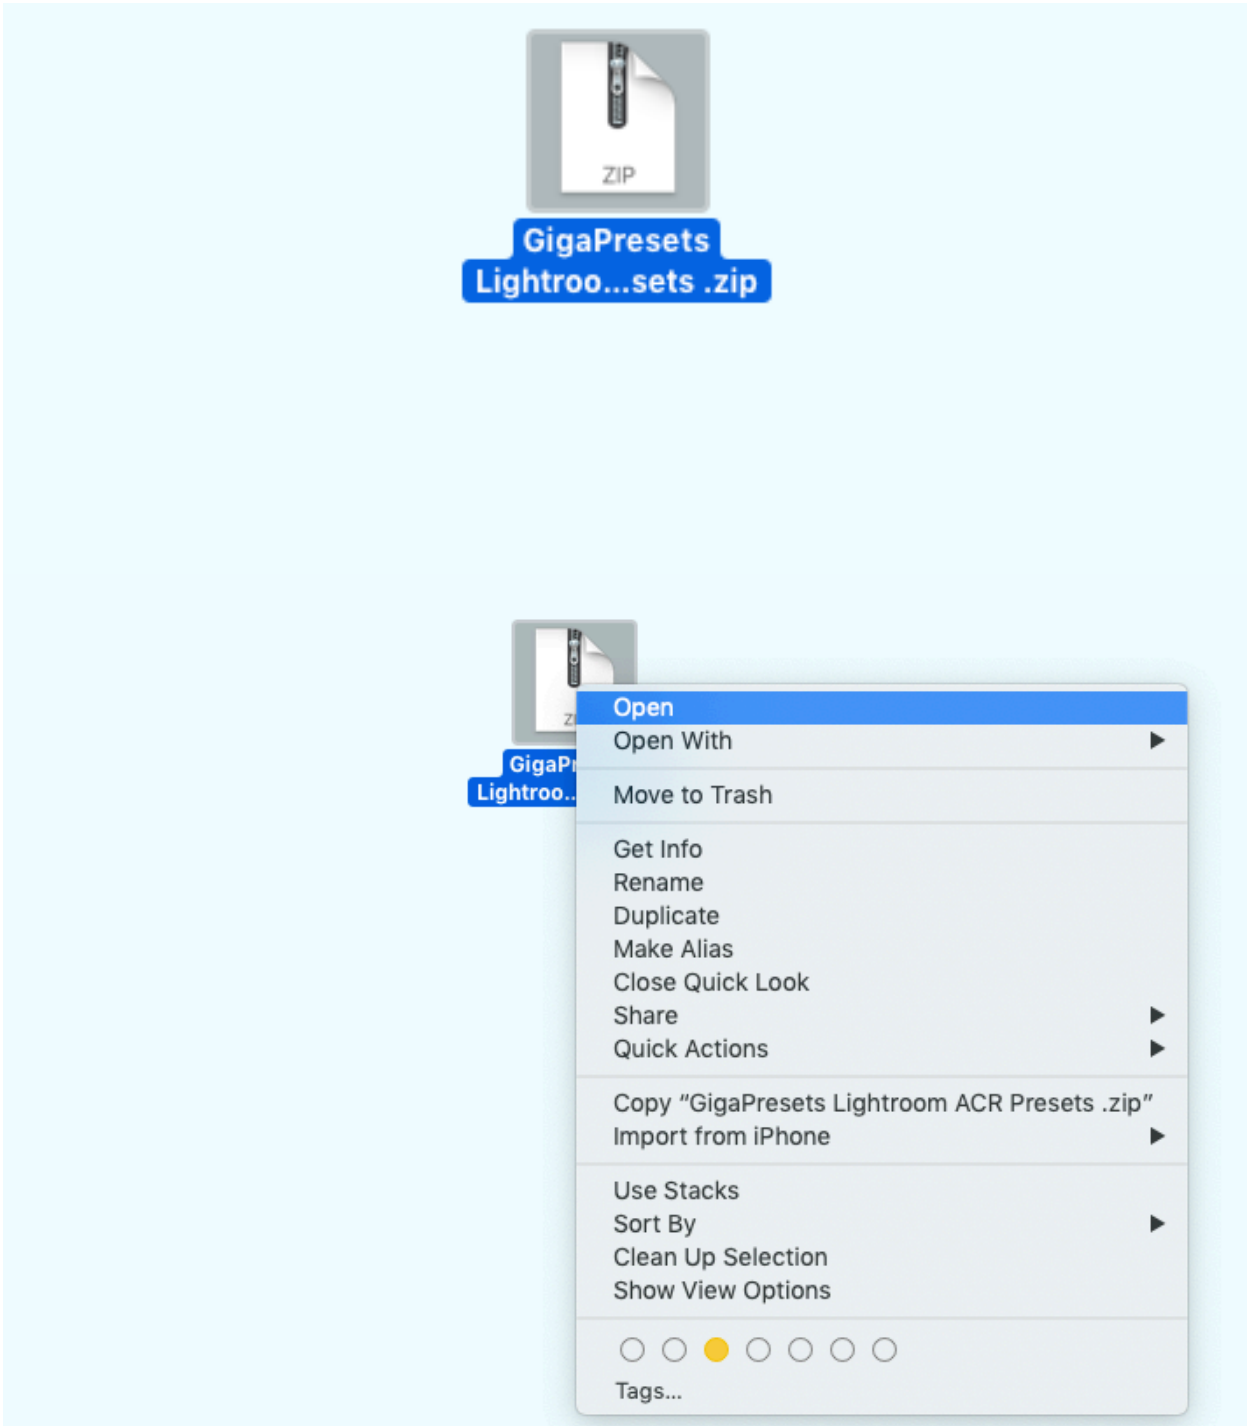
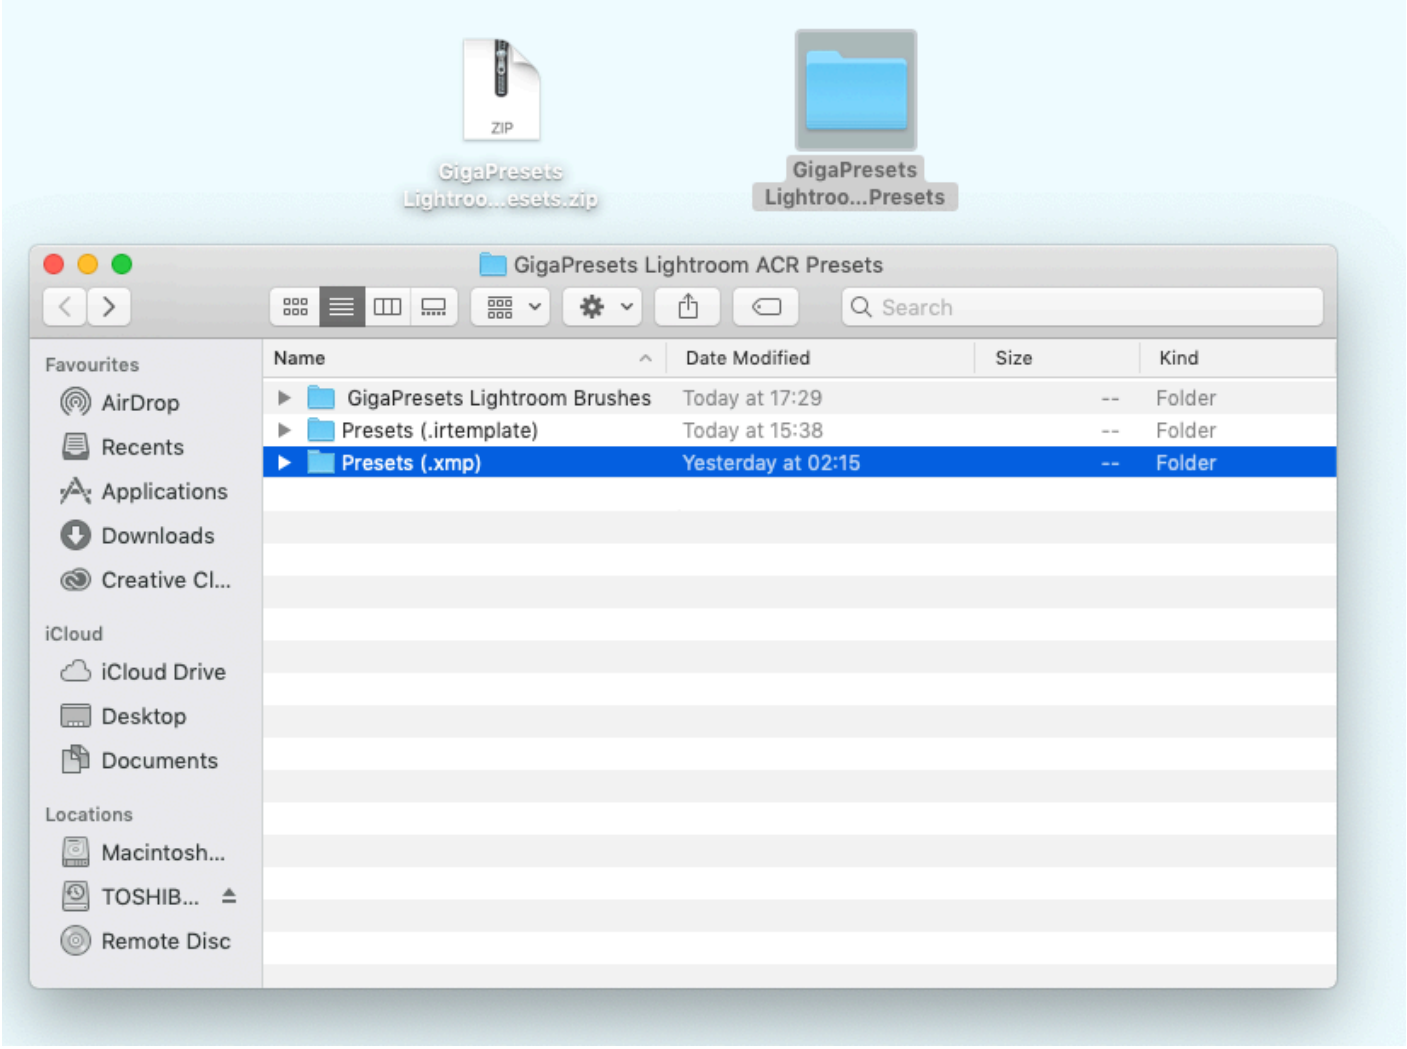
GigaPresets

HOW TO INSTALL PRESETS
for Lightroom Classic CC (v.7.3 and later) and Photoshop ACR



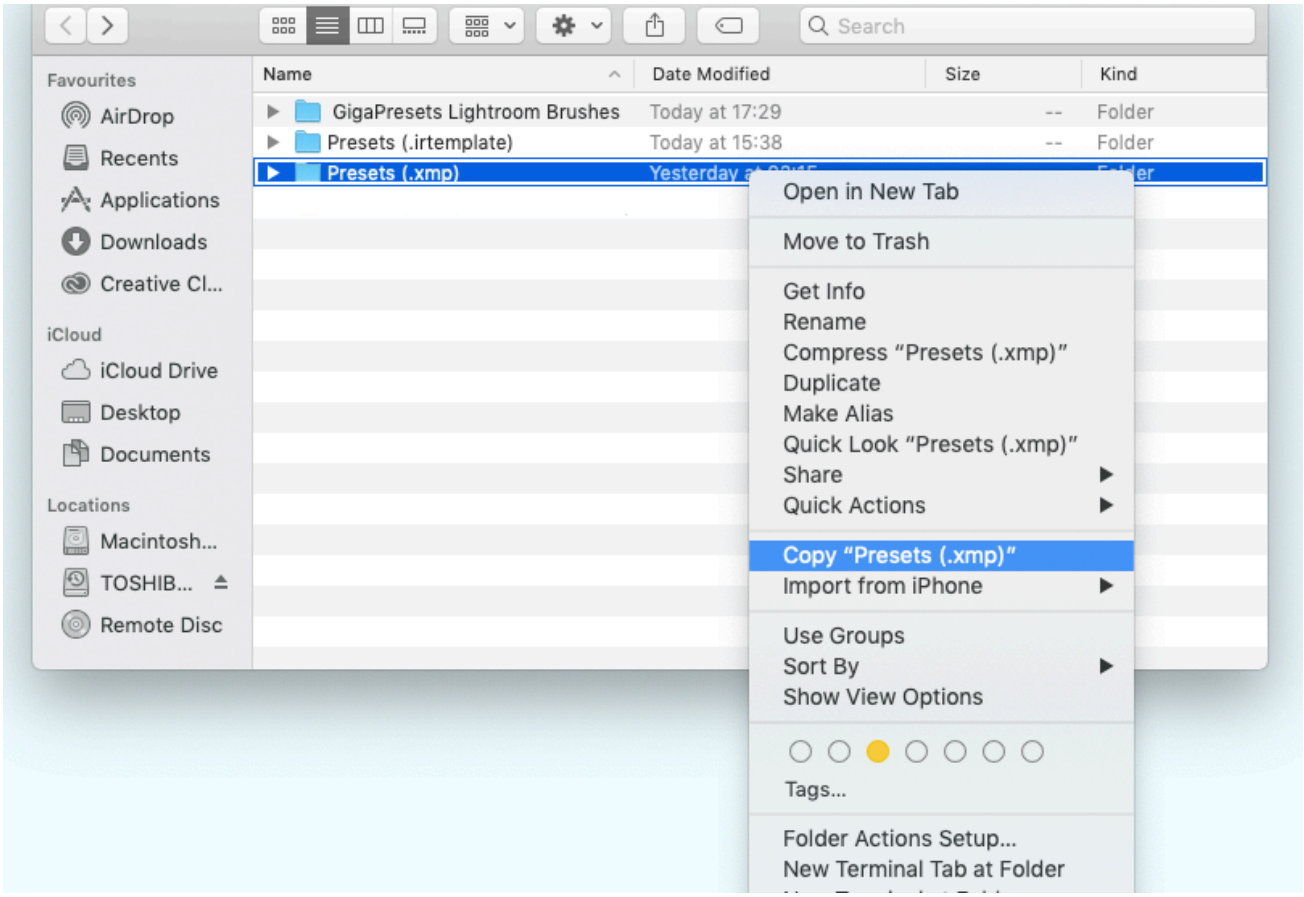
Step 1. Open the .zip file

After purchasing your product you can download it to your computer (see how to download) as a zipped file. Place the .zip file on your desktop or anywhere you like, and open the .zip file. To do so press right click on the .zip file and click open (for windows this can be the same, or use your favourite zip program to unzip the file)



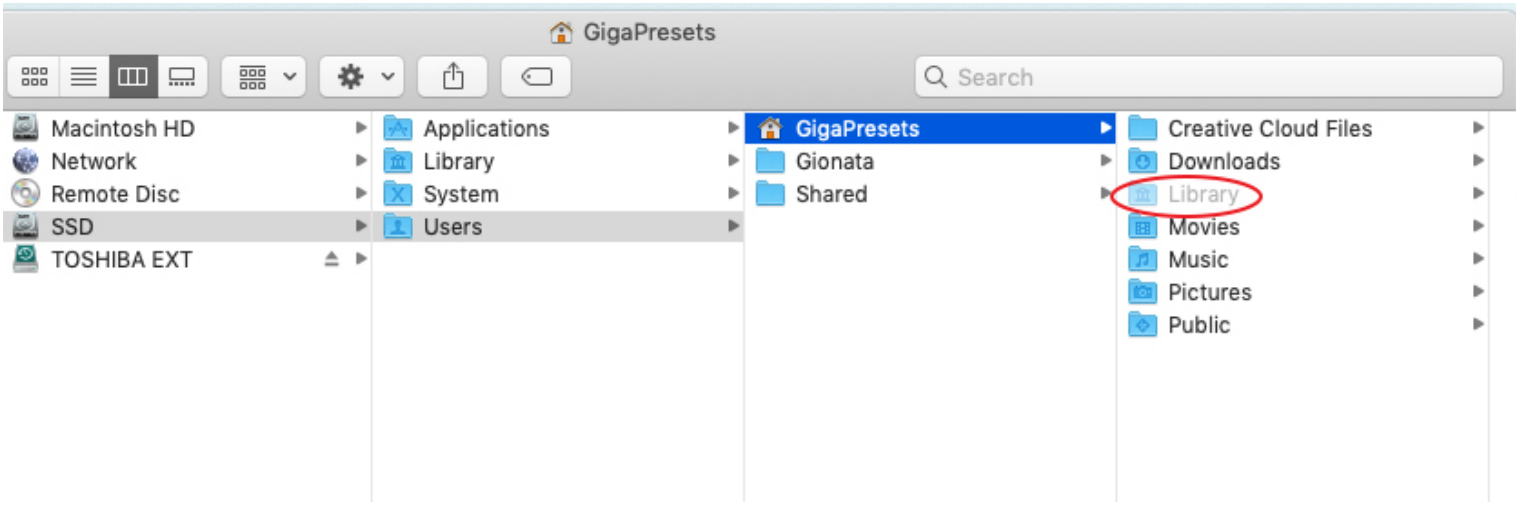
Step 2. Select the Presets (.xmp) folder

Now in addition to the .zip file you should see another folder, open the new folder. On windows this is the same. You'll see three folder Select the Presets (.xmp) folder



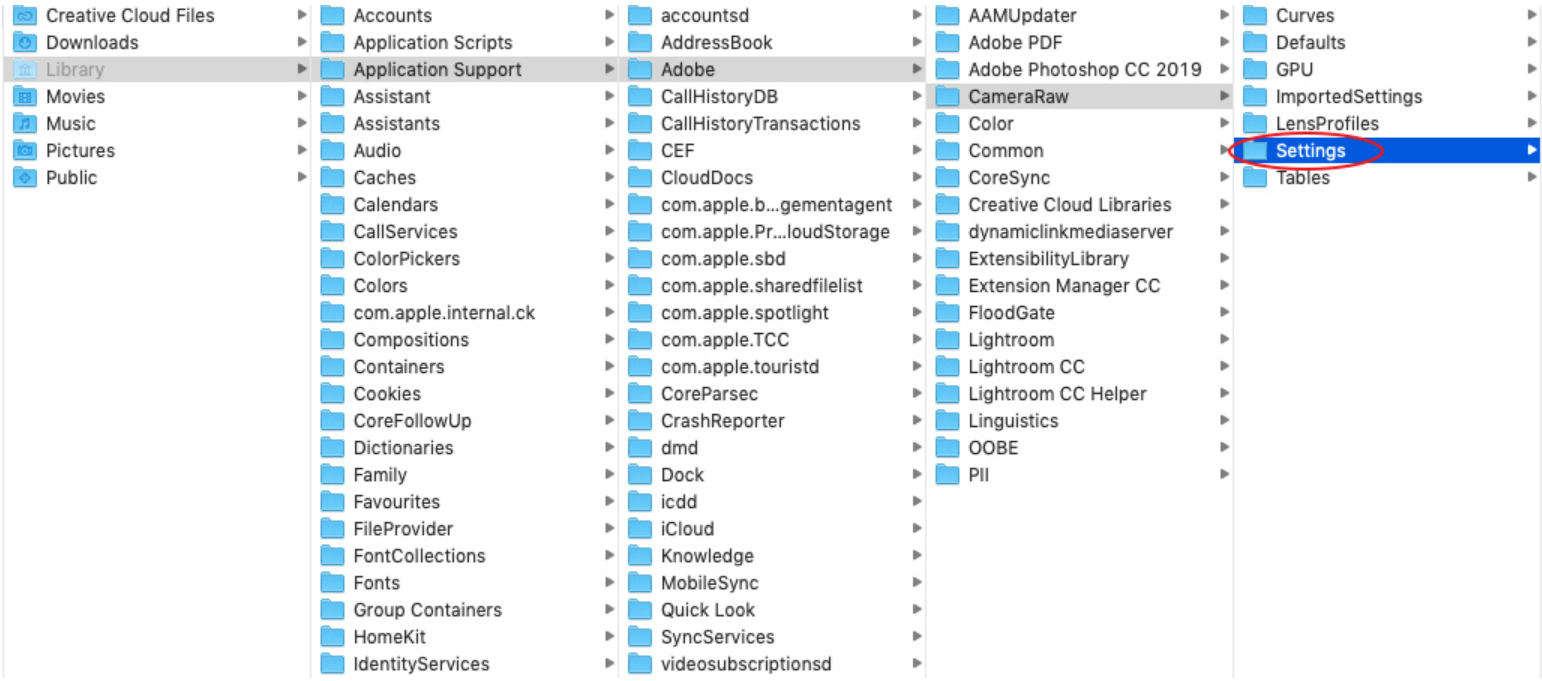
Step 3. Copy "Presets (.xmp)" folder

Copy "Presets (.xmp)" folder. To do so press the right click on the select folder and choose copy



Step 4. Open Library folder

Mac users : Go to Users>YOUR NAME>Library or in alternative go to the “Go” Menu at the top, hold down “Alt” or “Option” and the “Library” sub-menu should appear. Click on this.



Step 5. Past “Presets (.xmp)” in “Settings” folder

Opened library folder go to “Application Support” -> “Adobe” -> “Camera Raw” -> select “Settings”, press the right click on the select folder and choose Past to copy in “Presets (xmp)” folder.

Step 6. Close and re-start Photoshop CC and Lightroom Classic CC

Pc users : Go to the folder Users > YOUR USER NAME > “AppData” > Roaming > Adobe > CameraRaw > select “**Settings**”, press the right click on the select folder and choose Past to copy in “Presets (xmp)” folder

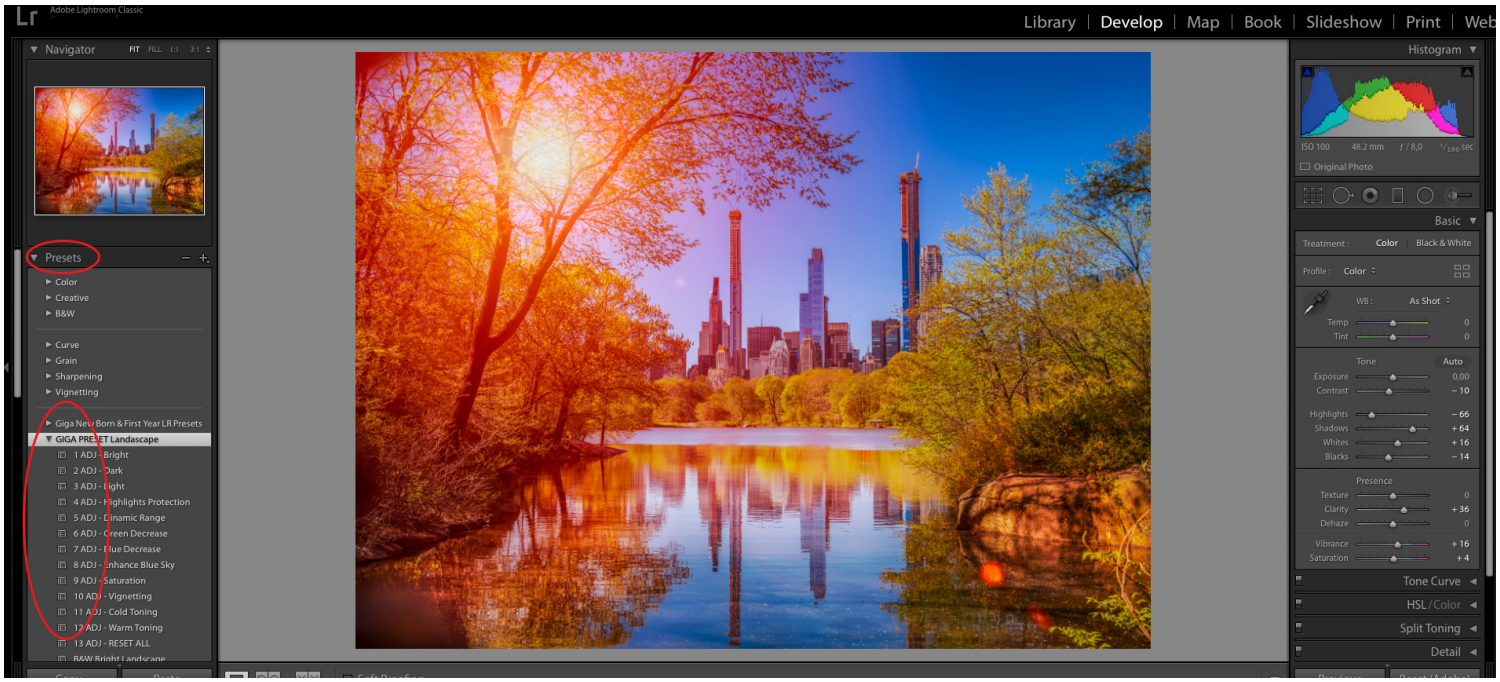
Important :

If you cannot see the "AppData" folder, do the following:

1 Open Folder Options by clicking the Start button Picture of the Start button, clicking Control Panel, clicking Appearance and Personalisation, and then clicking Folder Options.

2 Click the View tab.

3 Under Advanced settings, click Show hidden files, folders, and drives, and then click OK



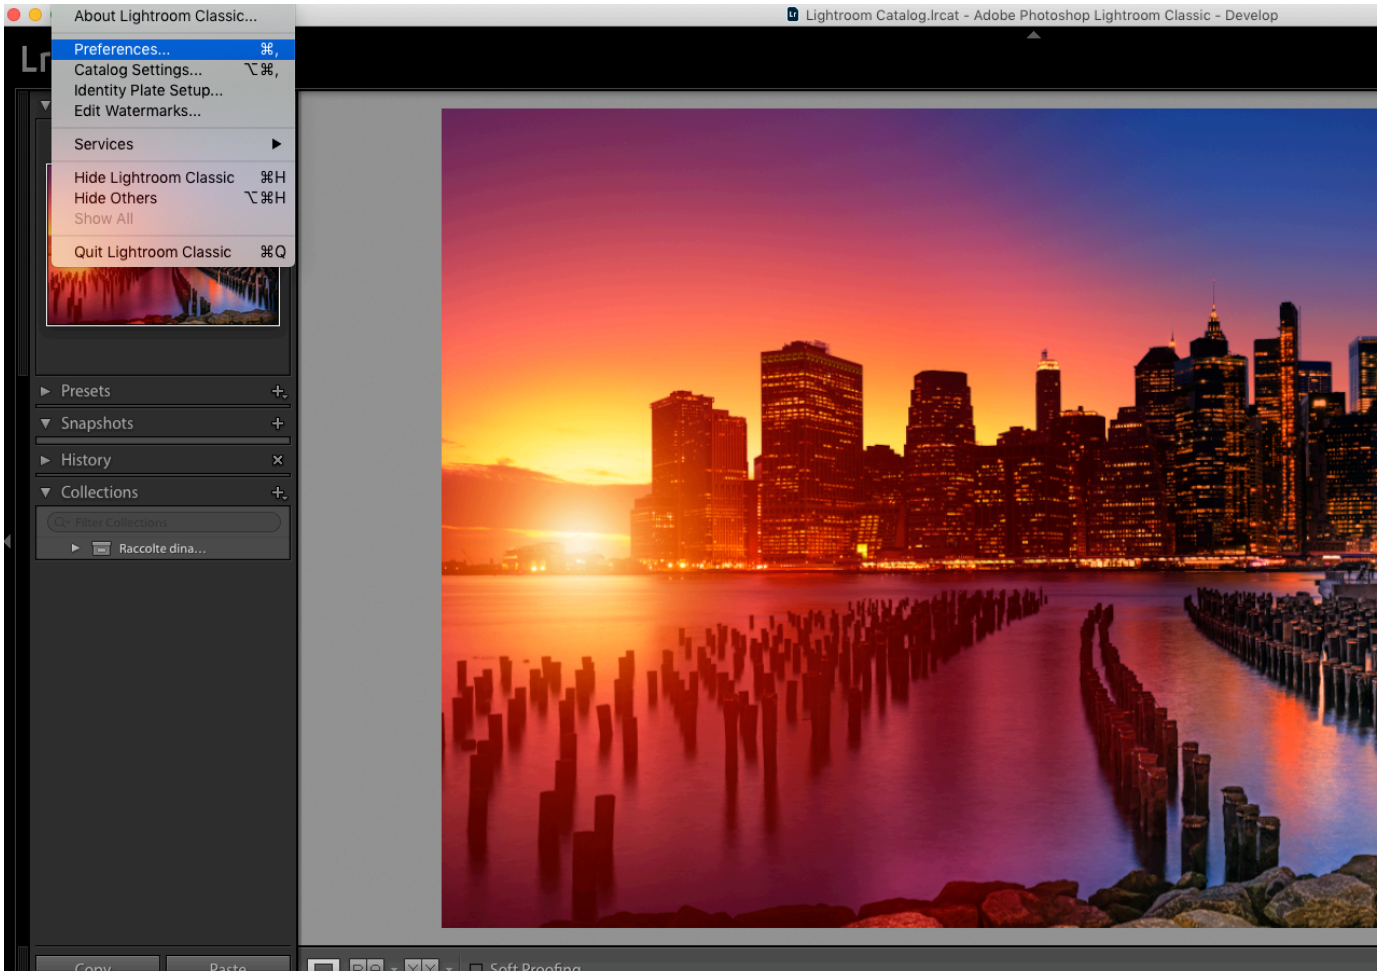
Step 7. Open Lightroom and check your presets

This is the simple and fast manual method to install presets in Photoshop Camera Raw and Lightroom simultaneously.
If you correctly performed the steps described above presets are installed correctly.
To verify open Lightroom import an image and select the "Develop" folder on the top. On the left, click on “Presets", the drop-down menu will open and lower you will see the presets list.

Step 8. Open Photoshop and check your presets

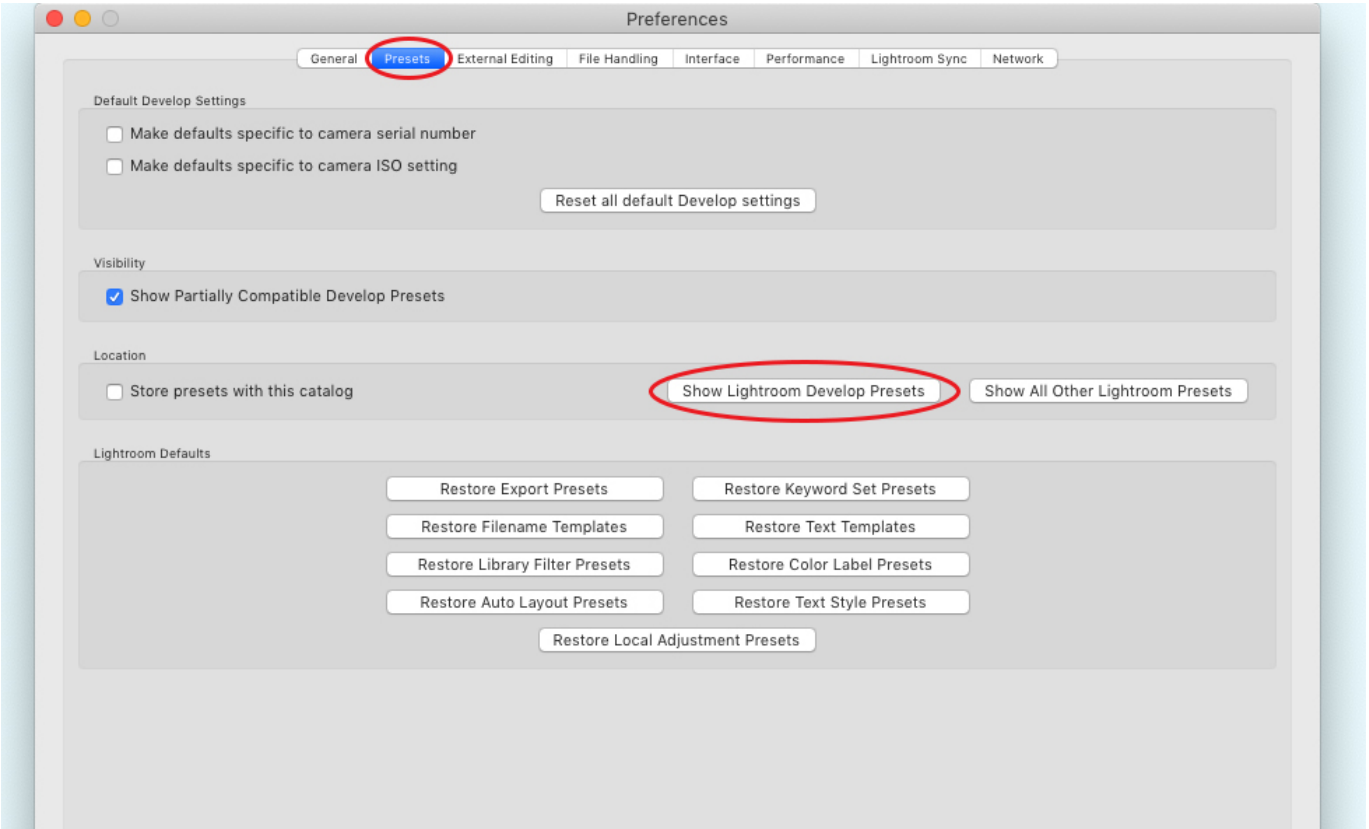
Do the same for Camera Raw open Photoshop, open an image and select Filter> "Camera Raw Filter" at the top on the toolbar. Select presets on the camera raw and toolbar, the pop-up menu with the Presets will appear at the bottom

Another alternative manual method for installing presets on Lightroom Classic CC: Follow the previous instructions from **step1** to **step 3**

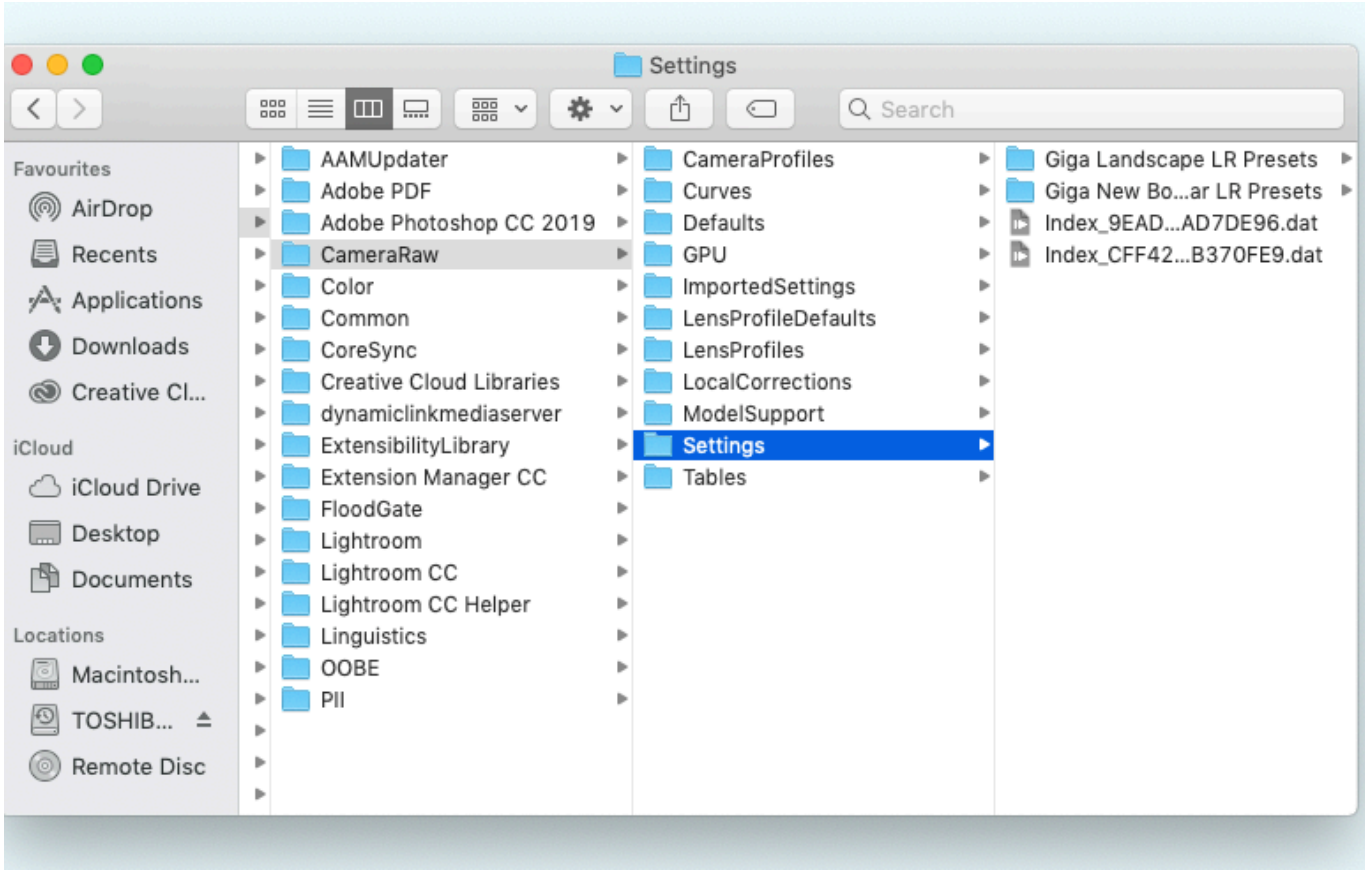


Step 4a. Open Lightroom and select Preferences

Open Lightroom, and go to: If you have a MAC: Lightroom > Preferences.
If you have a PC: Edit > Preferences. Click Preferences.



Step 5a. This will open a new window. Click the “Presets” section at top and choose “Show Lightroom Develop Presets”



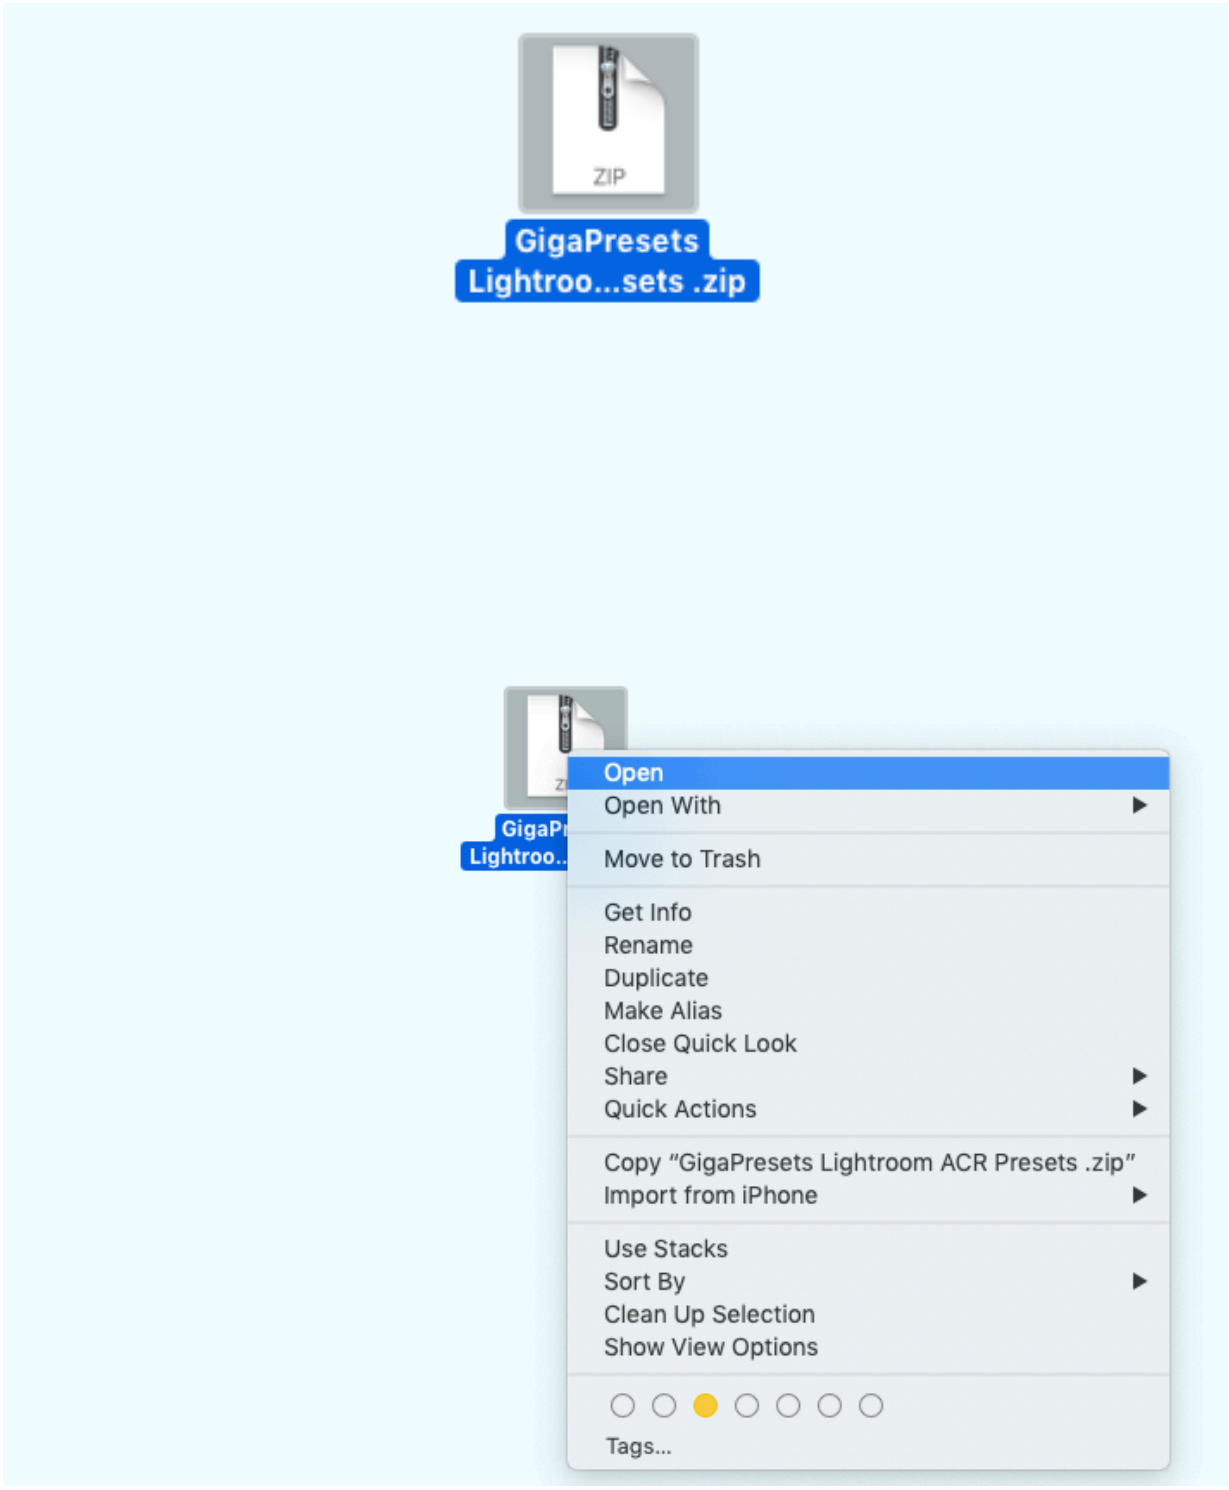
Step 6a. Past “Presets (.xmp)” in “Settings” folder

On this new new window go to “Camera Raw” folder > select “Settings”. To do so press the right click on the select folder and choose Past to copy in “Presets (xmp)” folder.

Step 7a. Close and re-start Lightroom

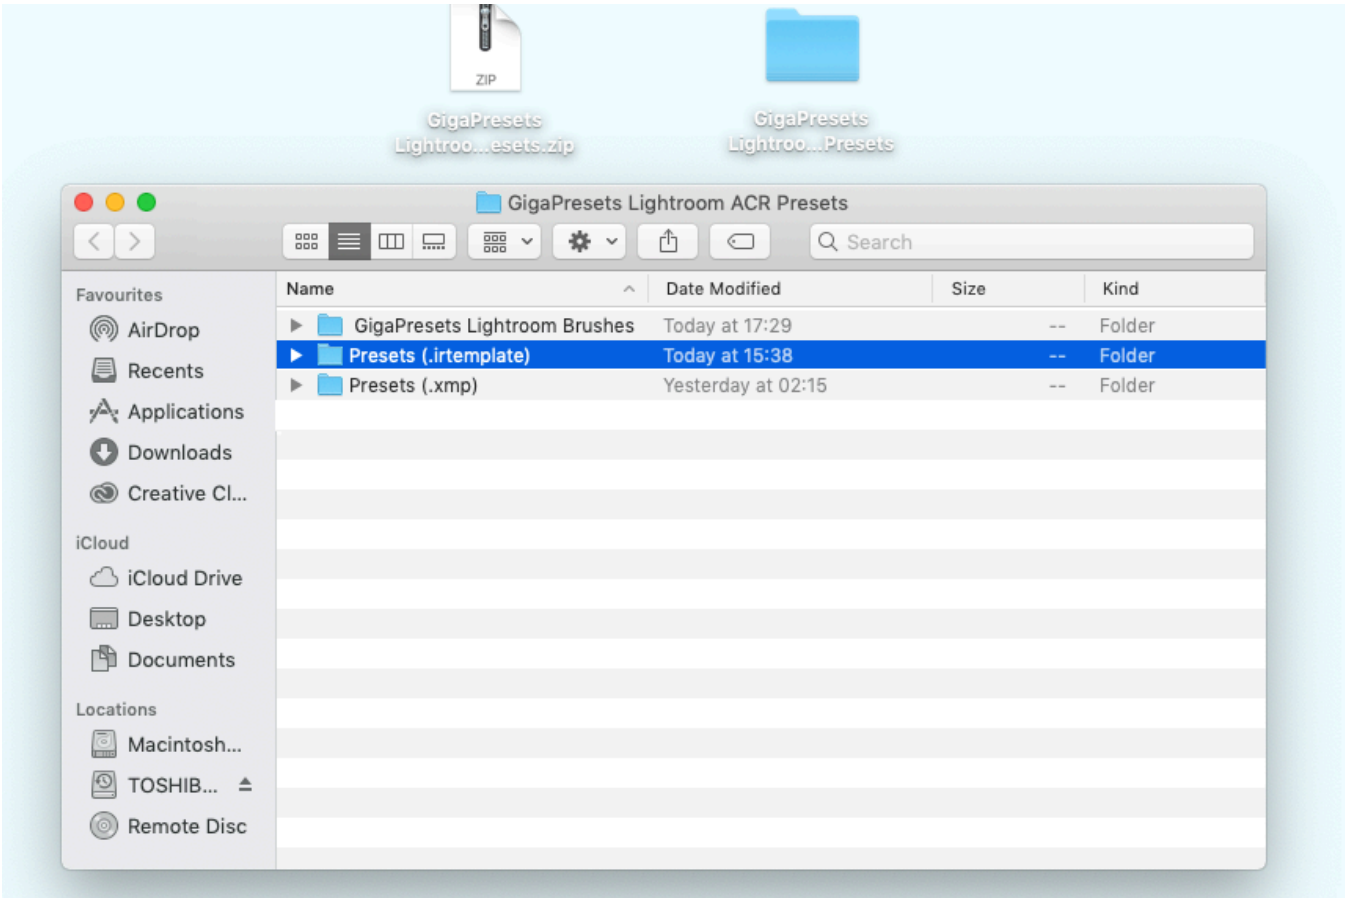
If you correctly performed the steps described above presets are installed correctly.

HOW TO INSTALL PRESETS
for Lightroom Classic CC (v 5.0 to 7.2)



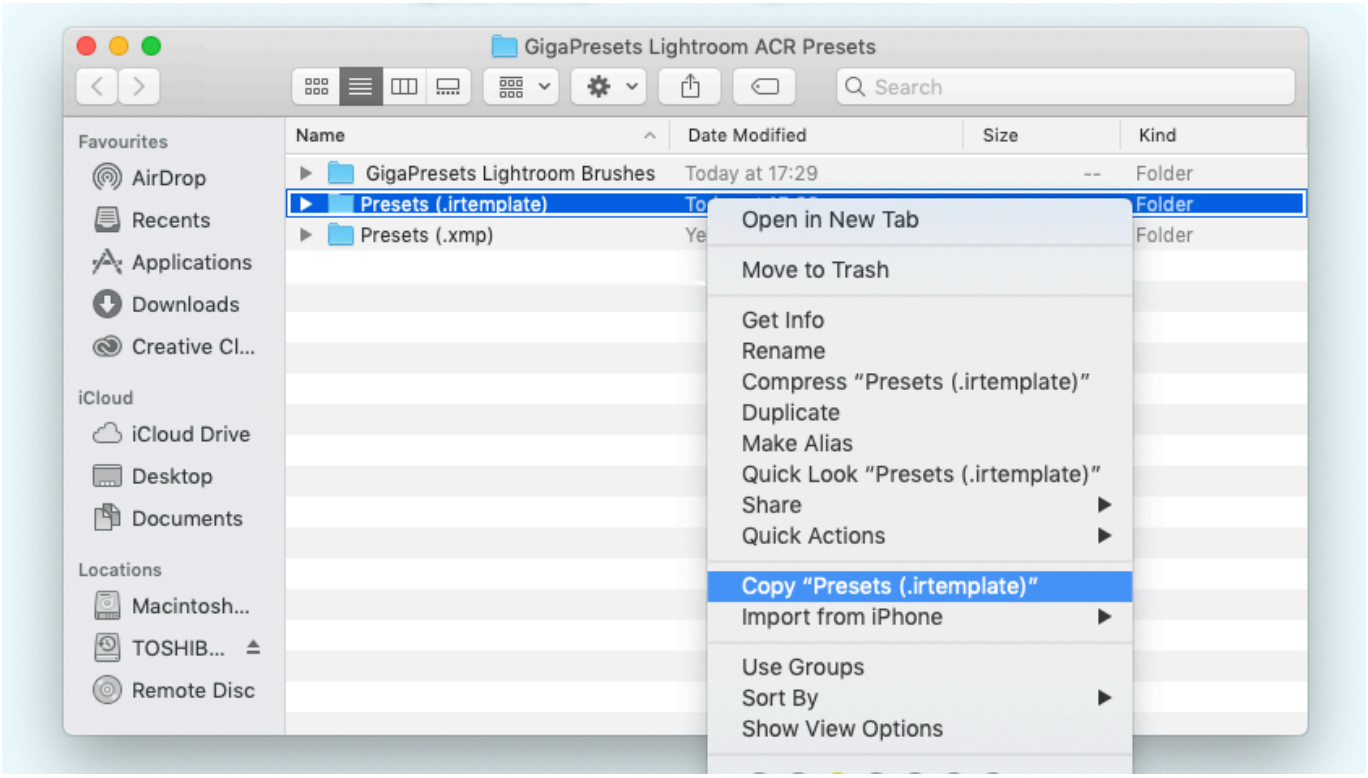
Step 1. Open the .zip file

After purchasing your product you can download it to your computer (see how to download) as a zipped file. Place the .zip file on your desktop or anywhere you like, and open the .zip file. To do so press right click on the .zip file and click open (for windows this can be the same, or use your favourite zip program to unzip the file)



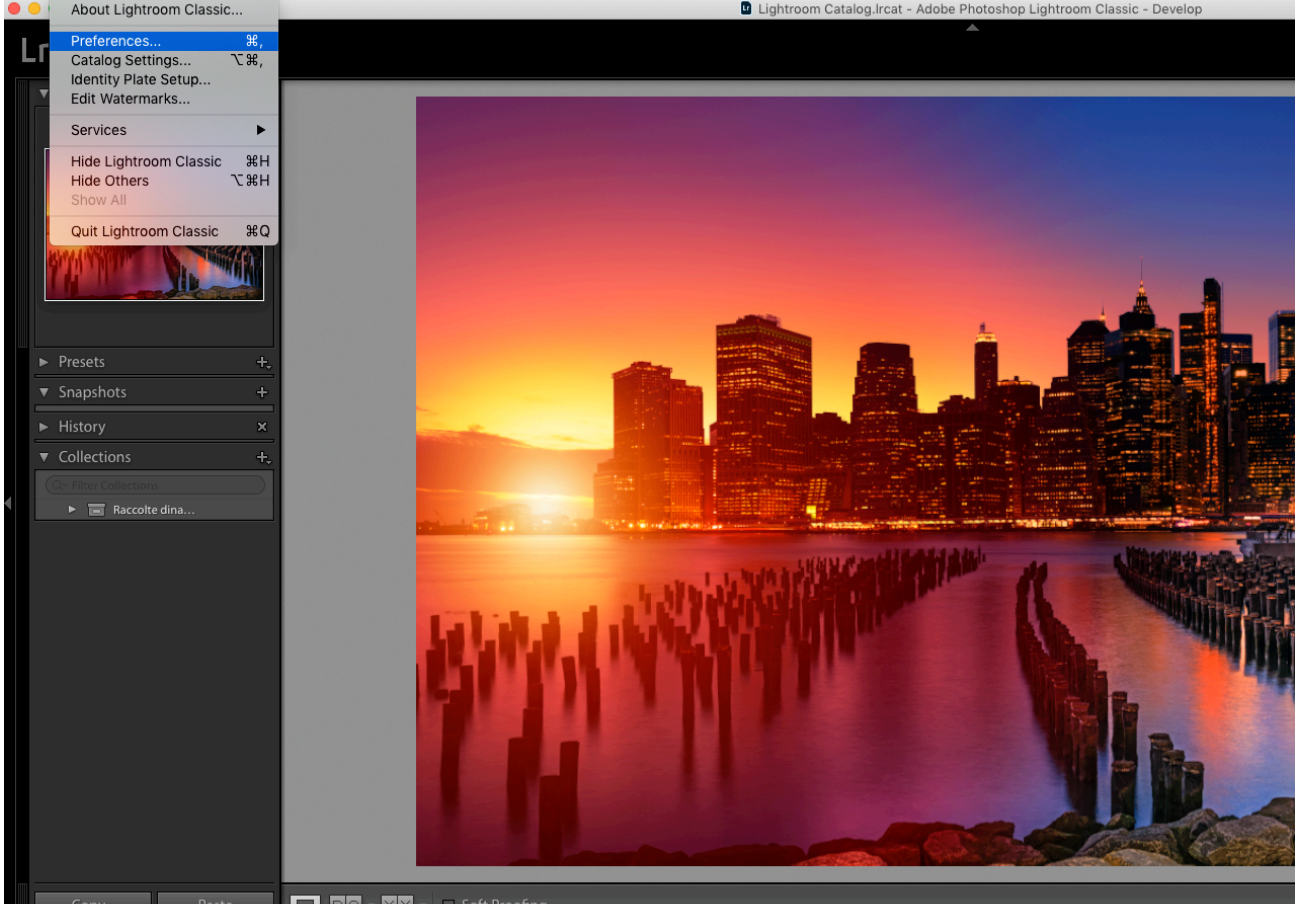
Step 2. Select the Presets (.irtemplate) folder

Now in addition to the .zip file you should see another folder, open the new folder. On windows this is the same. You should see three folder select the Presets (.irtemplate) folder



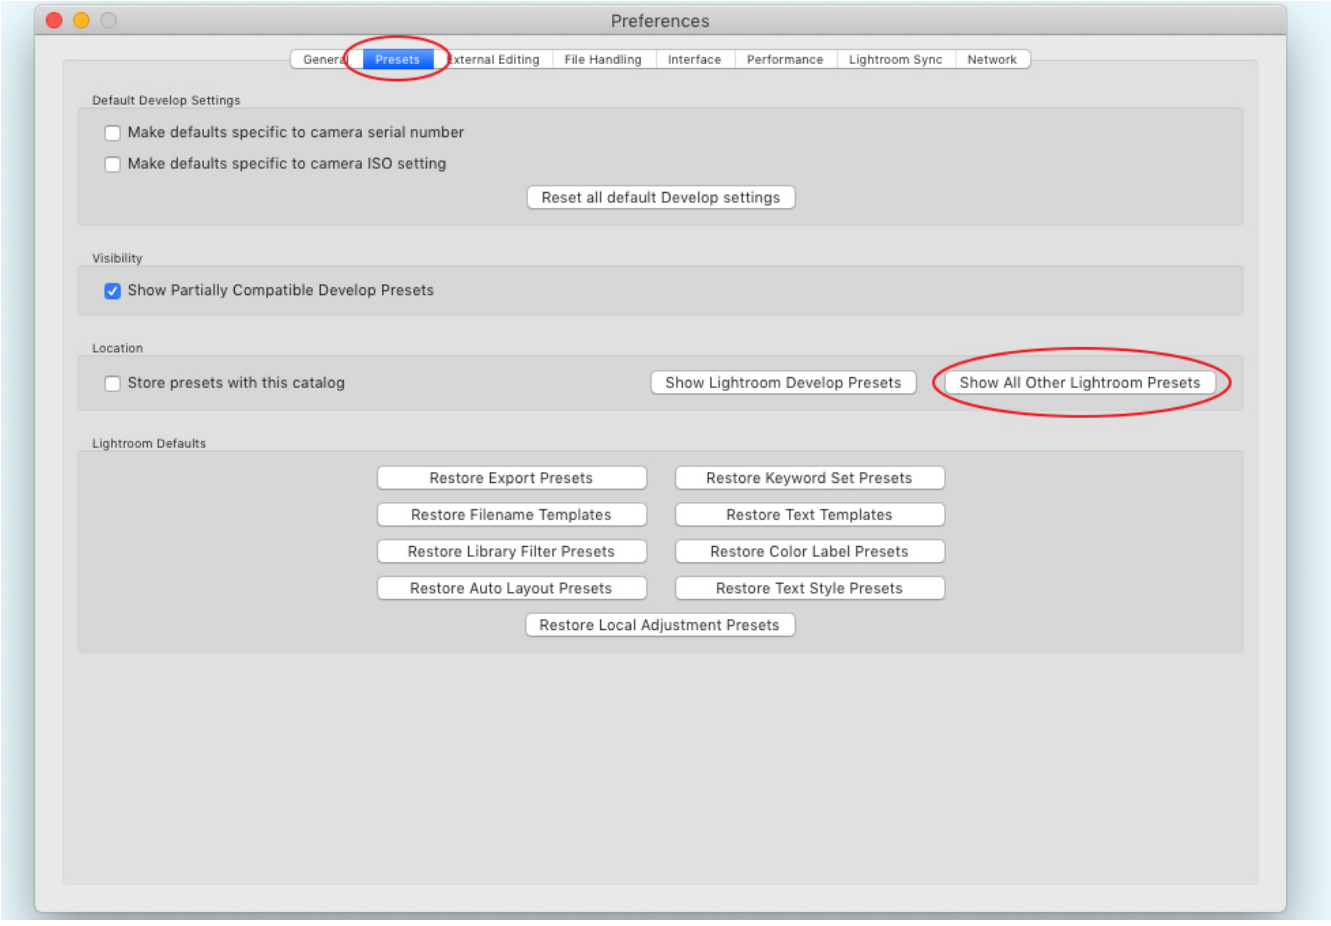
Step 3. Copy “Presets (.irtemplate)” folder

Copy “Presets (.irtemplate)” folder. To do so press the right click on the select folder and choose copy.



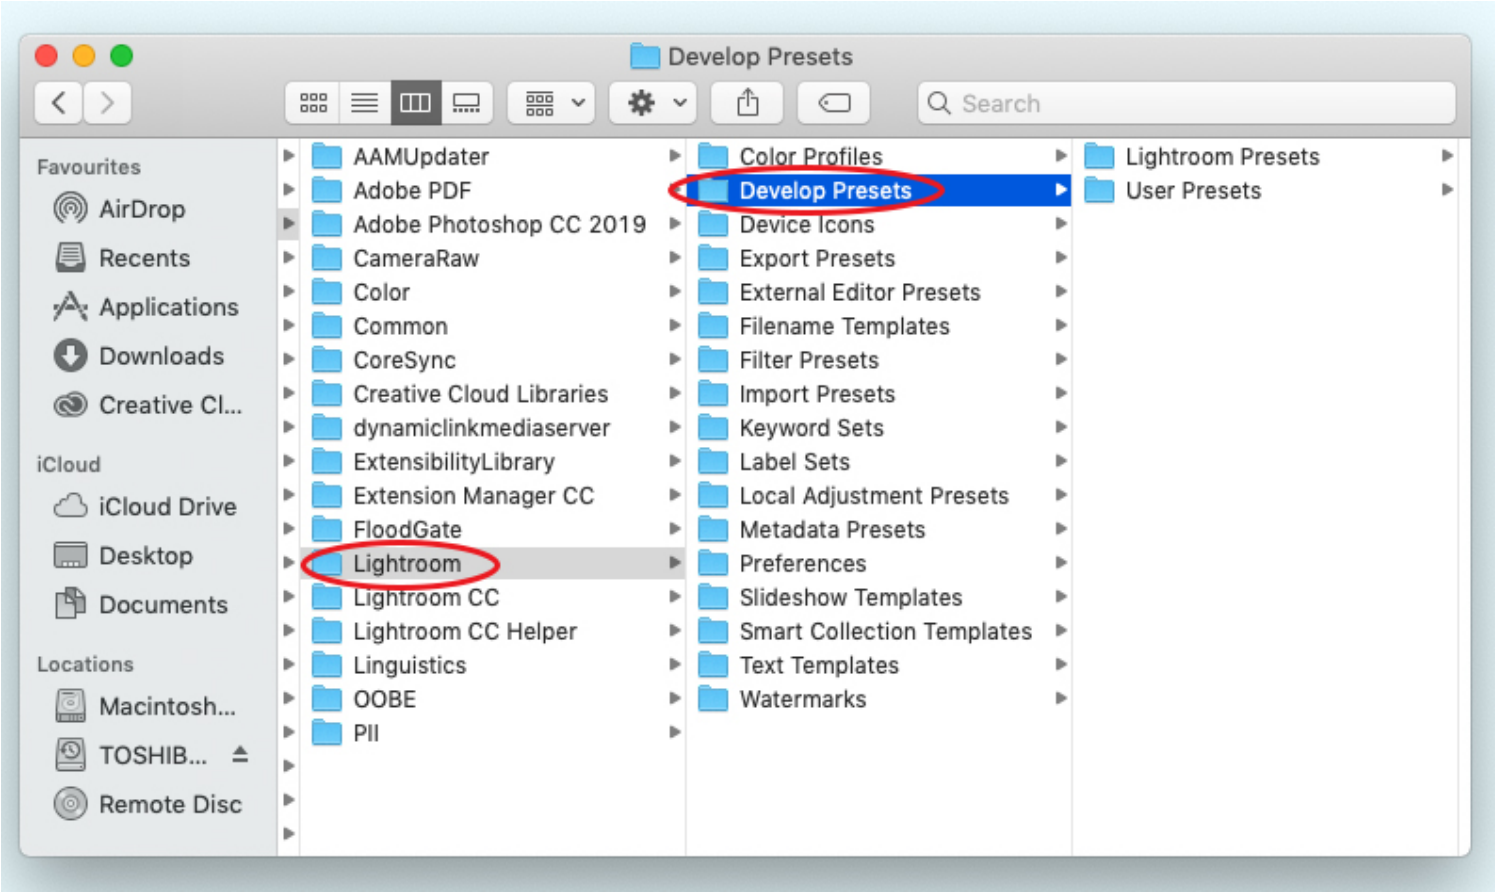
Step 4. Open Lightroom and select Preferences

Open Lightroom, and go to: If you have a MAC: Lightroom > Preferences.
If you have a PC: Edit > Preferences. Click Preferences.



Step 5. Click the “Presets” section at top and choose “Show Lightroom Presets” folder

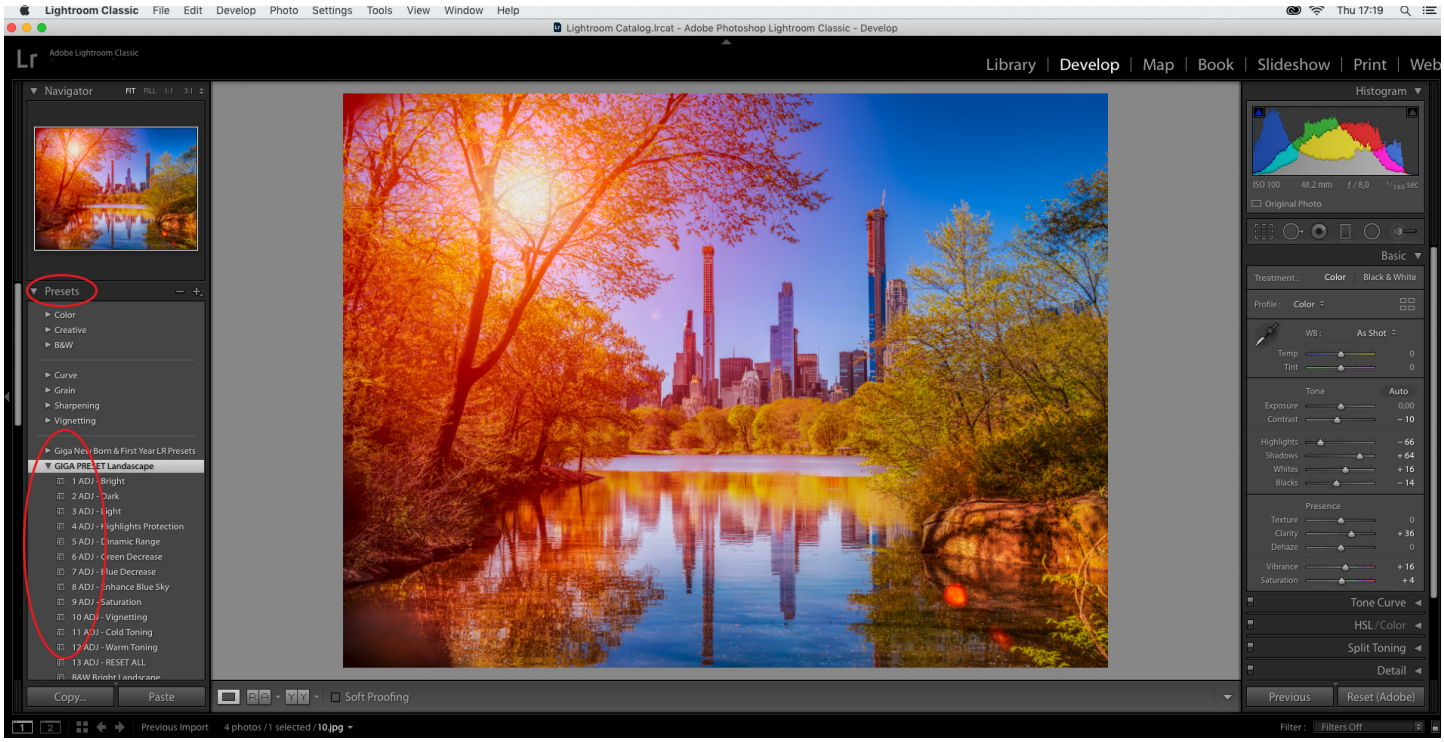
You will see a new window. It should be very similar to this one click the “Presets” section at top and choose “Show Other Lightroom Presets” folder (You will see a tab labeled “store presets with this catalog” on the left . Make sure this is unchecked).



Step 6. Past “Presets (.irtemplate)” in “Develope Presets” folder

On this new window go to “Lightroom” folder > select “Develop Presets”. To do so press the right click on the select folder and choose Past to copy in “Presets (.irt template)” folder. You will see a folder called “user presets”. Very important do not install your presets in the "user presets" folder or in the other. Install in “Develop Presets” folder

Step 7. Close and re-start Lightroom Classic CC



Step 8. Open Lightroom and check your presets

If you correctly performed the steps described above presets are installed correctly.
To verify open Lightroom import an image and select the "Develop" folder on the top. On the left, click on “Presets", the drop-down menu will open and lower you will see the presets list.
