<b>I Construction of Mirror Manifolds</b>	<b>1</b>
<b>Geometry and Quantum Field Theory: A Brief Introduction, by B.R. Greene, H. Ooguri</b>	<b>3</b>
1 Introduction . . . . .	3
2 Quantum Mechanics and the Path Integral . . . . .	4
2.1 Bosonic Model . . . . .	4
2.2 Supersymmetric Model . . . . .	6
3 The Witten Index . . . . .	9
4 Quantum Mechanics on a Riemannian Manifold . . . . .	12
4.1 Bosonic Model . . . . .	12
4.2 Supersymmetric Model . . . . .	14
5 The Supersymmetric Non-Linear Sigma Model and String Theory . .	16
6 Observables and Ring Structures . . . . .	22
7 Conclusions . . . . .	25
<b>Constructing Mirror Manifolds, by B.R. Greene</b>	<b>29</b>
1 Introduction . . . . .	29
1.1 The Ingredients . . . . .	30
2 Strategy of the construction . . . . .	33
3 Moduli Spaces of $N=2$ Superconformal Theories . . . . .	36
4 Minimal Models and their automorphisms . . . . .	40
4.1 Direct Calculation . . . . .	43
5 Minimal Minimal Models and Calabi-Yau manifolds. . . . .	45
5.1 Conjectured Correspondence . . . . .	45
5.2 Arguments Establishing Minimal-Model/Calabi-Yau Correspondence . . . . .	47
5.3 Generalizations . . . . .	54
6 Constructing Mirror Manifolds . . . . .	55
6.1 Orbifolding, Quantum Symmetries, and Unorbifolding . .	57
6.2 Details of the Calculation . . . . .	59
6.3 Examples . . . . .	63
6.4 Implications . . . . .	65
7 Conclusions . . . . .	67
<b>Dual Cones and Mirror Symmetry, by Victor V. Batyrev, Lev A. Borisov</b>	<b>71</b>
1 Introduction . . . . .	71
2 Reflexive Gorenstein cones . . . . .	73

3 From complete intersections to hypersurfaces . . . . .	76
4 Complete intersections and nef-partitions . . . . .	80
5 Mirrors of rigid Calabi–Yau manifolds . . . . .	82
 Mirror Symmetry Constructions: A Review, by Per Berglund, Sheldon Katz <span style="float: right;">87</span>	
1 Introduction . . . . .	87
2 $N=2$ Landau-Ginzburg models . . . . .	89
2.1 General framework . . . . .	89
2.2 Fractional transformations . . . . .	91
2.3 Transposition . . . . .	92
3 The toric approach . . . . .	94
3.1 Toric Generalities . . . . .	94
3.2 Batyrev’s construction . . . . .	96
3.3 The construction of Batyrev and Borisov . . . . .	98
3.4 Transposition via toric geometry . . . . .	100
3.5 Examples . . . . .	102
4 Discussions . . . . .	108
 On the Elliptic Genus and Mirror Symmetry, by Per Berglund, Måns Henningson <span style="float: right;">115</span>	
1 Introduction . . . . .	115
2 Landau-Ginzburg orbifolds and the elliptic genus . . . . .	117
2.1 The elliptic genus . . . . .	117
2.2 The Poincaré polynomial . . . . .	119
3 Mirror symmetry for Landau-Ginzburg orbifolds . . . . .	120
3.1 General results . . . . .	120
3.2 Examples . . . . .	123
 Orbifold Euler Characteristic, by Shi-shyr Roan <span style="float: right;">129</span>	
1 Introduction . . . . .	129
2 Loop space of an orbifold . . . . .	131
3 Equivariant K-theory interpretation . . . . .	132
4 Kleinian Surface Singularities . . . . .	132
5 Toric resolution . . . . .	133
6 Minimal resolution of a double cover . . . . .	137
 II The Structure of Moduli Space <span style="float: right;">141</span>	
 Phases of $N=2$ Theories in Two Dimensions, by Edward Witten <span style="float: right;">143</span>	

1	Introduction . . . . .	143
2	Field Theory Background . . . . .	145
3	The C-Y/L-G Correspondence . . . . .	154
3.1	The Model . . . . .	155
3.2	The “Singularity” . . . . .	157
3.3	Applications . . . . .	164
3.4	The Twisted Models In Detail . . . . .	168
4	Some Geometrical Background . . . . .	175
5	Generalizations . . . . .	179
5.1	Hypersurfaces In Weighted Projective Space . . . . .	179
5.2	Hypersurfaces In Toric Varieties . . . . .	181
5.3	Hypersurfaces in Grassmannians . . . . .	186
5.4	Intersections Of Hypersurfaces . . . . .	188
5.5	Change Of Topology . . . . .	192
6	Extension To $(0, 2)$ Models . . . . .	198
6.1	$(0, 2)$ Superfields . . . . .	198
6.2	Some Models . . . . .	203

## Calabi–Yau Moduli Space, Mirror Manifolds and Spacetime Topology Change in String Theory,

by Paul S. Aspinwall, Brian R. Greene, David R. Morrison 213

1	Introduction . . . . .	214
2	Mirror Manifolds, Moduli Spaces and Topology Change . . . . .	219
2.1	Mirror Manifolds . . . . .	219
2.2	Conformal Field Theory Moduli Space . . . . .	221
2.3	Complex Structure Moduli Space . . . . .	223
2.4	Kähler Structure Moduli Space . . . . .	224
2.5	Topology Change . . . . .	227
3	A Primer on Toric Geometry . . . . .	231
3.1	Intuitive Ideas . . . . .	231

## Foreword

---

Mirror symmetry has undergone dramatic progress since the Mathematical Sciences Research Institute workshop in 1991 whose proceedings constitute volume I of this continuing collection. Tremendous insight has been gained on a number of key issues, and it is the purpose of the present volume to survey some of these results. Some of the contributions are reprints of papers which have appeared elsewhere while others were written specifically for this collection.

The areas covered are organized into four sections, and each presents papers by both physicists and mathematicians. Section I focuses on the present understanding of explicit constructions of mirror manifolds. Paper 1 briefly reviews the notion of path integration to assist those less familiar with this physical tool. Paper 2 reviews the first, and at present, only known construction of mirror manifolds, at the level of conformal field theory. Paper 3 discusses a more general construction of mirror pairs, which as yet has not been established in conformal field theory, and paper 4 reviews this and other conjectured constructions. Paper 5 discusses mirror symmetry in the context of Landau-Ginsburg theories and paper 6 reviews properties of the orbifolding operation, from a mathematical perspective.

Section II focuses on work that has honed our understanding of both Calabi-Yau and conformal field theory moduli spaces. Papers 7 and 8 discuss properties of the enlarged Kähler moduli space required by conformal field theory, and in particular, establish the first concrete arena for physically smooth spacetime topology change. Paper 9 discusses aspects of geometrical structure of such moduli spaces and, in paper 10, some of the newfound understanding of moduli space is applied to the case of orbifold theories. In paper 11, the classification problem for Calabi-Yau's is discussed; in paper 12 Witten's notion of thickening the moduli space is described from a mathematical perspective and in paper 13 an example of an obstructed moduli space is discussed. Paper 14 presents an introductory discussion of duality properties of moduli space, paper 15 embarks on the issue of non-compact Calabi-Yau spaces while paper 16 discusses some interesting Calabi-Yau numerology.

Section III focuses on developments in using mirror symmetry to solve difficult counting problems, i.e. problems in enumerative geometry. Papers 18 and 19 discuss the methods for counting rational curves for examples whose parameter space is larger than one, while paper 17 presents a review of the multi-parameter case in general. Paper 20 places the physical approach to these enumerative problems on more firm mathematical foundation, as well as applying such methods to a variety of counting problems. Paper 21 resolves a number of key issues in mirror symmetry such as the form of the mirror map, in addition to providing a means of extending the domain of accessible counting problems to higher genus curves. In paper 22, some aspects of the methods used in applying mirror symmetry to enumerative problems

are placed in an appropriate mathematical framework.

Section IV focuses on the extension of mirror symmetry away from the familiar case of complex dimension three to both lower and higher dimension. Papers 23 and 24 discuss mirror symmetry for complex dimension 2 and papers 24 and 25 discuss various aspects of mirror symmetry in dimension greater than 3.

Due to space limitations, there are a number of equally interesting and important developments that have not been included. The papers of this volume, though, will undoubtedly allow the reader to gain much insight into both the physics and the mathematics of the remarkable structure of mirror symmetry.

The editors wish to thank Arthur Greenspoon and Misha Verbitsky, whose tremendous work and dedication has greatly improved the technical quality of this volume.

# Glossary

- P–Riemann symbol, 322
- ansatz, 434, 587, 752, 758, 765, 789

  - for product of  $\mathbb{P}^1$ , 649
  - for projective spaces, 606
  - recursive calculation of, 605
  - restricted system of, 615
  - tree level, 605
    - , – codimension zero, 649
    - , – motivic system of, 614
  - tree level system of, 610, 615, 616, 621, 630
    - , – **definition**, 607
    - , – quantum cohomology associated with, 624
    - , – restricted, 616
  - zero–codimensional of genus zero, 605
- Gromov–Witten invariants**, 774
- Gromov–Witten numbers**
  - basic, 629
- Gromov–Witten theories**, 638
- Grothendieck residue**, 312

- Grothendieck tautological sheaf, 86  
 Grothendieck–Riemann–Roch formula, 675  
 GSO projection, 581, 582  
   – generalized, 56, 101  
 Hermite theorem, 656  
 heterotic string, 428, 443, 585  
   – compactifications of, 123, 286, 290, 543, 544, 653, 785  
     – , – toroidal, 705, 709  
   – moduli space of, 451  
   – theory  
     – , – vacua of, 96  
   – vacua of, 286  
 Hilbert polynomials, 713, 732, 733  
 Hilbert schemes, 140, 146, 672, 673, 739, 775, 779  
   – of rational curves of a given degree, 740  
 Hilbert spaces, 16, 18, 22, 25, 30, 31, 55, 138, 429, 758, 759  
 Hirzebruch–Riemann–Roch theorem, 445–448  
 Hirzebruch–Jung  
   – singularity, 92  
   – string, 379  
 Hodge structures, 81, 87, 681, 682, 686, 705, 799, 800  
   – mixed, 468, 684, 685, 693  
     – , – category of, 687  
     – , – Hodge–Tate, 681  
     – , – Hodge–Tate, variation of, 689  
     – , – Hodge–Tate, **definition**, 687  
     – , – motivic, 693  
     – , – variation of, 681, 684, 688  
   – polarized  
     – , – variation of, 681, 684, 695  
     – , – variation of, which is a nilpotent orbit, 684  
   – variation of, 82, 460, 548, 604, 606, 629, 639, 681, 761, 794  
 Hodge–Riemann bilinear relations, 705, 746, 749  
 holomorphic anomaly, 585, 586, 592, 593, 666, 670  
 holonomy group, 218, 360, 364, 416, 423, 459, 709, 710, 714  
   – of Zamolodchikov metric, 701  
 hypergeometric equations  
   – generalized, 319  
 hyperkähler  
   – Calabi–Yau manifolds, 438  
   – condition, 437  
   – metric, 699  
   – quotient, 186  
   – space, 432  
   – structure, 439  
 instanton  
   – point-like, 182, 183  
 instanton approximation, 660  
 instanton contributions, 205  
   – negative, 540  
   – to correlation functions, 471  
   – to the three-point functions, 773  
 instanton corrections, 223, 281, 297, 326, 465, 558, 561, 610  
   – corresponding to rational curves, 362  
   – in genus zero, 659  
   – of the  $\sigma$ -model, 291  
   – to Yukawa couplings, 739  
 instanton expansion, 483–485, 527, 740, 741  
   – in terms of rational curves, 756, 758  
   – in the large Kähler structure limit, 593  
   – of A-model correlation functions, 774  
   – of the linear  $\sigma$ -model, 181  
   – of Yukawa couplings, 776  
 instanton moduli space, 182  
   – dimension of, 183

- instanton numbers, 170, 178, 179, 182
  - integer, 559
  - the standard quantization of, 179
- instanton sums, 170, 175, 203–205
- instanton terms in the expansion of the Yukawa couplings, 537
- instantons
  - “universal degenerate instanton”, 674
  - axionic
    - , – **definition**, 437
    - , – four-dimensional, 429
  - degenerate, 537, 538, 671, 672, 674
    - , – **definition**, 536
    - , – moduli of, 671–673
    - degree one instantons, 659
    - delta-function instantons, 659
    - genus one, 488, 532, 533, 535
      - , – instanton numbers for, 485
    - genus zero, 483, 533, 659
    - holomorphic, 656
    - in continuous families, 484, 529, 540
    - moduli of, 676
    - of the  $\sigma$ -model, 180
    - primitive, 657, 658
    - rational, 659
    - small-scale, appearing in the A-model, 262
    - smooth at a fundamental level, 180
    - world-sheet instantons, 325
      - , – a. k. a. rational curves, 740
- intersection numbers, instanton-corrected, 593
- Ising model, 53
- isomonodromic deformations
  - governed by Painlevé VI equation, 629
  - of the  $\mathcal{D}$ -module, 629
- K3 surfaces, 257, 389, 391, 661, 699, 701–703, 705, 707, 710–712
  - $N=(4,4)$  theory on, 706
  - Arnold’s strange duality for, 708
  - CFT on, 698, 701, 707
  - compactifications of heterotic string, 705
  - cone of curves of, 395
  - mirror map for, 708
  - mirror symmetry for, 698–700, 790
  - moduli of, 698, 699, 701, 706
  - moduli of  $N=(2,2)$  theories on, 706
  - moduli of Einstein metrics on, 702
  - Mori cone for, 394
  - pencil of, 538, 539
  - period domain for, 713
  - quartic, 486
  - string theory on, 698
    - , – moduli space of, 699, 703
  - with involution, 713, 716, 718–720, 724, 725, 727, 730, 732, 734
    - , – Nikulin’s classification of, 716
    - with Picard number at least 3, 394
    - with Ricci-flat metric, 702
- Kahler class, 63, 73, 164, 171, 188, 190, 194, 229, 346, 464, 488, 655, 660, 708
  - “small and positive” value of, 64
  - analytic continuation of Calabi–Yau to negative Kähler class, 165
  - Calabi–Yau  $\sigma$ -model with a particular Kähler class, 63
  - complexified, 651
    - , – **definition**, 653

- deformations of, 97, 287, 290
- negative
  - , – analytic continuation to, 63
- union of (Kähler cone), 384
- untwisted modulus, 290
- Kahler cone, 220, 221, 231–233, 254–256, 262, 263, 277, 361, 362, 369, 370, 385, 395, 464, 469–471, 488, 497, 552, 553, 563, 572, 576, 578, 621
  - **definition**, 46, 384
  - a potential blowing-down map associated to, 471
  - common walls of, 220
  - complexified, 219, 221, 222, 463, 751, 752
  - dependence on deformations of the complex structure, 384
  - on Calabi–Yau threefolds, 395
  - the boundary of, 377
- Kahler forms, 251, 273, 545, 546, 599
  - in an orbifold sense, 255
  - moduli space of, 362
    - , – (a Kähler cone), 361
  - of the projective spaces, 544
  - on K3 surfaces, 699, 701
  - the restricted basis of, 548
- Kahler manifolds, 29, 30, 42, 80, 95, 192, 230, 274, 440, 443, 502
  - admitting a Ricci-flat metric, 29
  - intersection forms on, 420
  - of restricted type, 742
  - Ricci-flat, 657
  - sigma-models on, 651
  - special, 345, 347, 739, 742, 748
    - , – **definition**, 287, 348
  - specified by its Kähler potential, 432
  - supersymmetric quantum mechanics on, 31
- Kahler moduli, 47, 48, 61, 72, 99, 227, 228, 231, 232, 234–236, 251, 259–261, 269, 272, 472, 504, 538, 552, 586, 661, 663, 743, 751, 760
  - assymetry between complex and Kähler moduli, 272
  - at the infrared fixed point, 61
  - augment it by concatenating other regions, 47
  - cells of, 261
  - compactification of, 552
  - complexified, 221, 254, 261, 262, 708
  - coordinate on, 752, 760
  - enlarged, 49, 97, 220–223, 272, 281, 282
    - , – **definition**, 48
    - , – consisting of 100 distinct regions, 221
    - , – fully enlarged, 224
    - , – isomorphic to the complex structure moduli of its mirror, 117
    - , – partially enlarged, 225, 235, 254, 272
      - , – regions in, 222, 282
    - naïve coordinates on, 232
    - of the torus, 655, 662
    - on a toric variety, 273
    - partially enlarged, compactification of, 254
    - regions in, 282
    - singular points in, 235
    - theories represented by points in, 219
    - traditional, 281
    - walls in, 260
    - walls of
      - , – flopping walls, 232
  - Kahler moduli fields, 543
  - Kahler potential, 58, 98, 290, 291, 304, 309, 310, 312, 313, 345, 348–

- 350, 432, 433, 439, 533, 553,  
566, 742, 743
- non-holomorphic differential equation for, 287
- associated with the flat metric, 126
- expressed in terms of holomorphic sections, 348
- for Weil–Petersson metric, 557
- having a holomorphic prepotential, 742
- perturbations coming from, 98
- renormalization of, 125
- written in terms of holomorphic CCWZ-type coset representatives, 304
- Kahler structure deformations, 544, 548
- Kahler–Hodge manifolds, 345
  - definition, 346
- Kaluza–Klein theory, 220
- Killing symmetries, associated with non-trivial dilaton fields, 428
- Kleinian singularities, 139, 404

  - , – superstring target space, 359
  - Calabi–Yau
  - , – **definition**, 360
  - chiral twist-fields in an, 371
  - compactification, 278
  - conformal model
  - (Landau–Ginzburg), 63
  - history of the term, 360
  - in string theory, 282
  - is equivalent to theory with a finite gauge group (in QFT), 165
  - Landau–Ginzburg, 62, 63, 65, 96, 97, 100, 104, 114, 115, 123–125, 127, 128, 131, 164, 165, 187, 189, 191, 279, 786, 788, 793, 794, 798, 800
  - , – as  $\sigma$ -models on supermanifolds, 786
  - , – at low energies, 199
  - , – Hodge numbers, 798

- , – mirror symmetry for, 128, 131
- , – number of  $(\pm 1, 1)$  states, 99
- , – possessing Kähler forms contributed from the twisted sectors, 790
- , – rigid, 790
- , – sigma-model interpretation of, 786
- , – twisted sectors of, 99
- Landau–Ginzburg,  $N=2$ 
  - , – classification of, 99
- Landau–Ginzburg,  $N = 2$ , 97
- maximally resolved
  - , – **definition**, 361
- mirror symmetry for, 92
- moduli space of, 277, 353
- nature of (in string theory), 219
- of homogeneous projective spaces, 804
- of Landau–Ginzburg theories, 50, 61
- of minimal models, 50, 124
  - , – tensor product of, 57
- of the  $O$ -theory, 421
- of the  $O$ -theory (is the  $F$ -theory), 421
- same as a smooth stack, 614
- singularities, 48
- string theory on, 359, 361
- toroidal, 360, 661
  - , – rigid, 790
- vector bundle analog of ( $V$ -bundle), 191
- with superpotential, 189
- orbifold cone, 363
- orbifold conformal field theory, 361
- orbifold Euler characteristic, 136–138
- orbifold Euler number, 139, 143
  - **definition**, 136
  - connection with the equivariant
- Euler characteristic, 138
- orbifold limits
  - of Einstein metrics on K3, 701
- orbifold metrics, 702
- orbifold model
  - field configurations in, 123
- orbifold phase, 363
- orbifold point, 361, 362, 377, 378
  - in the moduli space, 379, 701
  - Landau–Ginzburg, 62
  - minimal model orbifold point, 72
- orbifold region, 222, 363
- orbifold singularities, 199, 221, 232
- orbifold theory, 222, 227
- orbifolding, 52, 53, 56, 70, 73, 123, 799
  - **definition**, 44
  - by quantum symmetry, 67, 68
  - by the diagonal phase group, 789
  - construction of mirror symmetry by, 502
  - does not change the central charge of CFT, 55
  - in CFT, 66
  - modulo finite symmetry group, 91
  - on  $N = 2$  minimal models, 65
  - varieties related by, 259
- orbifoldisation
  - with respect to the group, 582
- Painlevé equation, 629
- Painlevé VI equation, obtained from Schlessinger equation, 629
- Peccei–Quinn symmetries, 559, 561
- Pfaffian system, 555
- Picard group, 386, 393–395, 405, 449, 571, 713, 733, 735, 736
- Picard number, 736
- Picard–Fuchs equations, 119, 286, 287, 290, 310, 314, 322, 338, 339, 375, 460, 527, 543, 544, 550,

- 552, 553, 573, 574, 576, 580, 587, 593, 601, 743, 753, 768
- **definition**, 375, 748
- and generalized hypergeometric functions, 461
- as generalized hypergeometric equations, 754
- asymptotic behaviour at the singular locus, 593
- covariant, 350
- deriving, 460, 545, 547, 554, 741
  - , – by Griffiths-Dwork-Katz reduction, 553
  - , – for general Calabi–Yau *d*-fold, 287
  - , – from Gauss–Manin connection, 460
  - , – obtained from toric data, 548
    - , – via periods, 461
  - equivalent to Gauss–Manin, 548
  - example of, 287
  - for a Calabi–Yau threefold, 287, 744
  - for Landau–Ginzburg orbifolds, 800
  - for one variable, 312
  - for periods, 318, 330
  - fourth order, 315
  - holomorphic, 299
    - , – in relation to special geometry, 290
  - in special geometry, 288, 289
    - , – identical to three-point correlators, 290
  - leading coefficients
    - , – deriving holomorphic Yukawa couplings from, 292
  - linear system of, 345
  - matrix form of, 292
  - monodromy group of, 290, 317, 321
  - monodromy properties, 313, 314, 321, 326
  - non-holomorphic, 305
  - restricted, 538
  - singular, 330
  - singularities of, 375, 553, 554
    - , – calculation, 553
  - solutions, 345, 375, 508, 558, 578
    - , – expressing Yukawa coupling with, 559
    - , – general, 375
    - , – local, 461
    - , – logarithmic, 594
  - special geometry for, 313
  - structure of, 292
  - systems
    - , – singular, 306
  - the periods of the holomorphic three–form, 308
  - third- and second-order, 580
  - used to compute Yukawa coupling, 543
- Picard–Fuchs identities**
  - second order, 306
- Picard–Fuchs operators**
  - **definition**, 460
- Picard–Lefschetz discontinuity operators**, 339
- Picard–Severi theorem**, 328, 332, 345
- Picard–Fuchs operators**
  - in special coordinates, 558
- Pochhammer symbol**, 754
- Poincare duality**, 205, 251, 468, 615, 622, 625, 638, 649, 760, 773
  - over integers, 474
- Poincare polynomial**, 125, 127
  - **definition**, 127
  - generalized, 128
  - restricted, 128, 130
- Poincare residue**, 798, 799
- prepotential**, 291, 557

- QCD**, 451, 657, 677  
**QFT**, 15, 41, 43, 61, 165, 223, 415,  
 – 417, 420, 458, 604, 606, 652

  - computations of, 290, 537, 802
  - contribution of a given rational curve to, 297
  - covariantly constant, 289, 290, 296, 299, 352
  - effects of the flop on, 537
  - expansion of, 537
  - expansions of, in terms of instantons of genus zero, 483
  - for  $d$ -point functions, 770
  - for low energy theory, 795, 796
  - full moduli dependence of, 566
  - generalized, 741
  - holomorphic, 292
  - in inhomogeneous special coordinates, 557
  - in special coordinates, 300, 352
  - in the higher-dimensional case, 740
  - instanton corrected, 739
  - instanton expansion of, 776
  - instanton-corrected, 543–545, 553, 555, 559–561, 568, 581, 739
    - , – expansion, 593

- large radius limit of, 236
- leading terms of, 529
- low energy, 175, 203, 215
- of chiral superfields, 211
- of massless multiplets, 203
- of **A**-model, 760
- of **B**-model, 760
- one-dimensional, 294
- periodic, 291, 326
- predictions, 449
- predictions of, 99
- predictions of, for rational and elliptic curves, 534
- series expansions of, 773
- singularities, 554
- three-point functions, 204
- topological values for, 496
- transformation properties of, 558
- unnormalized, 554
- unquantized, 385
- Yukawa couplings**
  - instanton-corrected, 802
- Z-orbifold**, 360, 379
  - construction, 359
  - toroidal, 360
- Zamolodchikov metric**, 653, 661, 702, 710
  - classical, 664
  - coincides with Weil-Petersson, 702
  - holonomy of, 701
  - Kähler function for, 653
  - left-invariant metric, 702
  - non-flatness, 701
  - on the moduli space, 652
- Zariski-Lipman Conjecture**, 388
- zero instanton sector**, 656, 660
