SHARE Feel free to use this PL SQL Developer Resume example to update your own resume. Even though this is a free resume example, it is important to adjust your own resume to present your relevant work history and skills according to the job you are applying for. Our resume examples are written by certified resume writers and is a great representation of what hiring
managers are looking for in a PL SQL Developer Resume. Use this example for reference as you create your own resume or use this easy resume builder that will guide you through every step of your building your resume in just a few minutes. Tommy Gonzalez 3411 Amethyst Drive Lansing, MI 48911 (555)-555-5555 [email] Job Objective Seeking a challenging and rewarding
position as a PL SQL Developer. Highlights of Qualifications: Huge experience in developing Oracle PL/SQL packages and object types Good expertise in Unix and Shell programming experience Thorough knowledge of front-end reporting tools Proficient in Java, .Net, Flex and PowerBuilder Solid understanding of inheriting PL/SQL object types, casting PL/SQL object types into
descendant types, converting PL/SQL object collections into a result set, bulk operations and pipelined functions Exceptional programming skills Professional Experience: PL SQL Developer Mingle, Inc., Lansing, MI July 2006 – Present Created and maintained PL/SQL scripts and stored procedures. Designed, developer Mingle, Inc., Lansing, MI July 2006 – Present Created and maintained PL/SQL scripts and stored procedures. Designed, developer Mingle, Inc., Lansing, MI July 2006 – Present Created and maintained PL/SQL scripts and stored procedures.
processes and ensured that data is properly loaded and extracted in and out of our systems. Investigated data quality issues and implemented programming enhancements. Developed technical system documentation. Documented code in
accordance with company policies, company standards and industry best practices. PL SQL Developer Spoof Corporation, Lansing, MI May 2002 – June 2006 Developed, tested, debugged and documented Oracle PL/SQL packages and types in accordance with company policies, company standards and industry best practices. Assisted in the conversion of existing PowerBuilder
code to PL/SQL and Java to support a new Flex application. Tested coding modification and system testing to minimize errors and downtime. Translated business requirements into technical requirements and delivered application and system testing to minimize errors and downtime. Translated business requirements. Maintained versioned code in Subversion in accordance
with company policies, company standards and industry best practices. Designed, coded, tested, and debugged enterprise wide applications. Education Bachelor's Degree in Computer Science Abilene Christian University, Texas, TX 1.0.0Version 660Download 1File Count March 1, 2021Create Date March 1, 2021Last Updated Companies that believe in bots Research and
prototype new technologies as appropriate Work with the team to provide a second line support capability, although most issues will be a need for out of hours support team there will be a need for out of hours support team there will be a need for out of hours support team there will be a need for out of hours support team there will be a need for out of hours support team there will be a need for out of hours support team there will be a need for out of hours support team there will be a need for out of hours support team there will be a need for out of hours support team there will be a need for out of hours support team there will be a need for out of hours support team there will be a need for out of hours support team there will be a need for out of hours support team there will be a need for out of hours support team there will be a need for out of hours support team there will be a need for out of hours support team there will be a need for out of hours support team there will be a need for out of hours support team there will be a need for out of hours support team there will be a need for out of hours support team there will be a need for out of hours support team there will be a need for out of hours support team there will be a need for out of hours support team the need fo
role) Participate in all aspects of the software development process including, requirements, designing, coding, unit testing, quality assurance, and deployment Assume responsibility for issue resolution for production systems and provide tier 2-3 production support Minimum of 5 years experience in SQL based application development Strong database development experience
using Oracle 11g Experience in SQL & PL/SQL modules such as packages, procedures, functions and other database objects ETL concepts and data quality controls Experience with Experience working in Anti-Money Laundering (AML) Mantas and the Financial Services Data Model desired Scenario development and customization Data structures, data mining and data ingestion
processes Threshold setting Strong experience in Unix/Linux and Shell scripting Implementing quality guidelines, standards, and procedures Proven ability to successfully manage relationships between multiple clients and prioritizing their needs while maintaining the overall health of the systems Develop solutions using SQL, Java and Stored Procedures Master a complex
financial data model in order to efficiently extract data for delivery to downstream systems and end-users Build subject matter expertise in the Agency Loans and Loan Trading businesses Translate business requirements into efficient software solutions Resolve issues by performing root cause analysis, coding immediate solutions, and documenting and recommending long-term
improvements Work collaboratively in an Agile Feature team; actively participating in all Scrum ceremonies Build new skills in order to contribute as a multi-functional team member (potential areas of focus Business Objects, QTP, Business Objects, QTP, Business Analysis) 5 years of IT development experience
(SQL/PL) Strong Java/J2EE skills Knowledge and experience with Spring framework 3-5 years experience working in a financial services environment including previous experience - SQL, SQL/PL, Scripting Technologies (PERL, REXX),
Java/J2EE, Spring, Oracle, Subversion Previous experience with the Agency Loans and Loan Trading business Development and maintenance of configuration control policies to identify Hygiene breaks, using SQL Stored Procedures Production of reports using SRS, to show Hygiene breaks and trending to show remediation progress Development and maintenance of database
feeds and ETL processes, leveraging tools such as SSIS Development and maintenance of a Web based application, built using ASP .Net / C# T-SQL programming ASP .Net / C# T-SQL programming ASP .Net / C# MS SQL Server 2008/2012 Strong Data Analysis MS Office (particularly Excel) Good communication (verbal and written) Broad Infrastructure knowledge (Unix/Linux/Wintel/Database) Analyze and
develop deep expertise of JPMorgan Private Bank supervisory risk business processes, requirements, data, and technology products Support production rollouts of the functionality on-site by partnering closely with the Operate team 5 years application development experience Must have excellent analytical, technical, and oral communication skills Excellent interpersonal skills
necessary to work effectively with colleagues at various levels of the organization Design, implement, test & maintain major scalable Sybase T-SQL components Define new product features in conjunction with product management & provide specifications Ensure quality & completeness of the product through unit testing, documentation & maintenance Provide 2nd or 3rd line
support capability Partnering with global teams to achieve successful business delivery Knowledge of Sybase T-SQL or Microsoft MS-SQL Strong ability to write & maintain stored procedures Strong database analysis & design skills Data Modelling tools/Diagrams/Documentation Competence in Unix/Linux environments Experience working on mission critical high performance
systems A firm focus on quality & high attention to detail Bright & enthusiastic, self starter, highly motivated, comfortable taking the initiative and bringing ideas to the table Ability to work independently or with others within a distributed global development team, and to deliver within strict timelines Be flexible and adaptable Build strong relationships with key business and technology
partners inside and outside the platform and infrastructure team Partner across finance to develop and optimize data mining and analytics Develop clear and concise reports that identify strategic information and provide recommendations for
performance improvement Lead MIS initiatives/ impacts and results discussions Work within the existing data infrastructure to enhance the data available in our repository and optimize ongoing processes Partner with finance and MIS teams to ensure the consistency and accuracy of data and reporting Quickly respond to fire-drills and analysis requested by management 2+ years
advanced experience in database development (e.g. database creation, database changes, creation, database changes, creation SSIS packages and SSRS reports) 3+ years of information analysis, insights development, and executive reporting Advanced
experience with MS Office tools (Excel, Powerpoint, Word) and Visio Oracle Essbase experience is a plus SQL Server DBA certification is a plus Visualization experience is a plus Designs, codes, tests and debugs complex, multi-tier enterprise level applications Provides active production support during release upgrades Ability to quickly understand
and convert business requirements into functional specifications Works with other team members to design and implement application features, including user interface, business functionality, and database access Strong technical and programming skills in Core Java and J2EE technologies Hands-on experience on database involving SQL, Stored Procedures, Functions as well
as some experience with ETL Candidates with experience in ETL tools (Talend), reporting tools (Talend), reporting tools (preferred 5-7 years experience in Java, J2EE technologies with hands on experience on databases development using SQL, reporting tools (preferred 5-7 years experience with ETL Candidates with hands on experience on databases development using SQL, reporting tools (preferred 5-7 years experience with hands on experience on databases development using SQL, reporting tools (preferred 5-7 years experience with hands on experience on databases development using SQL, reporting tools (preferred 5-7 years experience with hands on experience in Java, J2EE technologies with ha
SMC for Products, PMC for Pricing and distribution of Product and Pricing data to Matrix, Sequel, RTI and PB applications Domain translation of the data from legacy sources to *MC Interface with business on gathering requirements Update senior technology and business management on the status Programming experience in Database Oracle & SQL Server and ETL tools
Experience in designing and implementing applications using different ETL tools e.g. Ablnitio and Talend Strong Database knowledge and experience of working in split site teams Need minimum 3 years financial industry experience
Demonstrated effective communication, analytical and problem solving skills Strong customer service focus Ability to adapt in a dynamic work environment and make independent decisions Have a willingness to work in a high pressured environment and make independent decisions Have a willingness to work in a high pressured environment and make independent decisions Have a willingness to work in a high pressured environment Respond well in extremely high pressure situations by demonstrating ownership and delivery capability Degree level in an IT
oriented subject is advantageous Prior client-facing role (Internal/External) 5 years' experience with MS SQL 2012 3 years of large scale Business Intelligence project design experience with MS SQL 2012 3 years designing and building ETL Solutions using SQL Server Integration Services (SSIS), 2008 acceptable, but prefer experience with 2012
3 years building OLAP databases using SQL Server Analysis Services (SSAS) Querying Microsoft SQL Server 2008 / 2012 Building required database structures and objects Developing data links and data loading scripts, including data transformations, reconciliations and accuracies Analysing
processes and related data and produce meaningful management information that meets requirements Looking for root causes in case of solution
failures In case of a solution failure take proactive role in fixing them Are an expert knowledge of T-SQL Have mastered SQL Server 2008 / 2012 Have good understanding of SSIS, SSRS, ETL and Data Warehousing Use MS Visual Studio 2010 / 2012 Have good analytical skills Have a participated in all phases of Software Development Lifecycle (SDLC) Have a degree
in Computer Science or Information Management Might be MCSE in Business Intelligence (2008/2012) or Data Platform (2008/2012) Participate in design reviews and provide input to information/data flow, and understand and comply with architectural standards in all phases
Document the detailed application specifications, translate technical requirements into programmed application modules and develop/enhance software application specification specifications, translate technical requirements into processing and develop/enhance software application specifications, translate technical requirements into programmed application modules and develop/enhance software application modules Minimum of 5 years of experience in Application modules Minimum of 5 years of experience in Application modules and develop/enhance software application modules and develop/enhance software application modules Minimum of 5 years of experience in Application modules and develop/enhance software application modules and develop modules and develop modules and develop modules and develop modules are application modules and develop modules and develop modules are application modules and develop modules and develop modules are application module
Performance tuning is a must) Minimum 5 years experience with Control-M Experience with working in data-warehousing/data-marts is a must Excellent verbal, written, interpersonal, organizational and time management skills Responsible for all phases of application programming and processes for diverse development platforms,
computing environments (e.g., host based, distributed systems, client server, software, technologies and tools, etc.) Works closely with staff to identify application development software alternatives, or integration of purchased solutions or a combination of the available
alternatives Documents, tests, implements and provides on-going support for the applications Design software or customize software for client use with the aim of optimizing operational efficiency; must utilize approved Software or customize software for client use with the aim of optimizing operational efficiency; must utilize approved Software Development life cycle methodology Strong leadership skills, ability to mentor development teams, and ability to work independently are a must Previous
knowledge of Securities and Fixed Income Derivatives are a plus The candidate must have a minimum of 5 or more years' experience with Systems Analysis, Design, and Development, with a mastery level knowledge of all aspects of the software development life cycle or relative job experience The candidate should have 5 or more years of experience programming MS SQL 3+
years' experience documenting and maintaining business requirements, creating functional specifications, system and user acceptance test plans Executing and managing system test efforts Bachelor's Degree (or comparable experience developing applications) Write high performing SQL (DML, DDL), triggers, stored procedures, and packages Minimum of 4-8+ years of
diversified experience working with ORACLE, SYBASE, SYBASE IQ, and potentially with other database management systems Strong programming experience in PL/SQL and UNIX Shell Scripting Familiarity with Oracle and Sybase replication is desirable Knowledge of principles of object-oriented design and Java language is a plus The individual must have experience working
in test-driven and highly iterative environment Rapidly learn applications in the Credit Risk technology environment Work with the development appropriate technical solutions for databases Design low level technical solutions for databases Design low level technical solutions for databases Design & system architecture skills to
ensure continual increase in performance and stability of the databases Document detailed design of the databases Work with DBA's to get change requests implemented Work with global technology team to understand data model and suggest improvements Work well within any team Understanding of MSSQL DB Architecture & RDBMS concepts Good knowledge of Structured
Query Language In-depth experience on MS SQL as part of a development role Understanding of database concepts like replication, mirroring General understanding of the full SDLC lifecycle including both Waterfall and Agile methodologies Willingness to broaden skill sets and learn a secondary technology where necessary Ability to contribute independently P&L Reporting;
Balance Sheset Reporting; Finance & Product Control Regulatory applications Price Valuation reporting In/Out interface layers to the banks General & Trading Ledger Support applications across MS technologies Prime tech (C#, WFC, SQL Server) Secondary tech (ASP; VB6; Excel/Access VBA) Deliver production fixes to scope and schedule, quality checks evidenced by unit
tests Liaise with BAU Development Manager with weekly status reports as well as setting the correct level of expectation Interact with different IT business areas, when dealing with x-application interfaces (eg Front Office feeds), as well as release and
production support teams Resolve testing defects promptly, and maintain an acceptable failure rate for delivered production support to the Application Support Team for issues needing assistance by the BAU development team, as needed.
Development/Support split is expected to be 50/50 Proven development experience in an investment banking environment. Exposure to Finance applications is preferred Well-versed practitioner of waterfall and agile SDLC
methodologies Solid understanding and application of TDD and continuous integration concepts. Exposure to TeamCity and Subversion useful Self-motivated and strong problem solver. Ability to work independently or as part of a team MS SQL developer in Business Intelligence development Strong experience and knowledge of Microsoft SQL Server Solutions for BI, SQL Server,
Reporting Services (SSRS), Analysis Services (SSAS), Integration Services (SSIS) Comprehensive data warehouse analysis and design experience, with full knowledge of data warehouse methodologies and data modeling Experience working with Visual Studio 2008
BIDS Experience with ad-hoc reporting, business dashboard, data visualization, and other tools that are required to make BI results and self-motivated, high performance contributor in a rapidly moving business with tight deadlines and imperfect procedures and requirements Tight focus on results and self-
improvement with a desire to drive our business' analytic capabilities and knowledge forward Program complex SQL server procedures and develop SQL Server Reporting Services Investigate and resolve application functionality related issues and provide first level
support and troubleshooting SQL Server applications Troubleshoot technical issues and identify modifications needed in existing applications to meet changing user requirements Analyse data contained in the databases and identify modifications reeded in existing applications to meet changing user requirements Analyse data contained in the databases and identify modifications reeded in existing applications to meet changing user requirements Analyse data contained in the databases and identify modifications reeded in existing applications to meet changing user requirements.
                                                       operations, user guide, etc MS SQL Server platform .NET development skills Strong working knowledge of Microsoft Office platforms (eg: Excel, Word, Outlook, PowerPoint, MS Project, SharePoint) T-SQL, Stored procedures and functions Banking experience 5+ years of professional experience as an ETL development skills Strong working knowledge of Microsoft Office platforms (eg: Excel, Word, Outlook, PowerPoint, MS Project, SharePoint) T-SQL, Stored procedures and functions Banking experience 5+ years of professional experience as an ETL development skills Strong working knowledge of Microsoft Office platforms (eg: Excel, Word, Outlook, PowerPoint, MS Project, SharePoint) T-SQL, Stored procedures and functions Banking experience 5+ years of professional experience as an ETL development skills Strong working knowledge of Microsoft Office platforms (eg: Excel, Word, Outlook, PowerPoint, MS Project, SharePoint) T-SQL, Stored procedures and functions Banking experience 5+ years of professional experience as an ETL development skills Strong working knowledge of Microsoft Office platforms (eg: Excel, Word, Outlook, PowerPoint, MS Project, SharePoint) T-SQL, Stored procedures and ETL development skills Strong working knowledge of Microsoft Office platforms (eg: Excel, Word, Outlook, PowerPoint) T-SQL, Stored procedures and ETL development skills and ETL development skills are skills as a stored procedure and ETL development skills are skills as a stored procedure as a stored procedure and ETL development skills are skills as a stored procedure as a stored procedure and ETL development skills are skills as a stored procedure as a stored
Data Warehousing environment; hands on experience with Informatica is a must Experience with Agile Methodology is preferred Proven ability to work with a project team to develop a strategy, technical solution, and ultimately to implement high quality
technical solutions Proven ability overseeing deployments and Release Management including the final production acceptance review and signoff Experience with trade, position and asset master data formats is a plus Respond to and resolve operational issues that have been escalated from level 1/2 ops, participating in rostered support shifts and on call as required Manage
Sharepoint 2010, SSIS 2008 and SSAS 2008 production, test and development servers Bug fix and release including code changes, technical documentation New development as scoped and requested by the business 6+ SQL developments 4+ SQL
Server Analysis Services (SSAS) 4+ SQL Server Reporting Services (SSAS) 5+ Years experience in advanced features of SQL Server, Sybase and Oracle 5+ Years experience Design, implement, test and maintain major Sybase T-SQL components of the products Implement back-end components of an n-tier application, including data model,
data access objects, and application logic (good experience of data modeling, finding good key for objects, knowing when and where to denormalized etc) Define new product features in conjunction with product management, and provide specifications Extensive data modeling and understanding of object modeling Strong knowledge of relational databases Knowledge in a data
visualisation tool (Tableau etc) would be an added advantage C#/.net skills would be an added advantage 5+ years of Management experience yorking with SQL Server 2008 R2,
programming queries, and stored procedures Ability to analyze and interpret data to create an efficient delivery process for clients (both senior management & external) Ability to use
advanced analytical methods and tools to validate the results for accuracy Able to properly document (functional & technical) source to target mappings, process flows, and business requirements. Solid facilitation skills to gather the necessary information to document and/or develop a plan - strategic/tactical Strong organizational and multi-tasking skills are critical Previous
programming experience on Oracle and/or MS SQL Server is required - or related technologies that encapsulate SQL Managing key data sources & inputs Providing guidance on the design, development, and implementation of automated processes Bachelors degree in Computer Science, MIS, Finance, Accounting, Mathematics or related area 3+ (5+ Sr.) years of Business
Analysis, Process Improvement, or Project Management Experience 2+ (4+ Sr.) years of Mortgage/Banking/finance analytical support experience preferred, but not mandatory Solid understanding of the development (SDLC) or project life cycle, which includes all phases from discovery/analysis through implementation Strong background in SQL, SAS, and/or Oracle environments
is highly desired - (use of tools like Toad & SQL plus are preferred) Advanced analytical and quantitative skills Technology background (programming and/or tech writer) Strong working knowledge of MS Excel and advanced data manipulation functions (Pivot Tables, VLOOKUP, ODBC, VBA) is preferred Total Experience of 4 to 6 years in which relevant experience of 3 years on
SQL Server Enterprise Database Relevant experience in relational databases, preferably in SQL Server Should have good hands on in creating Stored Procedures, Functions, Tables, Cursors, Hash tables and handling large data types Should have prior work experience and knowledge in Query Tuning, Database Tuning, Performance tuning and different indexing methods
Should have knowledge on working of Joins Should have experience in writing complicated queries Should have experience in writing complicated queries Should have experience in writing complicated queries Should have experience or knowledge in scripting
Should have prior knowledge and awareness about the ETL process and tools used in the industry Should have knowledge of using and decoding Explain plan Should be aware of designing concepts in Database Should have worked on Triggers, Views and table valued
functions Should have experience in Microsoft office tools Perl, SSIS and SSRS · BE/BTech/MCA & MBA with adequate industry experience - 3 to 4 years · Basic understanding of relational database such as Oracle, MS SQL Server · At least 2 live implementations using SQL and PL/SQL in Oracle · Knowledge of best practices in SQL and PL/SQL coding ·
Knowledge of testing processes/methodologies · Good interpersonal, communication and presentation skills · Should be able to coordinate well with peers and seniors Experience in AML (Anti Money Laundering) Java programming & concepts Experience in 3-tier
architecture essential. Must have developed applications using a 3-tier model (must) Designing database structure, and developing stored procedures in SQL 2005, 2008 & 2012 (must) Coding to maximize performance --- concepts and developing stored procedures in SQL 2005, 2008 & 2012 (must) Endoughed applications using a 3-tier model (must) Knowledge of XML, SOA
architecture, TIBCO or MQ Series messaging (highly preferred) An understanding of secure coding concepts ? SQL injection, imbedded SQL, etc. (preferred) Financial Services Industry experience, especially Transfer Agency knowledge (highly preferred) Financial Services Industry experience, especially Transfer Agency knowledge (highly preferred) Financial Services Industry experience, especially Transfer Agency knowledge (highly preferred) Financial Services Industry experience, especially Transfer Agency knowledge (highly preferred) Financial Services Industry experience, especially Transfer Agency knowledge (highly preferred) Financial Services Industry experience, especially Transfer Agency knowledge (highly preferred) Financial Services Industry experience, especially Transfer Agency knowledge (highly preferred) Financial Services Industry experience, especially Transfer Agency knowledge (highly preferred) Financial Services Industry experience, especially Transfer Agency knowledge (highly preferred) Financial Services Industry experience, especially Transfer Agency knowledge (highly preferred) Financial Services Industry experience, especially Transfer Agency knowledge (highly preferred) Financial Services Industry experience, especially Transfer Agency knowledge (highly preferred) Financial Services Industry experience, especially Experience, experience Industry experience Industr
and drive teams/projects Work with other developers to facilitate creation of high performing data centric components and applications Create release scripts and document project requirements Design and develop solutions leveraging existing SQL Server and
Oracle databases to provide extracts, reports, and analytics Analyze and troubleshoot existing Data Transformation Service (DTS) packages and ETL processes to identify data inconsistencies and loopholes Design new and modify existing DTS packages and ETL processes to identify data inconsistencies and loopholes Design new and modify existing DTS packages and ETL processes to identify data inconsistencies and loopholes Design new and modify existing DTS packages and ETL processes to identify data inconsistencies and loopholes Design new and modify existing DTS packages and ETL processes to identify data inconsistencies and loopholes Design new and modify existing DTS packages and ETL processes to identify data inconsistencies and loopholes Design new and modify existing DTS packages and ETL processes to identify data inconsistencies and loopholes Design new and modify existing DTS packages and ETL processes to identify data inconsistencies and loopholes Design new and modify existing DTS packages and ETL processes to identify data inconsistencies and loopholes Design new and modify existing DTS packages and ETL processes to identify data inconsistencies and loopholes Design new and modify existing DTS packages and ETL processes to identify data inconsistencies and loopholes Design new and modify existing DTS packages and ETL processes to identify data inconsistency and loopholes DES packages and ETL processes to identify data inconsistency and loopholes DES packages and ETL processes to identify data inconsistency and loopholes DES packages and ETL processes to identify data inconsistency and loopholes DES packages and ETL processes to identify data inconsistency and loopholes DES packages and ETL processes and E
Oracle BI Publisher Create MS SQL Server Stored Procedures and PL/SQL packages Manage and maintain suite of existing SRS reports leveraged by Finance and customize existing Oracle ADF application using a combination of PL/SQL and Java Adhere to
source-code control policies using SVN and/or Microsoft TFS Work with business stakeholders to ensure complete delivery of project and support tasks Work with IT project managers and QA staff to deliver large-scale projects with attention to quality Ensure that consistent practices are followed to maintain the integrity of the systems Adhere to the company defined SDLC
process 5+ years SQL (scripting, triggers, stored procedures, query tuning) 5+ years designing and developing .Net applications 5+ years working with SSIS creating data extracts and ETL processes 3+ years working with SSRS creating reports 3+ years working with SSIS creating data extracts and ETL processes 3+ years working with SSRS creating reports 3+ years working with SSIS creating data extracts and ETL processes 3+ years working with SSRS creating reports 3+ years working with SSIS creating data extracts and ETL processes 3+ years working with SSIS creating reports 3+ years working w
an enterprise environment Ability to interface with business users to define project requirements Ability to clearly document business requirements 5+ years developing with SDLC processes including source code control, shared build environments, and defect management Demonstrated knowledge of working with various design patterns Bachelor's degree in Computer Science
(or equivalent) and 5 years related experience or equivalent combination Experience with small to medium Data Warehousing projects using SQL Server 2012 is a plus Experience supporting Accounting, Treasury or Finance departments preferred Previous experience supporting auto finance companies preferred Basic understanding of General Ledger and Finance systems a
plus Team work, interpersonal and organizational skills required to integrate with other teams Design and develop Microsoft SQL Server objects such as packages, procedures, views, materialized views, indexes, triggers for high-performing .NET transactional applications Ability to review and analyze existing SQLCode / Stored Procedures Design and develop SQL objects for
high-performing database batch processes Experience using SQL Server Integration Services (SSIS) and its features with in depth knowledge Database design for transactional and reporting applications Experience creating SQL Server Reporting Services (SSRS) to generate reports Delivery of work estimates for proposed changes, both small and large in scope Coding, testing
and Quality Assurance support for very complex SQL procedures Peer review of others' work Experience creating and reviewing ERDs, using ERWin Knowledge of Performance tuning is required Troubleshooting production issues Participate in the development
and review of documents to comply with SDLC methodologies [e.g. Engineering Work Breakdown Structure (WBS), estimation, Solution Design Document (SDD) and Software Architecture Documents (SAD)] Technical deliverables (i.e., code and documentation) on projects assigned Strong analytical skills and problem solving skills needed to manage multiple technical challenges
simultaneously per each project assigned Strong technical skills designing, developing, debugging, documenting, and implementing applications Strong knowledge and experience in all IT methodologies and policies, technical and business strategies as well as
organizational structure Knowledge of ASP, VB.NET, Microsoft SQL, PL/SQL Experience working in integrated development environments Experience working in integrated development environments Experience working in integrated development environments Experience working in integrated development life cycle Ability to conduct research into software-related issues and products Creativity in the case of Web or
interface design More than 650 investment professionals providing over 200 different strategies spanning the full spectrum of asset classes, including equity, fixed income, cash liquidity, currency, real estate, hedge funds and private equity Leadership positions in America, U.K., Continental Europe, Asia, and Japan Minimum of 7 years of experience in writing SQLs (Proficiency in
Stored Procedures, Triggers, Batch processing and Performance tuning is a must) Minimum 5 years experience with ORACLE and Sybase Experience with working on Agile/Scrum method of product implementation and delivery Knowledge of working with Green plum is a plus Knowledge of database encryption techniques is a plus SQL Server, including 2014. Background in
development, optimisation & problem resolution Data modelling They should have very good understanding of software development best practices such as test driven development, and how to use them to achieve timely delivery without compromising quality They should be highly self-motivated and able to work autonomously as well as on collaborative development efforts They
should have experience building high-availability, mission critical software and be prepared to provide support if and when it is needed They should have a very good understanding of the tools, frameworks, languages, principles and best practices required for the design and implementation of usable, reliable and maintainable large scale applications SQL Server database
development including Stored Procedures Background in table partitioning SSIS PETL build Demonstrate the ability to read execution plans and tuning methodolgy for SQL statements Develop, optimize, and maintain complex data and reporting solutions (creating tables, views, stored procedures, triggers, error handling, etc) Work directly with internal business customers,
project managers, and IT staff to understand requirements and execute the solution by leveraging the tools adopted within the organization Responsible for working with extremely large SQL Server data sources Plan, design, implement, develop, and support efficient and cost effective applications Provide technical guidance to other team members Adherence to security and
compliance standards Maintain documentation and versioning control Contribute to project estimation Contribute to project estimation Contribute to project estimation Contribute to project estimation Services
(SSIS) and SQL Server Analysis Services (SSAS) Experience in developing and optimizing reporting solutions using SQL Server Reporting solutions using SQL Server Reporting Services (SSRS) to author, manage, and deliver dynamic, interactive, drill down web-based reports Strong understanding of SQL Server Management Studio (SSMS) Familiarity with VB.NET and ASP.NET Strong analytical and product
management skills required Able to work independently as well as in a team environment Expert knowledge of Microsoft SQL 2008 and up Knowledge of web based development, .NET, C#, services IT Standards, Methodologies, SDLC, Agile Bachelor's Degree (Computer Science Preferred) or equivalent experience 4+ years of MS SQL Server experience developing SSRS
Reports 6+ years of hands-on database server development experience 4+ years of experience working with software development teams Knowledge of database design techniques for OLTP and data warehouse environments Expert SQL
Scripting and SSIS development skills SQL Server 2012 experience a must, 2014 a plus Strong troubleshooting skills and ability to work under pressure Strong experience in developme.nt and maintenance BI system Microsoft .NET and TFS experience is a big plus Maintain a complex database architecture Deliver high quality solutions, even in case where a "quick fix" may be
sufficient Improves performance of T-SQL stored procedures Write documentation for implemented changes Collect daily/weekly and monthly MIS form Operations' ownership Create and input quarterly Card Association MIS (VAOC, QMR) Follow up and support investigation of differences on daily/weekly proofs of accounts in Operations' ownership Create and
follow up daily GL reconciliation for HU and RO business Prepare month-end booking with supervision from unit 
improvement efforts and adapt to new business processes/procedures/products Ensure processes by providing macros or other tools complying with Citi rules and policies Participate actively in strategic business and operational
projects as per instructions from direct manager or the functional head Experience in card related, other operational or financial area is a strong advantage Knowledge and working experience in ECSPlus and Systematics banking applications is an
advantage Advanced knowledge of computering is an advantage Strong knowledge of MS applications is required (Word, Excel, PP, Outlook) At least basic level of English knowledge (both oral and written) Basic accounting knowledge of SQL
programming, Monarch SAS knowledge and VBA language knowledge is a strong advantage Providing development support to IT and business teams Collaborating with analysts and managers to identify, assess, test, and resolve reported
application and technical issues for RTS support and development projects Developing, testing, and deploying projects Writing technical specifications Ensuring all technical documentation and coding meets Paris standards Participating in off hours and weekend support when necessary Participating in peer code reviews to insure that code is developed correctly Working in a fast
paced environment where deadlines are aggressive Adaptability, flexibility and ability to work as part of a team or alone on a project Accepting responsibility and ownership of assignments Bachelor's Degree - BSCS, BS MIS, BS CIS or equivalent experience 3-5 years of experience designing and developing SQL stored procedures involving complex calculations, with at least 2
years of experience in SQL2005 or higher version and with increasing levels of responsibility and complexity Data modeling experience combined with real time experience designing relational database tables in SQL Server Excellent oral and written communication, development and project documentation skills Must be able to articulate complex application concepts in layman's
terms Strong analytical, debugging, and testing skills 2-3 years of experience in web based application development using C# with increasing levels of responsibility and complexity involving user interface development using C# with increasing levels of responsibility and complexity involving user interface development using C# with increasing levels of responsibility and complexity involving user interface development using C# with increasing levels of responsibility and complexity involving user interface development using C# with increasing levels of responsibility and complexity involving user interface development using C# with increasing levels of responsibility and complexity involving user interface development using C# with increasing levels of responsibility and complexity involving user interface development using C# with increasing levels of responsibility and complexity involving user interface development using C# with increasing levels of responsibility and complexity involving user interface development using C# with increasing levels of responsibility and complexity involving user interface development using C# with increasing levels of responsibility and complexity involving user interface development using C# with increasing levels of responsibility and complexity involving user interface development using C# with increasing levels of responsibility and complexity involving user interface development using C# with increasing levels of responsibility and complexity involving user interface development user in the complexity involving user in the complexity involving user interface development user in the complexity involving user in the c
experience in front end web development using HTML5 / CSS3 / JavaScript / jQuery Proven experience and understanding of the full software development life cycle, dynamics of applications development projects, and software
development practices Crystal reports or using similar reporting tool Informatica and UNIX experience 2012/2014 – SSRS, SSIS, SSAS PowerPivot and PowerView Windows operating systems SQL language and SQL software development Designing databases and modifying database designs, using ERDs Management and maintenance of SQL Server and other databases
Database Transition – assist in transitioning the existing databases, tools, and process documentation from the current contractor, and/or taking over the management of existing database architecture and design using entity-relationship diagrams
(ERD) and working with team software developers and customer technical personnel. Develop designed database and provide C&M – provide Continued operations and management under strict change control Ongoing database and provide continued operations and management under strict change control Ongoing database and provide continued operations and management under strict change control Ongoing database and provide operations and management under strict change control Ongoing database and provide operations and management under strict change control Ongoing database and provide operations and management under strict change control Ongoing database and provide operations and management under strict change control Ongoing database and provide operations and management under strict change control Ongoing database and provide operations and management under strict change control Ongoing database and provide operations and management under strict change control Ongoing database and provide operations and management under strict change control Ongoing database and provide operations and management under strict change control Ongoing database and provide operations are strictly operated by the strict change control Ongoing database and provide operations are strictly operated by the stric
environments Systems Security for the ICF DSEPD program as described below 5 years of experience providing MS SQL Server database design, development, and ongoing management and maintenance 3 years using MS SQL Server tools to administer
databases 5 years of experience architecting data and databases using ERDs and providing associated detailed documentation A minimum of five (5) years of experience as Windows system administrator, and an additional five (5) years of full-time network security and incident handling experience as Windows system administrator, and an additional five (5) years of full-time network security and incident handling experience as Windows system administrator, and an additional five (5) years of full-time network security and incident handling experience as Windows system administrator, and an additional five (5) years of experience as Windows system administrator, and an additional five (5) years of experience as Windows system administrator, and an additional five (5) years of experience as Windows system administrator, and an additional five (5) years of experience as Windows system administrator, and an additional five (5) years of experience as Windows system administrator, and an additional five (5) years of experience as Windows system administrator, and an additional five (5) years of experience as Windows system administrator, and an additional five (5) years of experience as Windows system administrator, and an additional five (5) years of experience as Windows system administrator and 
Experience managing vulnerability management tools, firewalls, intrusion detection systems testing and responding to network/computer intrusions and supporting inquiries. Knowledge of requirements for certification and accreditation of systems testing and evaluation,
and performance management methods Knowledge of test and assessment methods to evaluate security authentication technologies Knowledge of network operations and methods, and knowledge of the total infrastructure protection environment to integrate
information systems security with other security with other security disciplines. And Federal IT security hierarchy to implement higher-level security requirements such as OMB Memos and Presidential Directives Knowledge of the Federal information systems.
security community and hierarchy to ensure coordination of and/or collaboration on security activities Knowledge of systems or acquire network authorization as well as Authorization to Operate (ATO) Significant experience developing and maintaining databases with MS SQL Server and a complete
understanding of SQL Server and all related tools Proven experience with a wide variety of IT security, networking, and system administration tools Proven experience with federal security guidelines and regulations History of success preventing IT security breaches across applications and Excellent verbal, interpersonal and written communication skills Demonstrated outstanding
level of professionalism in providing administrative support, including ability to exercise good judgment, discretion, tact, and diplomacy Ability to organize and manage workload, meet deadlines, and respond to customer, user, and ICF requests Experience of scripting and Coding including .Net Framework and C# Stored procedure Link server Snapshot (a plus not required)
Replication (a plus not required) Oracle (a plus not required) In depth knowledge of the Microsoft print technology eco system Excellent systems planning and engineering skills Experience within the financial/investment banking industry preferred MCSE a plus Will be joining a SCRUM team of highly skilled professionals Will be heavily involved in analysing client requirements and
liaising closely with stakeholders Will also be involved in the continued building of this, alongside working on the Data Warehouse and will be involved in proposing new data packages (cube development) and reporting structures Will be using SSAS, SSIS & SSRS. The role will
involve technical backend data warehouse development and analytical reporting Will also be involved in database optimisation and tuning as required and help to build out the data warehouse Ability to understand and translate business requirements to IT and
also to the business leaders Ability to understand business requirements and translate them into technical solutions independently Bachelor's degree in Business, Economics, Finance or related consulting Analytical background Responsible for design, programming, deployment,
testing and maintenance of one or more applications using SQL/ASP.Net/C# technologies Ability to reference and understand system and application documentation without assistance from others Participate in application design sessions and provide valuable insights Use professional concepts and company policies and procedures to solve a wide range of complex problems in
creative and effective ways Closely working with development manager and onsite team to deliver solutions Strong OOPs fundamentals Experience in C#.Net, ADO.Net Secure coding practices Hands-on experience on Team Foundation Server/ALM
Working experience on agile development projects Good Analytics & Problem solving skills Development activities will include design, construction, testing, optimization, and deployment with all stages under the supervision of the team manager Support activities will require strong technical system and process knowledge along with good analysis skills Should be proficient coding
SQL mainly for Oracle, SQL server, Teradata and Vertica Databases. Also, should be proficient in writing batch scripts in UNIX and Perl using standard interactive interfaces The SQL Developer/Analyst will also need to be able to work effectively with business users to understand the nature of requests, define and address ambiguous requirements, and ensure accurate
information delivery. Finally, the SQL Developer/Analyst will work to improve data management processes and simplify the environment Design, develop, test, performance tune, and implement solutions that fit the current technology stack Expert knowledge of Transactional SQL (T-SQL) programming in Sybase or Microsoft SQL Server Source code control, ideally subversion &
clearcase Java experience, focused on back-end processing Python / shell scripting Interaction with business and team lead to understand the business requirements Produce high quality technical walk thro' to various stake holders (QA Team, UAT Team, etc.) Produce
high quality Technical & Release documents Experience in Analysis, Design, Development, Testing and Implementation (all phase of software development life cycle - SDLC) Very strong working experience in Analysis, Design, Development, Testing and Implementation (all phase of software development systems Good understanding of ETL and data warehousing concepts Excellent functional, analytical,
interpersonal and communication skills 6-8 years working experience in developing SSIS packages, SSAS cubes and stored procs on SQL platform, and the workflow of deployment Experience in creating technical design documents, including data modeling and flow diagrams Ability to write SQL queries on MS
SQL Server Database performance optimization would be an added advantage Bachelor's/Graduate degree in Computer Science Exceptional candidates who do not meet above criteria may be considered for the role provided they have the necessary skills and experience Work with business users to determine business requirements. Translation of these into functional/ Non-
functional requirements for the development team Clear and concise documentation of complex process flows, business requirements, acceptance criteria and testing materials Actively participate in the management of the end-to-end project lifecycle, displaying a clear understanding of project delivery Work closely with the development team on both agile and waterfall processes
      troubleshooting, problem solving with the team Review high-level risks and determine resolutions Develop test cases and work with the business / test team to ensure execution Key participant in implementing new changes to production Relational database development experience preferably Sybase Strong technical background Delivery focused with a prover
track record in Software Development Worked in an Agile environment Ability to write SQL statements in order to analyze data Maintenance of development and running Performing ad-hoc requests related to
data/configurations/access/other Performing environments/applications upgrades Deploying environments/applications fixes, patches, improvements Analysing and solving incidents/problems arising, looking for root causes Coordinating change management process as of the internal process as of the internal process defined Monitoring access permissions via the front-end and the back-end "Owning" the
application from the tech perspective Background in enterprise level application support and/or management Background in data analysis, understanding of databases, servers Good knowledge of SQL; SSRS, SSIS - advantage Excellent knowledge of MS Office with a focus on MS Excel MS Visio, UML - advantage Experience with SQL Server Management Studio - advantage
Experience with SQL Server 2008 R2 / 2012 - advantage Educated to degree level in a technological / IT / business management discipline Ability to work with business stakeholders / customers to understand their requirements properly and being able to explain them to other tech members Ability to
produce template defined documents that will be issued for senior management sign-off and/or distributed across teams as a reference documentation for tech members and/or other stakeholders Write data base queries (in SQL) and write SQL to populate database tables Participate in designing and developing new Database schemas Participate in the design of a new important
Software as a Service (SaaS) Minimum of 2 years of relevant industry experience of PostgreSQL on Linux; Also experience of MySQL Track record of working with scalable database solutions (>100 GB database with tables of >10million rows.)
Excellent interpersonal, communication and organisational skills Amazon RDS would be an advantage but is not required Proficiency in Java or other in programming languages such as Ruby would be an advantage but is not required Third-party
product integration (installation, configuration and customization and customizations) System and data analysis, architecture, and design Data integration and workflow design Software development, test and maintain back-end tax processing solutions
Define new product features in conjunction with product management, and provide specification Work with the team to provide a second-line support team there may be a need for out of hours support team to provide a second-line support team there may be a need for out of hours support team there may be a need for out of hours support team there may be a need for out of hours support team to provide a second-line support team there may be a need for out of hours support team to provide a second-line support team to provide a second-line support team there may be a need for out of hours support team to provide a second-line support team there may be a need for out of hours support team to provide a second-line support team to provide a second-line support team there may be a need for out of hours support team there may be a need for out of hours support team there may be a need for out of hours support team there may be a need for out of hours support team there may be a need for out of hours support team there may be a need for out of hours support team there may be a need for out of hours support team there may be a need for out of hours support team there may be a need for out of hours support team there may be a need for out of hours support team there may be a need for out of hours support team there may be a need for out of hours support team there may be a need for out of hours support team there may be a need for out of hours support team there may be a need for out of hours support team there may be a need for out of hours support team there may be a need for out of hours support team there may be a need for out of hours support team there may be a need for out of hours support team there may be a need for out of hours support team there may be a need for out of hours support team there may be a need for out of hours support team there may be a need for out of hours support team there may be a 
Windows and Linux scripting Comfortable dealing directly with technical, business and vendor colleagues Hands-on software troubleshooting ETL applications such as Scrum, Kanban, TDD and BDD A passion for technology and a desire to innovate Ability to
work in team environments or independently when necessary Working as an MS SQL developer in Business Intelligence development PowerShell a plus Attention to detail and ability to work independently Strong interfaces / databases / programs and write
specifications to convert to another format Perform testing of new development Write requirements / documentation / tech specs Problem resolution of production issues on MS SQL database Perform testing technical and functional specifications Understanding of the
Commercial Bank processing a plus They should have experience building high-availability, critical software and be prepared to provide support if and when it is needed They should have excellent communication skills and be comfortable interacting directly with all levels of business user and stakeholder Banking or Finance background MDX Demonstrate the ability to read
execution plans and tuning methodology for SQL statements Be able to demonstrate process undertaken for plan stability Have an understanding of join types and conditions and their usage Minimum of two years of relevant industry experience Proven experience Proven experience of using MySQL, Ruby and Java Proven record of working with scalable database solutions Bachelor's degree in
Computer Science or Computer Engineering Prior related experience in SQL development 5+ Years experience in advanced features of SQL Server OR Sybase OR Oracle (SQL Server preferred) 5+ Years experience in writing/debugging complex SQL queries 5+
Years experience in database design, performance tuning 5+ Years of design, coding, testing and debugging skills 5+ Years experience working with SOL Server Integration Services (SSIS) using Visual Studio 2008 BIDS and new versions Experience working with
Reporting Services (SSRS) and Analysis Services (SSAS) is a plus Experience working with MDX is a plus Experience with ad-hoc reporting, business and business and business users is a plus Experience with MS SQL and ETL tools Text file management File validation
Text file conversion, preparation Data clean-up Script writing based on template and schema Data loading Report and follow up any issues found, solve technical problems Will be responsible for migration files validation Importing and converting the processes Finding
the solutions for errors in the processes to ensure proper migration Data Mining Answers ad-hoc information requests Reporting status Familiar with relational databases, preferably with MSSQL Good understanding of database table creation and data imports Hands-on experience with MS Excel, creating scripts from schema descriptions 2+ years' experience with SQL, text file
manipulation Good IT skills Good written and preferably spoken English Good problem solving, can work individually and in a group as well Accuracy, attention to details Planning and scheduling of all server maintenance Windows Client Engagement through weekly governance meetings
with the internal clients (Line of business infrastructure and application teams) Production of metrics, scorecards and reports showing remediation progress for infrastructure configuration and security issues Management of five application teams) Production of metrics, scorecards and reports showing remediation progress for infrastructure configuration and security issues Management of five application teams) Production of metrics, scorecards and reports showing remediation progress for infrastructure configuration and security issues Management of five application teams) Production of metrics, scorecards and reports showing remediation progress for infrastructure configuration and security issues Management of five application teams) Production of metrics, scorecards and reports showing remediation progress for infrastructure configuration and security issues Management of five application teams) Production of metrics, scorecards and reports showing remediation progress for infrastructure configuration and security issues Management of five application teams).
ongoing support of the data feeds and ETL processes Development and ongoing support of the database objects, e.g. stored procedures Managing the production release cycles using Scrum and Waterfall methodologies Production and security issues
Ongoing maintenance of the system and procedures documentation Strong SQL development (preferred but not essential) Broad infrastructure knowledge (Unix, Linux, AIX, Wintel, Database, Web, SAN / NAS, network) Ideal candidate would be
someone who comes from a DBA background but has moved into SQL Developer / Data Analyst roles 10-12 years of development experience with an IDE is needed (Visual Studio 2008-2012 / Eclipse) MS Integration Services (SSIS) including support
and development of full DW ETL Solutions Implementation of Data Warehousing Working in SQL production DBA Liaise with the Information Services team to ensure consistent application of database best practises across Calastone Maintain Calastone's reputation for high-quality service support and delivery Expert knowledge of using T-SQL, SSIS and SSRS (ideally worked on
SQL 2014) Experience of working in high transactional environment Knowledge of PostgreSQL server 9.x would be an advantage Knowledge of the .Net framework, C# Build out databases from the ground up, with a 70/30 Dev/ DBA split Enhance and improve existing databases within the business Design and develop data systems making specific determinations about the
systems performance T-SQL Development SQL Server Integration Services (SSIS), including support and development of full DW ETL Solutions SQL Server Reporting Services (SSRS), including support and development of full DW ETL Solutions SQL Server Reporting Services (SSRS), including support and development of full DW ETL Solutions SQL Server Reporting Services (SSRS), including support and development of full DW ETL Solutions SQL Server Reporting Services (SSRS), including support and development of full DW ETL Solutions SQL Server Reporting Services (SSRS), including support and development of full DW ETL Solutions SQL Server Reporting Services (SSRS), including support and development of full DW ETL Solutions SQL Server Reporting Services (SSRS), including support and development of full DW ETL Solutions SQL Server Reporting Services (SSRS), including support and development of full DW ETL Solutions SQL Server Reporting Services (SSRS), including support and development of full DW ETL Solutions SQL Server Reporting Services (SSRS), including support and development of full DW ETL Solutions SQL Server Reporting Services (SSRS), including support and development of full DW ETL Solutions SQL Server Reporting Services (SSRS), including support and development of full DW ETL Solutions SQL Server Reporting Services (SSRS), including support and development of full DW ETL Solutions SQL Server Reporting Services (SSRS), including support and development of full DW ETL Solutions SQL Server Report Server S
database performance Experience within a highly transactional environment PostgreSQL Server 9.x would be a plus General understanding of financial services, especially mutual funds Lead or undertake the development and implementation of complex, specialist or high risk projects Lead or undertake the review of existing systems and the development of new concepts or
strategies to support business needs ADO objects in the VBA environment (executing stored procedures and sCRUM IBM Rational Tools (RAD, RTC, RQM, RDA, RSA) Application design experience Framework technologies: Servlets, JSP,
Struts, IBM Dojo, EJB, JMS, JPA, Hibernate, JAXB, Castor, Apache POI, IBM ODF toolkit Participate in the development, support, and extending/future existing database systems, warehouses, and processes, and processes,
identify methods for transforming/cleansing data to meet specifications Collaborate with relevant stakeholders to understand business requirements and apply business logic to processes Provide work effort and timeline estimates. Communicate the status of projects to appropriate stakeholders Associate or Bachelor's degree in a relevant field such as computer science,
information systems, or related field, or 0 – 2 years of equivalent experience ldeal candidate has a solid foundation and strong interest in learning IT development Problem solving, analysis, and communication skills Proficient in SQL, MS SQL Server technologies including SSIS. Experience with SSRS and SSAS is a plus Experience with additional programming and scripting
languages such as C, C++, Python, Perl Experience writing/modifying stored procedures Experience importing/exporting flat files to/from database Self-motivated, able to work independently or in a team Develop a full understanding of each assigned client's configuration and requirements Provide technical leadership to staff developers regarding resolution of issues, both for
assigned clients and other issues as appropriate Act as liaison between development staff and client managers to understand business requirements for assigned clients/issues Meet regularly with client managers to discuss and prioritize issues. Be prepared to discuss
issue status and any information pertinent to current or upcoming client work. Follow up on agreed-upon actions Monitor developer progress on assigned issues and escalate resource allocation problems to manager Recognize and escalate issues which
apply to all (or several) clients and/or to our business overall Provide training and quidance on specific issues and/or technical aspects of our applications to developers as needed. Assist developers within obtaining appropriate resources to help them complete assigned tasks Assume ownership of technical issues for your assigned clients Assign issues to resources as available
May perform one or more of the following: Plans, designs, develops and tests software systems or applications for software enhancements and new products Designs web pages, including graphics, animation, and functionality#CD# develops infrastructure and applications related to pages 3 years minimum experience with SQL 2005 or higher versions Proficient in MS Office tools
(Word, Excel, PowerPoint) Experience with H&W administration technical, highly preferred Perform QA tasks to load, process and analyze data from different financial data vendors Create scripts with T-SQL for production deployment in a dynamic, cost-aware environment
Good experience of large, complex data migration projects Experience of working in an agile or lean software development environment Excellent working knowledge of T-SQL, SQL Server Integration Services and ETL processes and patterns Excellent working working
knowledge of data modelling, data management and data manipulation, code management and version control Excellent working knowledge of SQL Server Database Administrator skills Ability to understand business requirements and create software solutions that work
within agreed technical designs Ability to mentor other team members and transfer skills to them Self-motivated and willing to "do what it takes" to get the job done Partnering with infrastructure teams to setup and integrate the servers for the strategic IFS platform Work with application support to implement, deploy and support strategic IFS platform 3rd level support for existing
IFS legacy platform Many parts of our IFS platforms are specific to Geneva and have to be handled out of Geneva Integrate with the virtual IFS team distributed over Geneva, Nassau, New York, London, Glasgow Bachelors degree or equivalent degree in a technical or analytical field with preferred focus on Computer Science or Information Systems Good working knowledge of
SQL (i.e. MS SQL Server or Sybase) Knowledge in Perl, Informatica, Visual Basic 6 and CA Scheduler are a plus Microsoft Office (Excel, Word, PowerPoint, Visio, and Project) and VBA skills Strong interpersonal, relationship management, analytical and problem solving skills Highly disciplined individual, self-motivated, delivery focused with the ability to work independently and
multi-task while remaining focused on accuracy and attention to detail 3+ Years development experience ideally in the financial industry Knowledge of Systems Development Life Cycle process in a large international organization Some travel may potentially be required to Glasgow or Nassau Experience with Asset Management and/or Investment Banking would also be
advantageous Analysis of data and development of extraction routines from source systems in the format expected by the target platform Package the code appropriately and execution Act as a subject matter expert on the conversion process in front of
technology and business stakeholders Support production rollouts of the developed functionality by partnering closely with the Application Support and Infrastructure teams Potential other activities could include security setup and environment management Multiple years programming experience, preferably within the financial industry A Bachelor's degree or equivalent degree in a
technical or analytical field with preferred focus on Computer Science or Information Systems Advanced proficient with Unix Shell Scripting Proficient understanding of source code versioning tools and techniques especially SVN
```

and/or GIT as well as JIRA Knowledge and understanding of the systems development lifecycle (SDLC) is required. Including an understanding of Release Management procedures, deployments of modules into UAT and Production environments Some travel may potentially be required to Nassau or Geneva Prior experience in analysis and mapping of data between 2 systems

```
and the execution of data conversion would be advantageous Prior experience in large IT organizations with disparate technologies and hands on work to glue or integrate different technology stacks would be advantageous Bachelor's Degree in Computer Science, Information Systems Prior programming experience and Oracle development work Ability to learn technologies listed
in Role Desirables Prior experience with mainframe Experience with Informatica or similar ETL tool Prior experience with Data Warehousing and BI tools like Qlikview, Tableau Work in a multi-disciplinary team and ensure smooth running of various applications Understand the requirement, design and build the solution Learning of business Managing high volumes of user requests
and being able to prioritize multiple issues effectively Bachelor's Degree in computer science or information systems, equivalent work experience or training certification 5+ years of experience and systems development methodology 4-6 years of experience in systems development, coding and
testing Current hands-on experience with MS SQL Server 2008 to 2012 Excellent customer service and verbal communication skills Strong analytical, logical thinking, teamwork, and written communication and index strategies Experience with Team
Foundation Server for managing issues/work items and version control Exposure to a programming language Document DB / Mongo DB OLTP database design SQL Replication SSIS / ETL Technical design and coding of new features and components Performance tuning and optimisation As part of an agile/scrum team working with the development team on release scripts and
deployments 4-5 years' experience developing with MS BI technology stack specifically TSQL and SSIS Experienced in developing new, and enhancing existing data models Experience working with MS BI technology stack specifically TSQL and Optimization (PTO), using native monitoring and troubleshooting tools Excellent knowledge of indexes, index management and
statistics Strong skill in configuring and supporting software applications, Strong knowledge in writing complex SQL queries, Advanced ability to effectively recognize and manage interpersonal communication needs, Ability to work as part of a cross-cultural
team including flexibility to support multiple locations when necessary, Able to work independently or as part of a team Good understanding of Loan IQ and batch processes is an added plus Relevant experience to support infrastructure, monitoring batch processes and troubleshoot infra
related issues Sound knowledge on Windows/Unix operating systems Strong knowledge on SQL and shell scripting 4+ years of current experience in Database Management Software, case tools, and systems development methodology; 4+ years of current experience in Database Management Software, case tools, and systems development methodology; 4+ years of experience in Database Management Software, case tools, and systems development methodology; 4+ years of experience in Database Management Software, case tools, and systems development methodology; 4+ years of experience in Database Management Software, case tools, and systems development methodology; 4+ years of experience in Database Management Software, case tools, and systems development methodology; 4+ years of experience in Database Management Software, case tools, and systems development methodology; 4+ years of experience in Database Management Software, case tools, and systems development methodology; 4+ years of experience in Database Management Software, case tools, and systems development methodology; 4+ years of experience in Database Management Software, case tools, and systems development methodology; 4+ years of experience in Database Management Software, case tools, and systems development methodology; 4+ years of experience in Database Management Manag
work experience or training certification Current hands on experience with VB Scl Server 2008 to 2012 Experience with VB Scripting Previous experience with PowerShell, Control M Analyzes business requirements and makes recommendations towards the development of new
code or reuse of existing code Obtains and evaluates information on factors such as reporting formats required Minimum of a B.S. in Computer Science, MIS or related degree and five (5) years of related experience experience experience including two (2) years of T/PL-SQL development experience or a combination of education, training and experience experience including two (2) years of T/PL-SQL development experience or a combination of education, training and experience experience
project management, enterprise implementation, leadership experience with SSIS, SSRS, SSAS Proven experience in .Net framework, IIS 7.0, SQL Server 2008/2012 Provide day to day technical administration including upgrades and
release management, analyzing log files, configuration file changes, installation and configuration documents (runbook), upgrade validation/testing, change control, and technical issue/problem resolution Work with project manager in planning and estimating throughout the complete life cycle; Identify and evaluate alternatives and present the most efficient and cost effective
solution May act as Project Leader and/or may be involved in providing assistance and training to less senior developers Work with service, maintenance, and issue resolution Minimum five years of diverse work experience in systems analysis,
software development, specifically in SQL Server 2008r2/2012/2014 Bachelor's degree from an accredited college/university or equivalent work experience Experience with Visual Studio 2008/2010/2013, C#, and TFS, GIT or similar source code management tool In-depth and hands-on knowledge of the software development life-cycle, test scripting and deployment practices;
Experience with data warehouse best practices, design, and data modeling Must be skilled in organizing technical information based on reviewing meeting notes, business specifications, interviewing clients, architects and business analysts; Must have the ability to work effectively with clients, IT management and other team members Strong verbal/written communication, problem
solving, analytical and independent judgment skills to support an environment driven by customer service and team work; Ability to positively influence, mentor and be a credible source of knowledge to less experienced team members Design, build, and maintain MS SQL database and related T-SQL code Design and develop DWH reports Perform documented unit tests Support of
testing and production deployment Analysis of reported bugs and issues Experience in T-SQL and SQL development Solid understanding of MS SQL server administration and database architecture Experience using SSIS or other integration/ETL tools Familiarity with Microsoft Reporting Services (SSRS). Net development experience preferred but not required Experience with
automated testing platforms and unit tests Understanding of code versioning tools Ability to work in development team English language (both written and spoken) Develops SSIS Packages to load data from multiple sources Develops application based
upon those Partners with development teams/vendors to provide reporting on in flight software development projects Participates in Integration Testing and User Acceptance Testing (UAT) and Functionality Testing creates and manages documentation in coordination with software development teams/vendors Assists in the ongoing support of multiple application environments
Manage relationships with end user communities Research and learn new application & business intelligence technologies Perform business analysis as needed in delivery technology solutions 10+ years of experience in IT field Expertise in SQL (SQL Server, Oracle and Sybase) Fluency in MS Excel (Advanced), MS Visio, MS PowerPoint and MS Project Customer interfacing
experience - customer presentation Experience with reporting tool is a plus - Hyperion Interactive Reporting, SAP Business Objects, Tableau Educational Background Required Help write and optimize in-application SQL statements Ensure performance and availability of databases Prepare documentations and specifications Strong proficiency with TSQL and its variation among
popular databases Experience with relational databases Capable of troubleshooting common database sthat contain product, customer, pricing and transactions stores Must understand the different types
of joins, how SQL Server handles memory, IO, and interacts with the operating system Know how to interpret query plans without the use of the profiler or DB tuning wizard, be able to identify, create and execute opportunities for pricing
profitability improvements Work closely with Pricing Analysts to constantly improve our internal systems to experience developing highly tuned T-SQL Stored Procedures and functions 3-5 years of experience in database design including referential
integrity, with strong understanding of key data elements, table indexing and database tuning Experience with SSIS, SSRS, and SSAS with understanding of inter-platform data transfers such as Oracle to SQL Data Tools 2012 Ability to solve complex problems, strong
analytical skills and the ability to trace issues to the root source Highly motivated and self-directed; independent worker, self starter, ability to develop and execute on detailed design documents and work plans from high-level
requirements and specifications Able to work nights and/or weekends as required Bachelor's degree in Computer Science, or a related work experience Experience Experience developing highly tuned T-SQL Stored Procedures
and functions Ability to work nights and/or weekends as required At least 3-5 yrs experience with RDBMS and understanding of relation databases 1-3 yrs experience with close attention to detail Must collaborate well
with others and be team oriented Strong SQL and SSIS skills Strong health plan experience and ongoing interest in documentation Incumbant is expected to keep specification and mapping documents updated for ongoing process development Must have experience in a workflow process tool like JIRA; although much
of the work requires concentration and self-starter talent, this person has to be a team oriented person and participate in collaboration services (SSIS) Query optimization experience 2+ years ETL Development experience and development experience are development experience.
SQL Server administration and maintenance experience (not required) Microsoft SQL Server General understanding of Management of Third party software and relationships Flexibility and experience working as Individual Contributor and as
member of a Team General understanding of .Net Framework Fundamentals and Basics of C# programming Technical support/ problem analysis - provide solutions for business analysis (gathering requirements) System analysis (gathering requirements) System analysis (gathering requirements) Programming/Development – SQL Server, Oracle, Excel VBA Systems integration testing
(IT) and review Quality assurance (QA) review Provide status reports regularly with estimates of completion Assist and guide other team members in problem/project resolution and implementation Drive best in class process improvement and a continuous improvement and a continuou
using T-SQL, PL/SQL or SAS Expertise with database architecture and modeling concepts Demonstrated initiative to drive efforts from concept to implementation Strong aptitude for fact-based problem solving and decision making Team player with ability to solicit diverse ideas and viewpoints Strong database knowledge preferably Microsoft
SQL Server 2014 or Oracle 11i Stored procedures in SQL Server or Oracle Experience with Cognos BI, Tableau, WebFocus, MicroStrategy, Business Objects or Essbase Experience and strong working knowledge of technology and project management best practices and methodology
Strong work ethic with personal accountability Excellent customer service skills and experience Ability to manage time effectively Ability to stay focused while working on multiple projects 2 or more years experience working with SQL Server 2008 / 2014 Strong T-SQL skills, including relational database management knowledge, stored procedures, views, functions, and DTS / SSIS
packages, and code optimization Strong MS Excel skills. Proficient in VBA and Excel Macros .Net knowledge a plus Competent to work at the highest technical level Reviews progress and evaluates results Recommends changes in procedures Good project management skills, operating as part of a team organizing, planning and executing projects Help write and optimize in-
application SQL statements and objects Design, develop, and deploy SSIS and SSRS packages as required by multiple business units Monitor application versions Strong proficiency with Microsoft SQL 2008 and 2012 Expert level SSIS and SSRS
development Capable of configuring popular database engines and orchestrating clusters as necessary Familiar with tools (Idera and SQL Profiler) that can aid with profiling server resource usage and optimizing it Gathering & Analyzing the business requirements Conducting feasibility study or impact analysis, providing estimates Working closely with the testing team to defining
test plan and test cases Working closely with internal, external and vendor technical teams Providing support to end-users during User Acceptance Tests Providing and updating the documentation of the application Performing level 2 functional support Developing updating the documentation of the application Performing Some knowledge transfer to the support team Performing level 2 functional support Developing updating the documentation of the application Performing Some knowledge transfer to the support to end-users during User Acceptance Tests Providing and updating the documentation of the application Performing Some knowledge transfer to the support to end-users during User Acceptance Tests Providing Some knowledge transfer to the support to end-users during User Acceptance Tests Providing Some knowledge transfer to the support to end-users during User Acceptance Tests Providing Some knowledge transfer to the support to end-users during User Acceptance Tests Providing Some knowledge transfer to the support to end-users during User Acceptance Tests Providing Some knowledge transfer to the support to end-users during User Acceptance Tests Providing Some knowledge transfer to the support to end-users during User Acceptance Tests Providing Some knowledge transfer to the support to end-users during User Acceptance Tests Providing Some knowledge transfer to the support to end-users during User Acceptance Tests Providing Some knowledge transfer to the support to end-users during User Acceptance Tests Providing Some knowledge transfer to the support to end-users during User Acceptance Tests Providing Some knowledge transfer to the support to end-users during User Acceptance Tests Providing Some knowledge transfer to the support to end-users during User Acceptance Tests Providing Some knowledge transfer to the support to end-users during User Acceptance Tests Providing Some knowledge transfer to the support to the s
shell/batch scripts Developing MS Excel Macros using VBA Developing automated client electronic comms using ObjectIf Lune PlanetPress Developing using other tools as appropriate Ensuring ITEC standards are enforced Expected to maintain an up to date task list with an agreed priority set by the project Maintain regular contact with relevant stakeholders to keep them
informed of progress Discuss ideas, possible solutions and technical issues with team and line management Functional knowledge of the wealth management, custody, settlement and fund is an advantage Being able to read / write SQL queries Being able to read / write SQL queries Being able to read Conceptual and Physical Database Models Being able to write Excel VBA macros Being able to write simple Unix
and/or Windows batch scripts Being able to gather requirements and propose corresponding IT solutions Being able document procedures associated to any developed IT solutions Experience and understanding of a source control tool (e.g. Subversion) Understand the Software Development Life Cycle Experience of IBM iSeries and/or DB2 is an advantage Experience of
Unix/Linux operating system is an advantage Comprehends the functional and technical requirements of the project Able to fix modules /defects with no supervision required Designs database solutions which include but not limited to: design and creation of tables and views, entity relationships, data modelling, relationships and normalization Codes SQL scripts, stored procedures,
or reports Can optimize runtime performance of scripts, stored procedures and reports at the application and at the database design level Develops detailed flowcharts to show processing logic for medium to complex database programs Prepares documentation of solutions Bachelor's degree in Computer Science or related field At least 5 years of strong Oracle SQL experience
Strong Oracle SQL coding skills; experience in creating complex joins (inner and outer joins) using 5 or more tables Experience in Database Design and Data Modeling Can read and understand complex database diagrams and draw out table relationships Knowledge and experience in Oracle Analytic functions (Partition, Windowing, etc) Complete assigned tasks as directed in a
timely manner Perform data analysis on complex data sets to provide information and insight to management Follow the established standards, patterns and process Not afraid to seek guidance when needed to make good decisions Ability to work in a team based environment required Bachelor's degree in Computer Science or a related discipline preferred with a minimum of five
years' experience in reporting and data analysis, or the equivalent in education and work experience Expert technical understanding of ETL, BI, and SQL disciplines Strong Data Warehouse experience in Visual Studio 2010, 2012, and SQL Server 2012, including SQL Reporting Services SSRS/SSAS and
Development in C# (Microsoft .NET Framework) Advanced SQL development skills Advance C# skills with Object Oriented Background Proficient in dimensional database design or data modeling Experience using Tableau Software or other tool that handles dimensions
and cubes Contributes effectively as a member of the team; takes ownership of individual assignments and projects Develops codes and unit tests design sperforms analyses creates prototypes and documents completed designs Mentors and
directs the efforts of more entry-level Engineers Provides third tier support when required Contributes to the development and achievement of ABTG organizational goals and objectives Participates in activities such as reviewing marketing requirements Functions as task project or team leader when assigned; represents the organization on project teams and may perform
technical project leadership roles while fostering teamwork and collaboration within and across work groups Provides input for Software Development budgeting and understanding of business principles processes and technology Knowledge of physical database
structures; ability to analyze manage tune databases for performance; knowledge of relational database concepts; disaster recovery; best practices Good analytical conceptual and problem solving skills to evaluate business problems and apply knowledge to identify appropriate solutions Ability to communicate effectively both orally and in writing Strong organizational skills;
attention to detail Ability to use office equipment such as printers copiers and faxes ETL development, maintenance, and troubleshooting Develop SQL queries, views, stored procedures and functions to support data analysts throughout the department Develop and maintain SSIS packages for ETL and data integration systems Dimensional data modeling of ITIL and other IT
processes Database administration including performance monitoring, access management and storage management Deliver digestible information through various means (SQL Server™, Microsoft Access™, Excel™, Crystal Reports, PowerPoint™ and Tableau™) Partner with developers throughout the department to promote consistency and efficiency Partner with product
owners to ensure data capture is effective and reliable Create and maintain artifacts supporting Data Governance, Management, Delivery, and Analysis Promote and embrace Continuous Improvement Experience with ServiceNow™ ITSM Platform Experience with
SSAS, MDX, or like technologies Experience applying Mathematical (Statistical) concepts in data analysis Understanding of Big Data tools a plus Implementing large SQL Server client implementations Supporting High Availability clients
Responsible for Backup and Restore of MS SQL Server DB Proficient in Microsoft SQL Server Query Tuning 5+ years of prior work experience in Microsoft SQL Server stored procedures 5+ years of prior work experience in Microsoft SQL Server DB Proficient in Microsoft SQL Server Query Tuning 5+ years of prior work experience in Microsoft SQL Server DB Proficient in Microsoft SQL Server DB Proficient in Microsoft SQL Server Query Tuning 5+ years of prior work experience in Microsoft SQL Server DB Proficient in Microsoft SQL Server Query Tuning 5+ years of prior work experience in Microsoft SQL Server DB Proficient in Microsoft SQL Server 
implementing large SQL Server client implementations Experience supporting High Availability clients Experience with Backup and Restore of MS SQL Server DB Proven knowledge of Agile Methodology Develop tables, indexes, constraints Optimize database code by analyzing query execution plans Provide accurate and timely estimates for tasks Work with team to achieve
timely resolution of all production issues meeting or exceeding Service Level Agreements 3+ years of experience with T-SQL; writing complex queries, stored procedures and functions Data Types Heavy SQL Queries (must be solid) SQL server Database Development Financial industry is a plus Three to five years of
SQL development in MS SQL Server 2005/2008 Experience with table creation and design Experience with integration testing in the SQL environment Three to five years of experience writing and debugging stored procedures and triggers Experience using T-SQL The ability to create or further flesh out data models based on the available data feeds or to enhance an existing
model with new data sources Experience transforming data from one server to other servers using tools like Data Transformation Services (DTS) and Integration Services (Building Universes) Work closely with the Project
Manager, Lead Systems analyst and the Technical Development Lead to understand the requirements Develop stored procedures to create "edit reports and basic profile testing of data files as they are imported into the system Create and populate tables within the data system with data from external sources Document procedure development and assist others with the collection
of meta data for use in data dictionaries and other documentation for data system users Functionality Testing and bug fixes /issue resolution during the various quality assurance testing cycles Strong experience with SQL Server - Specifically SSIS and SSRS Experience with SAS Base Solid ETL knowledge Full data warehousing life cycle understanding Coding and fixing stored
procedures, triggers, functions, tables, constraints, logins, and roles Ability to review T_SQL code to increase SQL performance and database tuning strategies on a Windows 2008 platform Architecture design and implementation for Big Data Design Patterns Bachelors degree in Computer Science, Mathematics, or related discipline or equivalent work experience Ability to develop
complex stored procedures for data loading Ability to create/modify SQL Server Integration Services (SSIS) packages or other ETL tools Experience with Business Intelligence Development Studio (BIDS)/Visual Studio Strong ability to provide a high level of problem solving and technical troubleshooting skills Ability to work independently to meet objectives Technical writing and
process documentation Develop complex MS SQL Server queries, stored procedures, SSIS packages and custom tasks for performing data conversions (ETL) to load data from text/excel files, local database, and dynamic SQL Design and code all
aspects of solutions using Microsoft SQL Server best practices and industry standards Investigate and recommend enhancements to existing processes, database structures, stored procedures and future ETL functionality, database objects affected, specifications, and
flows/diagrams to detail the proposed implementation Master's degree in Computer Science, Engineering, or related field of study, plus at least 3 years of experience, employer will also accept a Bachelor's degree in Computer Science, Engineering, or
related field of study, plus at least 5 years of post-bachelor experience in the job offered or experience as an Analyst or related role All applicants must have at least 5 years of post-bachelor experience in the job offered or experience with: (1) ETL tool Microsoft SQL Server Integration Services (SSIS); (2) Microsoft SQL Server Reporting Services (SSRS); (3)
MS SQL server 2008 R2/2012; (4) SQL/T-SQL in developing stored procedures, function, Dynamic Sql queries, and Query analyzer; and (5) gathering and analyzing requirements Bachelor's or Master's Degree in the following fields: Computer Science, Information Systems, Software Engineering or equivalent Strong knowledge in Querying Microsoft SQL Server Strong ETL
knowledge Nice to know: SSAS Native Romanian, Fluent English, additional European languages is nice to have Driven for results Willingness to learn and acquire new skills Ability to set priorities and meet deadlines 3 or more years of SQL Server database development (SSRS), scripting language
experience, such as Powershell or Batch, C#, .NET Previous Healthcare experience Previous experience working in a group environment (SSRS) experience Successful candidate participates in all aspects of the design, development, implementation and
support of complex tools to support the DMO Tools team, using SQL, .Net, c# and related technologies Routine accountability is for technical knowledge and capabilities as a team member or as an individual contributor Candidate must be able to deliver solutions under minimal supervision in a distributed development environment Works on complex problems and with legacy
applications where analysis of situations or data requires an in-depth evaluation of various factors and strong attention to detail Computer Science degree in a related technical field and 5+ years' experience as an application developer or 3 years' experience and a Master's
 degree. 4 additional years of experience may be considered in lieu of a Bachelor's degree Must be able to work with design changes, develop, implement, maintain current personnel data within CDA and providing dental readiness data to MODS, MEDPROS, AKO, and the Air
Force as needed Perform database security tasks and database tuning, ensured database consistency, and created and maintained backups of critical databases Ensure the associated hardware resources are well- allocated to the databases and promote optimum performance and high availability Monitor the systems databases in order to make sure that services are secured
with a minimum downtime Monitor database management systems as well as evaluating database performance to maximize efficiency Work in an environment that practices strict change management Provide recommendations to application development teams for data restructuring and performing complex maintenance Knowledge of ISO/ITIL processes and documentation
standards is desired Preferred Qualifications Web applications development using HTML, ASP, VBScript, and JavaScript Ability to analyze tables in the database to establish knowledge of data for accurate retrieval and use in report writing Utilize available tools such as SQL, SQL Server Management Studio, Excel, SSIS, and SSRS to provide technical reports for operations and
multiple customers support Translate reporting requests in order to accurately meet the actual information and deadline needs of users Educate requestors as to appropriate and desirable parameters to ensure they get the information they need Provide support to end users on standardized and ad hoc reports Collaborate with the data architect and developers to provide
assistance and leadership around best practices in SQL Server Possess a SECRET to begin work on the contract Must be enrolled in CompTIA Continuing Education program Use SQL to pull inventory related data from various databases for each project or initiative Analyze the data / evaluate
various business scenarios Present a summary of data for the various options / scenarios to the business teams, and proposed initiative Based on feedback from the business teams, set up and drive the proposed initiative Based on feedback from the business teams, set up and drive the proposed initiative Based on feedback from the business teams, set up and drive the proposed initiative Based on feedback from the business teams, set up and drive the proposed initiative Based on feedback from the business teams, set up and drive the proposed initiative Based on feedback from the business teams, set up and drive the proposed initiative Based on feedback from the business teams, set up and drive the proposed initiative Based on feedback from the business teams and proposed initiative Based on feedback from the business teams and proposed initiative Based on feedback from the business teams and proposed initiative Based on feedback from the business teams and proposed initiative Based on feedback from the business teams and proposed initiative Based on feedback from the business teams and proposed initiative Based on feedback from the business teams and proposed initiative Based on feedback from the business teams and proposed initiative Based on feedback from the business teams and proposed initiative Based on feedback from the business teams are proposed initiative Based on feedback from the business teams are proposed initiative Based on feedback from the business teams are proposed initiative Based on feedback from the business teams are proposed initiative Based on feedback from the business teams are proposed initiative Based on feedback from the business teams are proposed initiative Based on feedback from the business teams are proposed initiative Based on feedback from the business teams are proposed initiative Based on feedback from the business teams are proposed initiative Based on feedback from the business teams are proposed in the business teams are proposed in the business teams are proposed in the bu
execute initiatives Manage business rules for each business rules from each initiative to inform / improve future business rules and present to the initiative sQL Expert Experience using database applications Strong Microsoft
Excel and Access skills Proficiency in the use of desktop applications and Windows-based programs Demonstrated ability to meet
deadlines while maintaining quality of work Communicates directly with business units to resolve project related issues Works effectively in a team environment Excellent listening, verbal, written and communication skills Minimum Education level required to perform job duties: Bachelor's degree with minimum 5 years of Information Technology, Data Analytics or other relevant
experience Design and manage the Data Warehouse, working with DBAs to achieve and maintain high availability and high performance of the Data Warehouse, working with DBAs to achieve and maintain high availability and high performance of the Data Warehouse, working with DBAs to achieve and maintain high availability and high performance of the Data Warehouse, working with DBAs to achieve and maintain high availability and high performance of the Data Warehouse, working with DBAs to achieve and maintain high availability and high performance of the Data Warehouse, working with DBAs to achieve and maintain high availability and high performance of the Data Warehouse, working with DBAs to achieve and maintain high availability and high performance of the Data Warehouse, working with DBAs to achieve and maintain high availability and high performance of the Data Warehouse, working with DBAs to achieve and maintain high availability and high performance of the Data Warehouse and maintain high availability and high performance of the Data Warehouse and maintain high availability and high performance of the Data Warehouse and maintain high availability and high performance of the Data Warehouse and maintain high availability and high performance of the Data Warehouse and high performance of the Data Warehouse and high performance of the Data Warehouse and high performance and high performance of the Data Warehouse and high performance and hig
related issues Master degree in information technology 3 to 5 years' experience in a similar role within a financial environment A good knowledge of financial instruments would be an asset Expert knowledge of SQL, SQL Server and data warehouse technologies Excellent verbal and written communication skills in order to interact with the business Fluency in English. French a
plus Ensure that data is clearly defined and refine the logical design of the database Map out of the conceptual design for a planned database in outline and write database issues Assist with the development of database utilities and automated reporting and set up data sharing
and disk partitioning Commission and install new applications Maintain data protection legislation Create, maintain, optimize stored procedures, database and ETL processes Work with all levels of development from analysis through implementation and
support Interact with report owners to establish/clarify their requirements and develop report specifications, backups or recoveries Orchestrate clustering and configuration of database engines IT or Database Management Qualification MCSE: (Data Management
and Analytics / Data Platform / Business Intelligence) preferred 6 – 8 years' work experience At least 4 years' experience in a relevant field 3+ years in general database development using MSSQL up through SQL2012 Possess a fair understanding of business data requirements Demonstrate problem analysis and logical solution formulation skills Display a strong client service
orientation Display good attention to detail Demonstrate good verbal and written communication skills Possess the ability to produce and use reports Possess the ability to produce and use reports Possess the ability to work with multiple stakeholders in the organisation and display excellent interpersonal skills, with the confidence to engage independently with stakeholders Strong technical skills across legacy and modern
technology stacks (sql/asp/asp.net) and across platforms (unix/windows) T-SQL/SQL Server experience essential SQL Server reporting services experience essential SQL Server Integration Services experience essential SQL Server reporting services experience essential SQL Server reporting services experience essential SQL Server Integration Services experience essential SQL Server reporting services experience essential SQL Server reporting services experience essential SQL Server reporting services experience essential SQL Server Integration Services experience essential SQL Server reporting services experience essential SQL Server reporting services experience essential SQL Server reporting services experience essential SQL Server Integration Services experience essential SQL Server reporting services experience experience experience essential SQL Server reporting services experience experie
development lifecycle (analysis through deployment) Excellent object oriented programming skills in multi-threading environment is a must Working knowledge of SQL using MS-SQL server or Oracle Demonstrated ability to work
effectively in a fast-paced, high volume, deadline-driven environment Familiarity with data modeling & database management (e.g., SQL, Sybase, DB2) Knowledge of Equities or Fixed Income trading is desired but not required 5+ years' experience writing T-SQL stored procedures, functions and triggers for SQL 2000, SQL 2005 or SQL 2008 Experience of SQL CLR stored
procedures, functions and triggers Sound knowledge of relational database design Experience of creating packages for SQL Server Integration Services Experience of creating reports for SQL Server Reporting Services Experience of creating reports for SQL Server Reporting Services Experience of creating packages for SQL Server Integration Services Experience of creating reports for SQL Server Reporting Services Experience of creating packages for SQL Server Reporting Services Experience of creating packages for SQL Server Reporting Services Experience of creating packages for SQL Server Reporting Services Experience of creating packages for SQL Server Reporting Services Experience of creating packages for SQL Server Reporting Services Experience of creating packages for SQL Server Reporting Services Experience of creating packages for SQL Server Reporting Services Experience of creating packages for SQL Server Reporting Services Experience of creating packages for SQL Server Reporting Services Experience of creating packages for SQL Server Reporting Services Experience of creating packages for SQL Server Reporting Services Experience of creating packages for SQL Server Reporting Services Experience of creating packages for SQL Server Reporting Services Experience of Contract Services Experience Server Reporting Services Experience Server Reporting Services Experience Server Report S
managed Experience with formal software testing and validation methodologies Experience with change and configuration control processes Excellent communication skills: in particular writing skills and an ability to communicate well across all levels Knowledge working with and managing of Service Broker Experience of programing, configuration or administration of SharePoint
Services or Share Point Server Experience of data model or report writing for CRM Experience with transactional replication Relevant Microsoft Certification (MSDBA, MCTS or MCITP for SQL Server) Relevant tertiary qualifications, i.e. IT and/or business SQL Server - 5 years of experience C#, VB.Net, or Java Source Control Agile, Scrum, Waterfall Develop and maintain
software systems using Microsoft .NET and SQL Server Diagnose and correct programming errors Develop and maintain T-SQL Queries, Store Procedures, Functions, Triggers, Views and development needs Work with other team members on design of
software systems Create, maintain and develop documentation excellent written and verbal communication skills, with the ability to cross-check work to user specifications Proficient working independently—with little direction—and as a supportive team member Accustomed to
fast-paced environments with simultaneous, high-priority tasks Must be capable of performing in a dynamic environment, handling multiple tasks simultaneously with the ability to work on multiple projects at any time Handle after hours IT production deployment/support Bachelor's Degree in Computer Science, Information Technology or 5+ years of relevant IT experience 5+ years
of software development experience 5+ years of experience 5+ years of experience using T-SQL with very strong working knowledge of stored procedures, queries and logical database architecture Understanding of object-oriented design, client-server architecture and relational
database design Knowledge of .NET Framework and ability to work with C# and ASP.NET Knowledge of client-side technologies such as JavaScript and HTML Experience with Microsoft Visual Studio and SQL Server Management Studio Ability to quickly understand business requirements and transform user requirements into queried reports / stored procedures Develop and
maintain solutions using SSRS and SSIS (including ETL Operations) Automate manual processes (both from application and SQL standpoint) Experience with SSAS, Data Warehousing and Data Cubes Experience using Team Foundation Server for source control and build management Able to work independently with minimal direction but also recognize the need and request
guidance Provide regular updates to manager Able to test and troubleshoot Able to stay motivated(self-starter) Adhere to access both SQL and DB2 databases and extract data VB.Net development 2+ years of experience
operating independently - being resourceful and analytical to problem solve 2+ years experience SQL programming and databases 1-2 years experience with Windows servers (2008 and 2012) and how to set up firewalls, user domain, and active directory Maintain and enhance the existing data warehouse, exports, and reports Manage Electronic Data Interfaces (EDI) Develop
vendor and client exports that meet provided specifications Provide business users the data required for metrics and analysis Migrate existing Access reports to SSIS/SSRS Advanced Knowledge of T-SQL SSIS/SSRS Experience in SDLC/Agile environments Back end SQL Server 2008 R2 (Creating Stored Procedures and views) Report/Analysis understanding using SQL or
Access Some understanding of C# development and VB.NET Assist with deliverables for application risk metrics in accordance with Citi's technology and security standards Tier 3 troubleshooting and execution tests Participate/Facilitate required software and hardware upgrade
requirements Experience with building unit test(s) or use cases in accordance with a supplied BRD or client request Minimize the impact of day 1 implementation issues for new releases Analytical skillset to assist in creating workflows that provide value to the end user Ensure development audit requirements are met A proven track record of successful delivery and implementation of
deliverables, preferably with a techincal based position Technically proficient in Microsoft Office products, MS Project and Visio Technically proficient in SQL, .Net, and Crystal Reports Experience working with a workflow application Experience in mutual fund/ fund accounting business a plus Experience in documenting User stories, business requirements, and proper acceptance
criteria Exposure to tracking tools such as ALM (Quality Center), and JIRA a plus Effective communciator, both written and verbal, to all levels of management Self-motivated, drives to closure Experience in solving production issues Bachelor's degree in Computer Science, Engineering, or related discipline, advanced degree a plus Thorough understanding of database modeling.
Data Analysis experience required Must have strong organizational skills. Must have ability to multi-task Focus on accuracy and attention to detail Strong analytical abilities and process oriented Bachelor's Degree (or higher) or High School
Diploma/GED with 4+ years experience SQL Development Role 3+ years of SQL Server database development 3+ years with T-SQL; writing complex queries, stored procedures and functions Experience with the following: Oracle, PL/SQL, Cognos, Data migration (SSIS), Automated report development (SSRS), scripting language experience, such as PowerShell or Batch, C#,
.NET Build end-to-end data solutions from ETL to analytical presentation using innovative and document requirements, agreements and changes with business users Complete and upload appropriate documentation for all work completed Lead continuous
improvement initiatives for both new and existing datasets Build cross functional relationships to drive strategic discussions and cross-channel partnerships for the acquisition of data Contribute to and work to meet project schedules by providing accurate estimates of effort required for development deliverables, by providing updates on project progress to development and project
management, and by escalating issues that might affect project success to management Utilize departmental Systems Development Lifecycle Methodology as a guide for developing MS SQL Server based data solutions Fluent in JIRA and Confluence
Experience with SSIS required, plus SSRS, SSAS, and multi-dimensional expressions preferred HTML5, JavaScript, Java, CSS, PHP, C#, ASP.NET, Python Bachelor's Degree in CS, Software Development or IT equivalent required, MS preferred Strong data analysis experience is required including soliciting data requirements, data mapping, lineage and transformation rules
Prior experience in Financial Services essential, preferably with Treasury, Finance and/or regulatory experience (i.e. Basel II & III, Dodd-Frank, etc.) Prior application development experience a plus(i.e. being a development experience and/or regulatory experience and/or regulatory experience (i.e. Basel II & III, Dodd-Frank, etc.) Prior application development experience and/or regulatory experience and/or regulatory experience (i.e. Basel II & III, Dodd-Frank, etc.) Prior application development experience and/or regulatory experience and/or regulatory experience (i.e. Basel II & III, Dodd-Frank, etc.) Prior application development experience and/or regulatory experience and/or regulatory experience (i.e. Basel II & III, Dodd-Frank, etc.) Prior application development experience and/or regulatory experience and/or regulatory experience and/or regulatory experience and/or regulatory experience (i.e. Basel II & III, Dodd-Frank, etc.) Prior application development experience and/or regulatory experience and/or regul
a developer who has been writing SQL for several years. This developer will be expected to write SQL queries SSIS/SSAS/SSRS- these skills are desired with SSAS being most important. There will be building of cubes, integrating dashboards, working with datamarts, as well as some reporting work Communication Skills- this group interacts with all levels of end users as well as
works with up 30 different business analyst. Also, the owners of the company come to this group for help from time to time Working with T-SQL queries, scalar and table-valued functions, and stored procedures Creating/maintaining SSIS packages and SSRS Reports Evaluate query plans, identify actual or potential performance bottlenecks, and propose solutions Design, code,
and test major features, as well as work jointly with other team members to provide complex software enhancements for databases Participate in code reviews in accordance to standards Interact with key partners and documentation to aid in maintenance and
code reuse in accordance with team processes and standards Contribute to next generation database schema design geared for performance, scalability, and efficiency issues A baccalaureate degree from an accredited college and four years of satisfactory full-time
experience related to the area(s) required by the particular position; or, Education and/or experience which is equivalent to "1" above Expert knowledge of Oracle 11g/10g, Shell scripting, Perl is desirable Experience in Excel / VBA development Responsible for creating tables, perform DDL changes, complex data migration using SQL & PLSQL to facilitate seamless application
development Apt at writing Oracle Functions, procedures, packages & trigger Experience with ETL and data integration, Data quality Experience with ETL and data modeling life cycle (business/conceptual/logical/physical) DBA skills are a plus but not required Familiarity with HA and
clustered deployment topologies, integration technologies Have strong written, verbal, and interpersonal, communication skills Experience is Table Design, relationships between them and created databases Must have written Sql stored procedures and functions Capable of handling all SQL Server Support, Networking tasks individually
and Independently Worked on importing/ exporting data from flat files to Sql Server using SSIS & ETL tools Building up new servers installing Team foundation Server, and expand large Sql databases with critical reliability and maximum uptime Possess
working knowledge in data migration and Sgl upgrades Performed table design and entity relationships between tables using Erwin tool Worked on different types of import / export such as bcp, DTS, SSRS Prepared SSRS reports for daily monitoring of data flow which shows how many files have passed during migration, how many files failed Compressed backups to
reduce disk space Good knowledge of ETL Tools Good Knowledge of Developing Web application using Asp, C#, SQL Troubleshooting Sql Performance issues MSSQL SQL Server management capability to perform at a very high level of technical competence
and maturity, dealing with multiple assignments and on-demand critical tasks Ability to work with stakeholders to ensure that plans and requirements are fully understood and issues are resolved effectively and efficiently Works well in a diverse and global team environment previous experience with cloud service deployments in either an laaS or PaaS environments Script language
development, such as Windows Powershell, Perl or JScript Previous programming skills Exposure to cloud computing (Azure, AWS), telecommunications, and/or existing in-vehicle systems (SYNC) Business/Systems analysis Mandarin language skills Exposure to cloud computing of web services
and mobile applications Security and Controls Plant Floor or other MFG experience with Pivotal Cloud Foundry Proficient with source code management systems (GIT, bitbucket, SVN, Plastic)
Experience in with deployment tools like Puppet, Ansible, Chef, or Salt Continuous Integration (CI) tools (CC.NET, TeamCity) Experience in build, deploy, troubleshooting and maintaining web services Experience and expert in at least two of these programming languages Python, Ruby, Perl, and Java Willingness to do some travel as needed ITIL/ITSM familiarity Willingness to
participate in off hours support rotation Open to working 12-8 some days and some weekends to assist with 24x7 global support coverage MIS or BS - Computer Science or equivalent experience Provide input identifying requirements by analysing existing solutions and data Good knowledge in MS SQL, SSIS and SSRS Ability to write code and documentation that's easy to
understand and maintain Experience in SSAS – advantage Experience in MS SQL administration – advantage Ability to work with business stakeholders and customers to understand their requirements properly and being a good team player Attention to details, driving
tasks for completion on your own Proactive problem solver having strong "ownership" in what you do SQL ETL: This role will have the ability to work with large and complex volume data sets and must have a clear understanding of the full database systems This position
demands both business analysis and reporting expertise with ownership of the business need for data quality assurance processes required to support critical business and integration and ETL experience with SQL Server Integration Services (SSIS) or other
industry leading tools Ability to configure SQL Server agent years of experience in designing and developing ETL processes including naming conventions, connection to variety of systems and processing of large volume of data 5+ years of experience in identifying and mapping data elements across multiple systems including creating templates and best practices to maintain the
mapping information Strong understanding of data integration, guality and validation Experience with SQL Reporting Services (SSRS) and Reporting tools (Excel, PowerPivot) 4+ years of experience extracting data from Salesforce.com database objects using API calls via SSIS, DataLoader, and other ETL tools; familiarity with SOQL (Salesforce SQL) Understanding of MDM,
Data warehouse / Data mart Experience with SQL Server in a VMWARE or AWS environment Experience Good with Data Warehousing Concepts 2-3 years of Tableau experience Excellent written and verbal communication skills and be able to interact with
multiple IT teams and business partners both formally and informally Clear understanding and experience with Microsoft platforms, including Windows operating systems for both desktop and server Knowledge of physical database administration with SQL Server a plus Experience in logical and physical data modeling Responsible for helping design, develop, debug and optimize
stored procedures and views producing data suitable for reporting purposes Experience With SSIS and SSRS essential Other than technical skills what does the person need to be successful Degree, Certification, Total Yrs of Experience Oracle Database SQL Certification Oracle Database SQL Certification Oracle Database SQL Certification 
indexes, hints, SQL Plans, baselines Assisting with moving data using Datapumps Helping to manage all service accounts and passwords (requesting new as well) 3+ years working on Linux or Unix Experience with SQL - Server, MySQL, Mongo
Background in development / scripting (BASH, PHP, PERL, JAVA, HTML, etc.) 5+ years working as a Database Admin 5+ years working with Oracle 5+ years working with Oracle 5+ years working an alytical thinking / problem solving Bachelor's degree with
at least 8+ years of relevant professional experience OR a Ph.D. in with 2-7 years of relevant work experience Strong Pl/SQL and E- business suite experience as developer NOT Admin Strong SAS and Unix experience Strong Pl/SQL and E- business suite experience as developer NOT Admin Strong SAS and Unix experience Strong Pl/SQL and E- business suite experience with Ticketing Technical background in PL/SQL, SAS, and Oracle Warehouse Principles Working knowledge in Citrix, Network, LAN/WAN,
Cloud, VPN, Knowledge of using the IDEs Good Analytical and problem solving skills and Experience of supporting multi-tier systems Ability to multi task, manage and handle multiple service projects simultaneously and to the schedule Service Improvement Techniques Understand & ensures compliance with IT guidelines for system development, implementation and system
security Experience in application operations and support including knowledge and experience of Incident, Problem, and Change Management Knowledge of Consumer Healthcare and ITIL Support if required and pro-actively monitor operations Develops and
improves business processes within the technology and business organizations and understands client requirements, specifying and analyzing these to a sufficient level of detail to ensure clarity of definition Translates complex business requirements, specifying and analyzing these to a sufficient level of detail to ensure clarity of definition Translates complex business requirements, specifying and analyzing these to a sufficient level of detail to ensure clarity of definition Translates complex business requirements into technical
solution recommendations to meet requirements based on understanding of how configured solutions will impact the business and stakeholders Create, monitor, and improve data flows as well as newly created data flows Work with a senior developers and
senior staff to advance projects to completion. Support quality control, deployment, data migration and data conversion Support database environments throughout the organization including test, pre-production Bachelor's degree in related field or equivalent in education and work experience Experience with Microsoft SQL Server is necessary and
certification is highly desirable Proficiency in the SQL language and familiarity with programming languages Expert understanding of relational database architecture and design Expert on data management, with practical experiences with data
extraction, transformation and loading Strong interpersonal and teamwork skills, ability to interact effectively and accurately with all organizational levels Excellent organizational skills, ability to multi-task, prioritize own responsibilities; work independently and completely projects in a timely manner Use TFS & Salesforce as primary methods to track enhancements/bugs Create new
logic and features using TSQL, SSIS, & SSRS Correct and patch bugs in existing code/processes using TSQL, SSIS, & SSRS Maintain referential integrity by using the available options such as constraints Develop and solve
complex engineering problems Expert SQL Server knowledge of TSQL and OLTP topics such as Normalization, data types, query tuning, indexing, constraints, and query plan Ability to be effective in a rapidly growing organization Possess excellent listening skills in
partnering with clients staff and in developing and maintaining long-term supportive relationships Ability to organizational and coordination skills Experience with SQL coding and application performance tuning skills Experience with C# and Transact SQL Knowledge of
 SSRS, AngularJS, MVC, and Entity Framework Knowledge of System Development Life Cycle (SDLC) Methodology US Citizenship Required** Migration of MSSOL DB from Universe DB Data migration (Migration strategy, Large sets of data, hierarchical to Relational) Working closely with the DB Architect in defining and sizing the DB infrastructure (performance, resilience
housekeeping etc.) Design, build and test SQL scripts, functions and stored procedures to support application needs Conduct Index and Performance Analysis to ensure products provide optimal performance Analysis to ensure performance Analysis to
Demonstrates expert knowledge of database design Demonstrates expert knowledge of T-SQL programming Demonstrates expert knowledge of performance tuning Works effectively with Internal & External Clients Requirements Analysis & Management Software Testing (Unit, System, Integration, Functional, Performance) Planning and Organization Participate in recruiting
process to hire 'A' players Awareness Of Emerging Technologies 60% SQL + 40% C#/. Net Intermediate level proficiency in SQL (2012 preferable) Intermediate level proficiency in C# Ensures production reports are accurate and delivered in a timely manner Provides timely response and resolution of emergency production questions, issues, and defects Adheres to production
support and implementation processes Ensures production environment stability Provides analytical services for business data needs and makes recommendations for viable solutions Addresses data integrity issues as they arise Troubleshoots data issues, validates result sets, recommends and implements processes improvements Effectively communicates with internal and
external customers with management oversight as necessary, to elicit, capture, develop, and implement customer requirements Documents production process flows Works closely with Team Leads and Management to meet department production process flows Works closely with Team Leads and Management to meet department production process flows Works closely with Team Leads and Management to meet department production process flows Works closely with Team Leads and Management to meet department production process flows Works closely with Team Leads and Management to meet department production process flows Works closely with Team Leads and Management to meet department production process flows Works closely with Team Leads and Management to meet department production process flows Works closely with Team Leads and Management to meet department production process flows Works closely with Team Leads and Management to meet department production process flows Works closely with Team Leads and Management to meet department production process flows Works closely with Team Leads and Management to meet department production process flows Works closely with Team Leads and Management to meet department production process flows Works closely with Team Leads and Management to meet department production process flows Works and Management to meet department production process flows with the meet department process flows with the meet department process flows with the meet department process flow
Conducting ongoing requirement analysis for data needs for department/account managers and customers Conducting project based data analysis and ad-hoc reporting Analyze and evaluate requests for reports and develop procedures to extract tools Proficient in report
documentation and auditing procedures TO APPLY Code, test, and analyze applications Strong knowledge of one or more
development language(s) and tool(s) Must be able to determine and document moderately complex T-SQL queries, views, and stored procedures in a multi-database environment is required Develop SQL code to support database and Change Data Capture Automate system
processes using Powershell Manage ETL processes Manage multiple Microsoft SQL database instances; this includes system resource monitoring, backup activities, and tuning Serve as a technical resource for project managers, programmers, and analysts Use knowledge and experience of industry best practices to refine operational procedures and processes to ensure
reliability, efficiency, and quality Participate in design reviews, and work with team of developers to troubleshoot and redesign applications as necessary Evaluate the benefits and drawbacks of new features and versions of Microsoft SQL Collaborate with network, hardware and system operations teams to resolve problems with database system Stored procedures SFTP
integrations with external vendors Update older visual studio projects to recent version Visual Studio at least 2008, 2010, 2012 - if possible VS 2016 Visual Basic including .net and .aspx functionality Coed is connecting to Microsoft Online Services (MSOL) End user requirements gathering Review existing data
layer and optimize Write stored procs Optimize existing queries Provide oversight of code within this solution There will also be an opportunity for this individual to be involved with building out their Data Analytics platform They are currently on 2014 Bachelor degree in Computer Science or equivalent experience 5+ year experience as SQL developer SQL programming skills
including SQL scripts, stored procedures, functions and triggers Experience of customizing programs in Visual Basic Proficient in the use of Microsoft Excel (Charts, Pivot Tables, etc.) Familiarity with the FTP process Knowledge of AS400/RPG systems would be a plus Capable of reasoning and thinking through problems and developing desired solutions, independently or with
others as required Experience of the full software development life cycle including design, testing, deployment, documentation and support activities Responsible for performing SQL development and SSIS /SSAS/SSRS development Work closely with SharePoint Developers, Project
managers and Business analysts to deliver the highest quality products in a timely and cost-effective manner Creating SQL database objects (Stored procedures, trigger, integrated mode from a variety of data sources including SharePoint List and relational databases Working with
SQL Server Administration and Disaster recovery architecture Develop reporting, business intelligence (BI) solutions using SSRS/SSIS/SSAS and ETL technologies Review requirements and propose different solutions with pros and cons Developing Ad-Hoc reporting models in SSRS Creating and analyzing complex queries, store procedures, tables, views, triggers, functions,
SQL Jobs Working directly with the business teams to understand their needs, identify and resolve data issues Writing technical design and supporting documentation Experience with full life-cycle application development Strong experience with development of SQL Integration
Services packages and SQL Reporting Services (SSIS and SSRS) Experience in the design, development and maintenance of appropriately-scaled, effective solutions to support data quality, migration and reconciliation activity in Microsoft SQL Server T-SQL, Integration Services and related tools Very strong T-SQL skills and strong knowledge of ETL techniques is desirable
Good understanding of Database Design, Integrity and optimization process In depth experience of performance-tuning SQL Server databases code and environments, and SQL profiling Strong background in data management and data manipulation, code management and version control (TFS) Produce some SQL or PL/SQL developments (Oracle) using BNP
standards and guidelines Handle bug-fixes and implement possible system redesigns Work with Network team for accessibility and connectivity (firewalls / domain) if required Assist software releases for Quality Assurance, staging, and production activities Assist on BAU set-up (training future users or production support team; creating procedures, etc...) Support end users with
technical issues At least 3 years' experience working in SQL development Ability to analyze data sets and perform consistency and quality controls Ability to work autonomously and as part of a team Excellent English oral and written skills. Working knowledge of French is a plus Understanding of banking products and risk data is a plus Certified SQL developer Bachelor's or
Master's degree in Computer Science, Computer Science, Computer Engineering, Information Systems, Business or a related field 6 years IT Industry experience 2-3yrs experience with SQL, PL/SQL stored procedures, C, Unix Shell Scripting Work directly with
investment professionals and business partners on their data and systems needs Support configurable applications (screen design, calculation definitions, etc.) Build and deploy reports using Microsoft SQL Server Reporting Services (SSRS) Investigate new data sources and coordinate their integration SQL Server (3+ years minimum). Net technologies Previous experience
supporting technical needs at an investment manager or similar financial firm highly desired Bachelor's degree with a minimum 3-5 years relevant experience (Microsoft SQL Server Reporting Services, Crystal Reports, etc.) Ability to function
independently and meet tight deadlines Ability to understand business concepts and interpret business partner requests Ability to communicate clearly and effectively within various levels of the organization SECRET clearance (must be current) Bachelor's Degree in Computer Science, Electronics Engineering, or another Engineering in a Technical discipline OR 3 additional years
of experience in lieu of a degree Experience experience experience developing, developing, and testing software, compilers, and network interface requirements experience developing tools and interfaces experience designing, developing, and testing software, compilers, and network
distribution software applications at an operating systems level Demonstrate and show competence in setting operational specifications and formulating and analyzing software requirements Strong familiarity or proficiency with the following T-SQL, SSIS, SSRS, HTML, XML, C# (Visual C#), Java Windows Servers 2008 (various) and 2014 MS SQL Servers 2008 (various) and 2012
Familiarity with the following is preferred Army processes, particularly those pertaining to the Software Development Lifecycle Department of Defense (DOD) Defense and RESPONSIBILITIES Candidate must have Senior SQL Server
Development skills-ability to write SQL Queries, create, tune, debug SQL Code as well as create Tables, Stored Procedures, Views Candidates must have experience designing, maintaining, and migrating ETL packages with SSIS. Huge plus if they
have experience migrating SQL 2008R2 to 2014 Database and report development using SQL Server 2008/2012 Business Intelligence Development tools Troubleshoot data issues, validate result sets, recommend and implement process improvements Development tools Troubleshoot data issues, validate result sets, recommend and implement process improvements Development tools Troubleshoot data issues, validate result sets, recommend and implement process improvements Development tools Troubleshoot data issues, validate result sets, recommend and implement process improvements Development tools Troubleshoot data issues, validate result sets, recommend and implement process improvements Development tools Troubleshoot data issues, validate result sets, recommend and implement process improvements Development tools Troubleshoot data issues, validate result sets, recommend and implement process improvements Development tools Troubleshoot data issues, validate result sets, recommend and implement process improvements Development tools Troubleshoot data issues, validate result sets, recommend and implement process improvements Development tools Troubleshoot data issues, validate result sets, recommend and implement process improvements Development tools are provided as a set of the process improvement to the process
based on business needs Work with other teams to understand business rules and interpret data Maintain an ongoing knowledge of both the technical data model and the business strategic needs Take care of different environment like production, QA and development 3-4 years of IT experience with core expertise in query design, performance tuning, reporting and data analysis
Knowledge in understanding the execution plan and do necessary changes for better performance Proficient in Transact SQL Proficient in MS SQL Server architecture and query tuning Experience in developing medium to complex report using the Microsoft SSRS Experience working with data warehousing concepts, terminology and architecture Strong analytical, multi-tasking
and problem solving skills Strong communication Skills and should be a team player Work independently with little supervision 4 years of experience in the following: COBOL; SQL query and update; Tuxedo, Corticon, Business Rules Engine would be a plus Strong technical coding skills with a proven track record of adherence to process Demonstrated documentation
skills Capital markets experience – basic understanding of capital markets Must have general understanding of data attributes for fixed income, equity and derivative instruments Significant experience using SQL across normalized data models Ability to work with Data Architect to create and understanding of capital markets Must have general understanding of data models Ability to work with Data Architect to create and understand data models Ability to Interface and interact collaboratively with business
users, project managers, development teams, testers and technical leads Excellent written and verbal communicate and cope with change and pressure Ability to effective manage multiple projects/tasks of varying complexities, meet deadlines and adapt and cope with change and pressure Ability to effective manage multiple projects/tasks of varying complexities, meet deadlines and adapt and cope with change and pressure Ability to effective manage multiple projects/tasks of varying complexities, meet deadlines and adapt and cope with change and pressure Ability to effective manage multiple projects/tasks of varying complexities, meet deadlines and adapt and cope with change and pressure Ability to effective manage multiple projects/tasks of varying complexities, meet deadlines and cope with change and pressure Ability to effective manage multiple projects/tasks of varying complexities, meet deadlines and cope with change and pressure Ability to effective manage multiple projects/tasks of varying complexities, meet deadlines and cope with change and pressure Ability to effective manage multiple projects/tasks of varying complexities, meet deadlines and cope with change and
the business Ability to identify and implement process changes Organized and applies quality standards to all tasks undertaken and ensuring that nothing is overlooked Establishes relationships and involving other areas that can contribute to delivering
objectives Thinks creatively and looks for opportunities to innovate and improve Evaluates key issues in terms on their impact on the business Makes decisions quickly and confidently based on experience and sound analysis 4 years' experience in COBOL; SQL query and update; Tuxedo, Corticon, Corticon, Business Rules Engine would be a plus Good verbal and written
communication Strong technical coding skills with a proven track record of adherence to process Familiarity with SDLC - Software Development Life Cycle Familiarity with CMMI or Agile processes Bachelor's Degree preferred Create automated reports and other
tools as necessary Use SQL and PL/SQL to create and modify reporting tables in an Oracle data warehouse environment Prepare operations and Business Intelligence reports that are easily interpreted Test and validate all reporting and data management solutions prior to their implementation into a production environment Assist in the development of internal applications as
necessary Respond to service center reporting needs according to the customer service guidelines of Data Analytics Design, develop, and support database applications Collaborate effectiveness of current database technology solutions and offer innovative ideas
Manage technical implementation requirements and deadlines across multiple projects Evaluate operation of production database applications and perform appropriate troubleshooting as necessary Create and maintain technical design documents and diagrams SQL Server development experience including SQL 2012 experience preferred Ability to design and implement
database projects with minimal oversight 3 to 6 years database development experience with at least 3 years using SQL Server 2008 or above Knowledge of Database Administration in a production environment Ability to collaborate effectively in a team environment Ability to work under the pressure of multiple projects and deadlines SQL CLR/. Net development Good
understanding of Web-based technologies and development Overall understanding of Service Oriented Architecture MCSA/MCSE certification is desirable Minimum 10+ work experience with index design and T-SQL performance tuning techniques Experience with advanced query
design, stored procedures, views and functions Experienced designing and implementing large-scale database solutions that are reliable, scalable, and perform at high levels Working knowledge of security and privacy issues SQL 2008/2014 Familiarity with RDBMS principles, database design and normalization Demonstrates initiative and works independently with minimal
supervision Exposure to Database Administration i.e. Replication, Backup\Restore strategies, Clustering, Log-shipping is a differentiator Experience working with PPDM (Professional Petroleum Data Management) model is a plus Experience working with PPDM (Professional Petroleum Data Management) model is a plus Experience working with PPDM (Professional Petroleum Data Management) model is a plus Experience working with PPDM (Professional Petroleum Data Management) model is a plus Experience working with PPDM (Professional Petroleum Data Management) model is a plus Experience working with PPDM (Professional Petroleum Data Management) model is a plus Experience working with PPDM (Professional Petroleum Data Management) model is a plus Experience working with PPDM (Professional Petroleum Data Management) model is a plus Experience working with PPDM (Professional Petroleum Data Management) model is a plus Experience working with PPDM (Professional Petroleum Data Management) model is a plus Experience working with PPDM (Professional Petroleum Data Management) model is a plus Experience working with PPDM (Professional Petroleum Data Management) model is a plus Experience working with PPDM (Professional Petroleum Data Management) model is a plus Experience working with PPDM (Professional Petroleum Data Management) model is a plus Experience working with PPDM (Professional Petroleum Data Management) model is a plus Experience working with PPDM (Professional Petroleum Data Management) model is a plus Experience working with PPDM (Professional Petroleum Data Management) model is a plus Experience working with PPDM (Professional Petroleum Data Management) model is a plus Experience working with PPDM (Professional Petroleum Data Management) model is a plus Experience working with PPDM (Professional Petroleum Data Management) model is a plus Experience working with PPDM (Professional Petroleum Data Management) model is a plus Experience with PPDM (Professional Petroleum Data Management) model is a plus Experience with PPDM (Pr
operation Strong quantitative, analytical, problem solving, organizational, communication and interpersonal skills are required Attention to detail and maintaining high quality standards is a must Effectively communicates using
written, oral, non-verbal, and active listening skills. Has the ability to clearly present an idea or concept so others understand, lets others speak, and engages productively in difficult conversations while upholding our ethical values SSIS experience- to extract data from sources to generate reports Advance knowledge
```

of Microsoft T-SQL Proficient knowledge of Microsoft Information Services (SSIS) Proficient knowledge of Microsoft Reporting Services (SSRS) Basic knowledge (SSRS) Basic knowledge

```
application Maintains database dictionaries, monitors overall database standards and procedures, and integrates systems through database design Primary off hours support for RCM processes (Monitoring / Troubleshooting skills, able to debug production code
with limited guidance Self-starter, able to work with limited supervision and see tasks through to completion Willingly shares relevant technical and/or industry knowledge and expertise to other resources Excellent decision-making, problem-solving, team, and time management skills 3-5 years experience with MS SQL (Some of which in SQL Server 2012 & 2014) 2 years SSIS
experience (SQL Server 2012) We are seeking an SQL developer who is experienced in RDBMS architecture and ETL development We are migrating data and UI from FileMaker to a SQL database and in-house C# Main Responsibilities Finalize RDBMS design and migrate File Maker data MSSQL Stored procedure development and optimization SSIS development and
optimization Conversion and optimization of DTS packages to SSIS Creation and optimization of SSIS packages based on functional requirements Creation and optimization of MSSQL stored procedures Verify database and data integrity Participate in SCRUM
meetings with the IT team to discuss progress and issues to be resolved, and report progress on a weekly basis 4+ years of experience with SQL query development, stored procedures, and complex views and joins in MSSQL 1+ years of experience with
AZURE SQL databases and data factories 2 Experience with Microsoft on premise VS/TFS or online VSTS High level of English proficiency experience with UC4 (Atomic) job creation and scheduling Experience with DTS packages in MSSQL Highly analytical and process oriented Ability to identify and resolve technical issues Familiarity with C# or VB.NET Working experience with
Git, Mercurial, TFS or similar SCM tooling Data Warehousing strategies, preferably using the Kimball methodologies Strong software development practices and discipline, including distributed source code control management and continuous integration in database centric environments Database performance analysis and improvements implementation Highly motivated to
succeed in a performance driven environment Does not wait for others to resolve ambiguity or provide clarity, demonstrates the tenacity required to resolve situations and time management skills Working experience with JIRA and Confluence Prior experience
working together with a team of other developers Coordinate and work with other technical staff to develop relational SQL databases and other storage solutions Design and deploy tables, views, and Enterprise Data Architect to provide data consistency and
direction across all areas Provide high quality application to data layer connectivity Provide Business Intelligence Delivery for data entry, retrieval, change, and delete issues, and work to ensure a high level of data availability while working to meet
business requirements for project completion Ensure Ethical usage of all data Working with Agile Development Methodology and Scrum Framework Participate as a member of a large team of development experience Agile Development Experience,
ideally with SCRUM or KANBAN frameworks Experience with database tools, including SSRS, SSIS, SSAS, Visual Studio and Team Foundation Server Familiarity with in-house data-intensive applications, cubes, and data warehouses, etc Experience with ESB and other Gateway tools Experience with data modeling Develop ETL orchestrations, testing and validations Ensure
accuracy & integrity of data applications through analysis, coding, writing clear documentation & problem resolution Ensure that integration projects with internal and external customers Work with business colleagues and business analysts
to design and create reports Help manage and consolidate portfolio of reports Skills Required Minimum of 3 years' experience and/or training Proficiency in understanding business requirements Able to project professional image for the company in person and over the telephone Develop all production activities relating to quarterly analyses of client claims extracts designed to
identify and characterize episodes of care based on predetermined specifications Develop and deploy reporting solutions to provide clients with analytic results to support their implementation of bundled payment programs Actively participate in testing efforts to ensure that Optum capabilities continue to address the evolving requirements of our clients and stakeholders Deploy
revised software systems in existing data processing work streams to maintain and update Optum capabilities around bundled payment analytics and reporting Work with related development, production and quality assurance efforts to ensure that the needs of our clients are met
on a timely basis Work with clients and other stakeholders to provide second-level support in response to queries that they receive regarding the output of our analytic methods and reporting Interact with other departments to ensure a high level of client satisfaction through successful execution of projects Perform other duties and responsibilities, as assigned A Bachelor's degree
in Computer Science, Statistics, Economics, Mathematics or another, related discipline or equivalent work experience 5+ years of demonstrated proficiency in data modeling and process design 3+ years of demonstrated proficiency in SQL Server Reporting Services or similar
platforms 4+ years of experience in working with UB04 and HFCA 1500 claims content and an understanding of how this information is used to determine reimbursement in Commercial, Medicare and Medicaid settings Strong organizational skills and a demonstrated ability to work effectively as a member of highly functioning team of experience in leading a
team of IT professionals Excellent written and verbal interpersonal communication skills Excellent time and resource management skills Work with Business stakeholders to understand projects equirements and collaborate with integration team to arrive at design for the projects Ability to communicate with our clients regarding all aspects of data transfer projects with a frequent
velocity Map project these into sprints and capture details in JIRA/Confluence Take a disciplined approach to estimation and planning of each project A 'building quality in' mindset is critical. This involves ensuring good design, robust implementation and partnering with the QA teams to ensure test coverage and execution is comprehensive Keep apprised of emerging technologies
to validate that the technology and architecture is appropriate for business solution needs Keep product documentation current and in addition to capturing changes from projects, enhance and grow the documentation with product knowledge spread across team members Core development is done with the latest Microsoft tools and supported best practices 4+ years of hands-on
experience with SQL server 3+ years of hands on data integration domain experience - SQL, EDI, ETL (Data Warehouse exp a plus) Very high levels of both verbal and written communication skills are required for this opportunity Experience in Electronic Data Interchange (EDI) other forms of transmitting and routing EDI Ability to develop and interpret complex queries and
understand database design as well as performance techniques related to data growth and scalability Experience working with and developing workflows with enterprise software vendors Experience creating workflows which clearly explain business/software functions Knowledge of logical and physical database design Contribute to a culture of eliminating issues through root
cause analysis as against addressing symptoms Collaborate with operations, product management, quality assurance and business teams. Collaboration with senior management to solve tough challenges Work well in a small group/start-up environment In depth experience in MS SQL Server 2012 and writing Stored Procedures using T-SQL Expertise in ETL Programming using
Microsoft SQL Server Integration Services(SSIS) Experience in writing TSQLT unit test scripts will be a plus Experience with TOAD Data Modeling Experience in Report Development using Microsoft SQL Server Reporting Services (SSRS)
Experience with Blackbaud CRM and Blackbaud DW is a plus Ability to develop from a Technical Specification and good documentation skills Development/Enhancement of the LRI Data Management Layer and controls of Strategic Supply data Support the
SDLC Knowledge/practical experience of Agile methods Knowledge/practical experience of continuous integration Working experience in Business Intelligence application in financial Industry is preferred Develops ad hoc lists utilizing SQL queries Interfaces with internal
customers/requestors Regularly works under deadlines and may be subject to extreme workloads SQL Server (Latest Versions) Stored Procedures / T-SQL OLTP / OLAP/ Cubes SSMS / SQL Server Integration Services Familiar with the technical aspects of
data warehousing, Business Intelligence systems Bank or similar financial experience a plus SQL development with experience working In Oracle 11, Oracle 12 Oracle PL/SLQ Designing, developing, implementing and tuning complex Med D enterprise level reporting database systems for Med D reporting purposes
Responding to user requests for new tables, procedures, views and reports that support the reconciliation of Medicare Part D plans, utilizing the internal enrollment systems Providing support for production systems, including rotational on-call support, when required In this role, you will design, code, test, debug, document, deploy, and support solutions that ultimately improve
health outcome, quality of care, and patient safety. This includes the timely handling of all CMS/Compliance and SLA reporting requirements Academic Qualifications – BE/BTech/ME/MTech Any previous experience in developing applications on HANA would be added advantage Strong Customer focus Excellent communication skills, able to articulate complex ideas in a
structured way Flexibility and openness for new challenges and tasks Ability to work with virtual and distributed teams Quick learner, open and ready to be cross skilled to any technologies as per the need of the business 4-6 years in the area of database programming Lead complex database development projects from requirement gathering through development, testing,
communication and end user production support Manage daily sales feeds and compilation/processing Create, maintain and troubleshoot daily file transfer processes Develop multiple high-exposure project simultaneously, while ensuring quality products and initiate releases in required timelines Create, maintain and troubleshoot audits on table performance, file loads, file
transfers and data accuracy Maintain daily audits/emails/alerts to monitor all incoming feeds, files and updates Create, develop and maintain SQL processes for channel performance data warehousing Develop new processes while streamlining/improving/maintaining existing ones Implement data feeds using a multitude of sources and platforms, for both internal and external
clients Resolve any issues encountered for full product support along with prompt accurate communication 15+ years SQL development experience 6+ years managerial experience 6+ years mana
database and programs to manage data analysis effort Demonstrated ability to work independently and within a team in a fast-paced environment with changing priorities and time constraints Strong interpersonal skills, analytical skills, analytical skills, problem solving skills and ability to multi-task Experience in normalizing data to ensure it is homogeneous and consistently formatted to enable
sorting, query and analysis Experience with Reporting Services and Database Administration Working knowledge of building self-serve analytic tools for business users a plus Working knowledge of Web Applications and documentation skills a must
Design, develop & maintain efficient, repeatable and appropriately-scaled solutions in Microsoft SQL Server T-SQL, Integration activity Define & document the requirements (including non-technical ones) of data migration solutions. Ensure, through close collaboration with the business and project
team, that requirements are comprehensive so that software is fit for purpose when it goes live Communicate with third party suppliers to understand their software APIs and integrate them with your solutions to load and extract data Identify and resolve performance bottlenecks in internal and third party databases in Oracle and SQL Server Manage MS SQL Server database
environments that support data migration and backups and recoveries in test environments Provide support for software solutions, including analysis, tracking and resolution. Take pro-active ownership of support tasks and see them through to completion Report progress on development at daily stand-ups and escalate issues or slippage in a timely fashion, identifying remedial
action to keep the project on track Share & document technical and domain knowledge to improve support and eliminate single points of failure Create and suppliers as required Demonstrate a logical and structured approach to time management
and task prioritisation to deliver work within project timelines and budgets. Be able to organise own time, schedule tasks for completion and deliver work to that schedule Accurately estimate the time and materials required to complete a piece of development work Write ad-hoc T-SQL queries Develop and maintain database feeds that import and export a variety of file formats
using SSIS Create and support database reports using SSRS Peer review the work of other SQL developers to ensure proper and efficient execution and adherence to business and technical requirements Codes, tests, and debugs new software or
makes enhancements to existing software Designs and writes programs according to functional and non-functional requirements Develops technical documentation Resolves in a timely manner problems that arise with technical staff to learn and understand
software problems Provides general system users and management with system analysis and feedback Influences system design by identifying and recommending design and requirements needs for software programs Analyzes and resolves
computer related problems by coordinating with in-house personnel to diagnose and fix operational T-SQL skills including the ability to create stored procedures, advanced queries, functions and triggers Strong Data Modelling experience
ideally with; Tabular, Kimball, and DAX A background in SSIS with an ability to design and develop ETL packages Evidence of progression and consistency in career to date Passionate about providing unparalleled levels of customer service Knowledge of TSQL and OLTP topics such as Normalization, data types, query tuning, indexing, constraints, and query plan Ability to break
down and solve complex engineering problems Ability to work independently and as a contributing team member Ability to write technical documents Solid understanding of data warehouse design concepts, e.g. snow-flake, slowly-changing dimensions
Awareness of latest SQL Server features, e.g. column-stores, in-memory storage, json support Ability to deliver clean, documented and testable code SSAS, SSRS, SSIS .net/C# Creating, maintaining, and optimizing tables, stored procedures, functions, and views Providing peer review on future analytics scripts Advising leadership on
future data analysis techniques and procedures Gathering requirements, developing and documenting future projects Experience with Microsoft SQL Server Experien
encryption methods Experience scripting with windows powershell Understanding of data warehousing concepts Ability to multi-task effectively A
applications, and technology platforms Bachelors Degree required Two to four years experience analyzing data in a professional environment using research and database software Minimum two years of experience with MS SQL Ability to work on all phases of development assignments understanding project lifecycles with mission critical applications Ability to communicate with
technical and non-technical users Process orientation and mapping skills Proficiency in a variety of software tools and languages Knowledge of production support, project management methodology and tools Exceptional analytical skills to identify and resolve technical issues/problems Knowledge and understanding of HR, Benefits, and Payroll functions and high-level processes
Ability to collaborate and build effective relationships internally and externally with all levels of stakeholders Effectively manage multiple tasks and timelines Proven decision making skills Strong analytical, troubleshooting and proficiency with Oracle
SQL and other standard database query tools Experience in data analysis, data mapping techniques Work experience with Business Intelligence (data architecture, entity relationship planning, dimensional modeling, ETL, OLAP, analytical reporting) preferred Solid background in Database development (Oracle / SQL Server) Experience in data analysis, data mapping technology or operations support
will be an added plus Experience in any workflow system like Pega is a plus Champion company standards and best practices. Work to continuously improve software delivery processes and practices Build partnerships across the application, business and infrastructure teams Develop programming specifications. Design, code and unit test application code using Software
Development Life Cycle (SDLC) best practices Complete estimates and work plans independently as appropriate for design, development, implementation and rollout tasks Create technical system documentation and ensure that this documentation and rollout tasks Create technical system documentation and rollout tasks Create technical system documentation and ensure that this documentation and ensure that this documentation and rollout tasks Create technical system documentation and ensure that this documentation and rollout tasks Create technical system documentation and ensure that this documentation and ensure that the appropriate teams to ensure the appropriate 
managed appropriately and that completed assignments are of the highest quality Support and maintain applications utilizing required tools and technologies. Provide off-hours support (24 x 7) as required Assist other personnel on assignments
including mentoring or providing on-the-job training to more junior associates. Mentor team members in softwaredevelopment principles, patterns, processes and practices May direct the day-to-day work activities of other team members 7 or more years experience with Project
planning Proven communication and presentation skills to effectively communicate information to customers and to all levels within the organization Ability to interact well in a team environment Bachelor's degree in IS or related equivalent work experience in an Information Systems position 5 - 7 years experience in systems analysis, design or programming and the associated
development methodologies with large size or highly complexprojects Prior experience with project planning with large size or highly complex projects 8+ procedures and jobs 5+ years data integration and ETL experience with SQL Server Integration 5+ Services (SSIS) or other industry leading tools including ability to 5+ configure SQL Server agent years of experience in
designing and 5+ developing ETL processes including naming conventions, connection to 5+ variety of systems and processing of large volume of data elements across multiple 5+ systems including creating templates and best practices to maintain 5+ the mapping information 4+ years of experience extracting data from
Salesforce.com database 4+ objects using API calls via SSIS, DataLoader, and other ETL tools 4+ familiarity with SQL (Salesforce SQL) Understanding of MDM, Data warehouse / Data mart Experience with SQL Server in a VMWARE or AWS environment Experience moving data across different types of databases Excellent performance tuning and TSQL skills SQL Automation
experience Good with Data Warehousing Concepts Strong familiarity with data warehousing and mining concepts Excellent verbal and written communication as well as interpersonal skills Strong research and analytical skills Proficiency in SQL, Transact SQL, SAS, writing stored procedures, functions and statements for data transformation and manipulation Risk management,
Compliance and/or Audit experience Candidate must work directly with client THAT DOESN'T PROVIDE SPONSORSHIP** Systems Analysis Technical Design Participate in detailed onboarding process including both technical and business overviews Experience working with SSIS packages. Potential candidate should be able to create SSIS package Minimum 2 years MS SQL
Server Minimum 2 years SSIS Healthcare/Insurance experience preferred SQL Server versions 2008r2 - 2014 Visual Studio version 2014 for SSIS development Knowledge of Informatica would be a plus but not necessary Bachelor's Degree in Information
Systems, Computer Science and/or Engineering required; or equivalent combination of education and experience Experience encintaining and/or developing software for Warehouse Management Systems (WMS); Yard Management Systems (YMS); SSIS experience, preferably in a SQL Server / .NET / Microsoft environment; SSRS / SSIS experience experience, preferably in a SQL Server / .NET / Microsoft environment; SSRS / SSIS experience experience experience experience experience experience experience experience, preferably in a SQL Server / .NET / Microsoft environment; SSRS / SSIS experience experience
distribution systems and/or supply chain / logistics Agile / Scrum environment experience Familiarity with quality assurance testing principles Offshore experience preferred A background in QA is preferred Documentation of applications Work independently as well as in a team environment, including remote US and overseas interactions Handle multiple projects simultaneously
within established time constraints Perform under strong demands in a fast-paced environment Display empathy, understanding and patience with employees and external customers Respond professionally in situations with difficult employees and external customer issues or inquiries SQL Development - Writing Transact SQL Meeting with Business or Team on Requirements
Experience writing Transact SQL in SQL Server 2008 R2 or later Develops SQL stored procedures, functions, views, tables and other database objects as defined by business partner requirements and Corporate Analytics management to support overall corporate Analytics management to support overall corporate Analytics as defined by business partner requirements and Corporate Analytics management to support overall corporate Analytics and the support over the support 
environment Fulfill ad-hoc data requests as needed Create and maintain documentation related to applications, data sources, and ETL movement within Corporate Analytics data environment Provides mentoring to less experienced team members Reviews and identifies opportunities to optimize SQL queries for peak performance Enforce, follow and improve Application Change
Management procedures Design, develop, manage, and support all existing job processes to ensure service levels are met Perform regular monitoring, analysis and tuning of databases development Advanced analytical skills in the realm of modeling, data mining,
data manipulation and visualization Bachelor's degree in Computer Science or related field and/or equivalent experience Minimum of 7 years' experience Minimum of 7 years' experience in successively progressive positions in database modeling, design, and complex report
development Experience in data integration using ETL tools such as SSIS, IBM DataStage or Informatica Minimum of 5 years' experience with Business Intelligence and related query tools Experience with SAS software products and solutions a plus Ability to design and develop software solutions using the Visual Studio development environment Demonstrate an advanced
proficiency in MS SQL and relate technologies Mentor and train staff members on the MS SQL platform The candidate must also demonstrate the ability to stay abreast with the assistance of more senior team members as appropriate for design, development, implementation and rollout tasks
 Support and maintain applications utilizing required tools and technologies Help maintain, enhance and/or rewrite the existing exports, and reports Create and maintain documentation for all projects 4 - 6 years experience in systems analysis, design or programming and the associated development methodologies with medium size or medium level complexity projects Experience
in SQL Server 2012/2008/2005, SSIS 4+ years of experience programming in T-SQL and programming in T-SQL and programming in T-SQL and programming in terations, visualizations, SQL queries, functions Experience or experience creating reports and data visualizations, SQL queries, SQL queries, functions Experience creating reports and data visualizations, SQL queries, SQL queries, functions Experience in developing and updating SSIS and DTS packages Requirements gathering, iterations, visualization best-practices, design
deployment, and on-going enhancements Development and support of new and existing HEDIS measures Development and support of Medicare Risk Adjustment model Development and support of Exchange Risk Adjustment model Development and support of Exchange Risk Adjustment model Development and support of Medicare Risk Adjustment model Development and support of Exchange Risk Adjustment model Risk Adjustme
experience 2) Experience with SSRS 3) Must have Property & Casualty industry insurance experience in SQL Server Good experience in SSIS and SSRS Must have experience in SQL Server 2005 and 2008 Experience in ETL and Visual Basic Hands on experience in data integrity and
risk management Experience in Onshore-Offshore model Demonstrated experience in MS SQL Demonstrated experience in SSIS and SSRS 1) 4+ years of T-SQL Development 3) Property & Casualty industry experience - either home or auto 2 Source Homeowners Claims Process Written and Earned Premium Claims paid and Claims reserved Combined ratio and loss ratio
Policy vs Claim Retention rate MUST be proficient with Microsoft Excel RDBMS and SQL 2 years software development experience and maintain Sun's Enterprise Business Intelligence architecture, including standards and protocols for design,
environments, implementation, ETL, reporting and analytics, and integrations Communicate with end-users and IT team members to define data repositories) to support organizational reporting, analytics and integrations Design, implement and maintain
ETL processes to acquire, validate and transform information from source systems into data stores, reports, dashboards and tallet and transform information from source and reliability metrics for all data stores, reports, dashboards and transform information from source systems into data stores, reports, dashboards and transform information from source systems into data stores, reports, dashboards and transform information from source systems into data stores, reports, dashboards and transform information from source systems into data stores, reports, dashboards and transform information from source systems into data stores, reports, dashboards and transform information from source systems into data stores, reports, dashboards and transform information from source systems into data stores, reports, dashboards and transform information from source systems into data stores.
including data dictionaries, data flows and database schemas necessary to document database environments and ensure maintainability Design, implement, monitor and maintain BI environments and database servers to meet usage and performance demands *Experience with M-Files is highly desirable.*** 5+ years of Microsoft BI Technology (SSRS, SSAS, and SSIS) 5+ years
developing with Microsoft SQL Server and T-SQL An equivalent combination of education and experience may be substituted In depth understanding of Data Warehousing concepts, methodology and data architecture Familiarity with Agile Development methodology Organize and prioritize individual workload in order to meet required deadlines Communicate effectively with team
members, team leads, and management Work as a member of a team, accept ownership of work and actively contribute in team discussions Experience in the Insurance industry is a plus * FOR IMMEDIATE CONSIDERATION, PLEASE EMAIL RESUMES DIRECTLY TO
ANAJ305@KELLYSERVICES.COM *** 2-3 years SQL experience (Basic SQL querying, SSIS & SAS a plus) Formal documentation experience (mortgage and/or institutional experience a plus) Minimum 2 years experience with SQL Server Management Studio, SAS or similar database query/data mining tool
Proficiency with MS Office suite with an emphasis on Excel to perform data analytics, pivot tables, lookups and external data source connections Bachelor's degree preferably in a business, financial or computer science discipline 5+ Years of SQL Development 2+ Years of SQL Server 2012+ administration Experience with SQL Server Reporting Services (SSRS) 2012+, Power BI,
or QlikView Comprehension of relational and dimensional modeling Familiarity with performance tuning techniques such as indexing and analyzing query execution plans Experience with agile development (Scrum, Kanban) Ability to take ownership and facilitate consensus among a diverse group of stakeholders Must be willing to collaborate and problem solve in an open team
environment SQL Server Analysis Services (SSAS) experience Advanced performance tuning experience Team Foundation Services (Source Control) Advanced Excel experience Strong SQL Server development skills Completes functional database tasks under the direction of a lead to create and/or modify new and existing stored procedures as well as script out data
manipulation language (DML) queries for ad-hoc reporting Responsible for data delivery to numerous end users through direct access, web services, SSIS Familiar with database concepts of design and configuration Implements and maintains indexes, triggers and views for mission critical databases Tunes the database concepts of design and configuration Implements and maintains indexes, triggers and views for mission critical databases.
Works with limited supervision and relies on prior experience and judgement to fulfill assigned duties Collaborates with DBAs, data architect, software developers, system architects, and quality assurance to complete business needs Maintains and
improves on understanding of current Microsoft SQL Server and emerging Microsoft SQL Server technologies Technical solution Assist in definition of project scope, requirements and objectives involving all relevant stakeholders and ensuring technical
feasibility Manage project scope, schedule changes with all stakeholders Exposure to Agile delivery methods Face-off to business leads and senior management Provide development oversight for project team in terms of architecture compliance, interface design & review Conduct problem analysis and root cause investigation Proactive and provide quick turnaround to business
requirements and management requests Proven ability to translate user requirements into direct system solutions Prior delivery experience within Finance domain using Xceptor and/or recon tools and/or on BPM/ workflow Must have excellent verbal and write simple
business flows General familiarity with ETL, BPM processes and software development life cycle Experience with configuration and deployment of vendor products – preferably SQL Server T-SQL (Simple to moderately complex queries) Some expertise in reconciliation tools – Recon trade, frontier and/or
workflow tools and/or worked on SSIS on sql server .Net (Preferably c#) Microsoft Excel Architect: Use your experience to drive the design of highly performant and highly available data solutions Build: Build solutions that operate on massive amounts of data in high transaction volume applications Test: Work with your QA resources to ensure that the software you deliver is of the
highest quality. (Our customers are not beta testers.) 5+ years of deep database development experience Ability to analyze technical requirements and design new architectures, data models and ETL strategies Expertise database development experience Ability to analyze technical requirements and design new architectures, data models and ETL strategies Expertise database development experience Ability to analyze technical requirements and design new architectures, data models and ETL strategies Expertise database development experience Ability to analyze technical requirements and design new architectures, data models and ETL strategies Expertise database development experience Ability to analyze technical requirements and design new architectures, data models and ETL strategies Expertise database development experience Ability to analyze technical requirements and design new architectures, data models and ETL strategies Expertise database development experience Ability to analyze technical requirements and design new architectures, data models and ETL strategies Expertise database development experience Ability to analyze technical requirements and design new architectures, data models and ETL strategies Expertise database development experience Ability to analyze technical requirements and expertise and expertis
strategies and implementation Define Database Architecture and Development best practices Senior-level experience writing SQL, leveraging reporting and dashboard tools, creating ETL jobs, and expanding the data mart A thorough understanding of ETL, data analysis, and models Experience with user centered design and agile development techniques Minimum 5 years of
experience developing, maintaining, or writing stored procedures for databases (e.g., SQL, Excel and SSIS Provide technical assistance and advice Use data sets and database design knowledge to recommend, build and implement data solution Develop, enhance and maintain. Net
applications Degree qualification in a relatable subject Strong SQL Server skills High level of database knowledge – database knowledge – database design and modelling Strong data analysis skills and experience Drive to get to the bottom of issues Experience with large data sets Experience with reporting tools Opportunity to work with the latest technology and all the kit you want Chance to work with
Cambrian data set- both supporting and building Opportunity to work with high volumes of data and develop a career within big data Our culture; entrepreneurial, creative, collaborative and energetic Develop and maintain SQL Server Integration Service packages (SSIS) Create and support complex reports using
SQL Server Reporting Services (SSRS) Create stored procedures, views, tables, and indexes Extract and transform raw data into meaningful and actionable reports Display advanced T-SQL skills in writing complex queries for reports and transform raw data into meaningful and actionable reporting technologies such as Power BI Participate in meetings to help translate business
requirements into technical solutions Troubleshoot production issues with reports, SQL jobs, cubes, and packages Assist with project management activities by identifying project milestones, phases, and elements; tracking activities, resolving problems, and publishing progress reports Demonstrate firm grasp of Data Warehouse concepts (i.e. facts, dimensions, star schema)
Analyzes business requirements, designs, and writes technical procedures Develops original and/or complex code in T-SQL. Creates SSRS reports, SSIS packages, SQL Server objects, and web applications Verifies program logic by preparation of test cases and data,
performing testing, and debugging of programs Assures quality, security and compliance requirements are met for supported area and oversees updating and testing of the business continuation plan 5+ years MS SQL platform
development experience creating tables, store procedures, functions, Reporting Services Reports, SSIS packages Advanced data modeling capabilities including self-protecting data models and hormalization Knowledge of data warehouse design principles Experience with MS SQL Server performance tuning, locking, and blocking Experience TFS (Team Foundation Server) and
SharePoint Experience with change management, Water Fall and/or Agile Development 3+ years C# programming experience HTML 5, Java Script, and AngularJS programming experience With minimum direction Independently test and debug SQL code Quickly develop a solid
understanding of data used for surveillance purposes Manage multiple projects and tasks and progress them in parallel Clearly outline next steps, track due dates, and follow up with business partners Intermediate to advanced knowledge of SQL Some experience in Project Management Excellent analytical skills and strong quantitative skills Must be results oriented and a
motivated self-starter with a strong sense of urgency Ability and willingness to work in challenging situations with aggressive timelines A working knowledge of Unix Some knowledge of Perl and/or Python Degree in computer science, engineering, or related field Previous experience in the financial services industry – credit card experience is a plus Hadoop and
Agile knowledge is a plus 5 + yrs SQL experience(queries, stored procedures, functions) Bachelor's degree from four year college or university with emphasis in related field A self motivated individual with a passion for success Needs to be able to determine how changes impact customer and other systems Ability to quickly adapt and learn new technologies Strong customer and
business focus Understand available data sources and their relationships Work directly with end consumers (Actuarial, Claims, etc.) to analyze and solve problems Produce data extracts, data feeds and ETL processes (SSIS) in support of analyze and solve problems Produce data extracts, data feeds and their relationships Work directly with end consumers (Actuarial, Claims, etc.) to analyze and solve problems Produce data extracts, data feeds and ETL processes (SSIS) in support of analyze and solve problems Produce data extracts, data feeds and ETL processes (SSIS) in support of analyze and solve problems Produce data extracts, data feeds and ETL processes (SSIS) in support of analyze and solve problems Produce data extracts, data feeds and ETL processes (SSIS) in support of analyze and solve problems Produce data extracts, data feeds and ETL processes (SSIS) in support of analyze and solve problems Produce data extracts, data feeds and ETL processes (SSIS) in support of analyze and solve problems Produce data extracts, data feeds and ETL processes (SSIS) in support of analyze and solve problems Produce data extracts (SSIS) in support of analyze and solve problems Produce data extracts (SSIS) in support of analyze and solve problems Produce data extracts (SSIS) in support of analyze and solve problems Produce data extracts (SSIS) in support of analyze and solve problems Produce data extracts (SSIS) in support of analyze and solve problems Produce data extracts (SSIS) in support of analyze and solve problems Produce data extracts (SSIS) in support of analyze and solve problems Produce data extracts (SSIS) in support of analyze and solve problems Produce data extracts (SSIS) in support of analyze and solve problems Produce data extracts (SSIS) in support of analyze and solve problems Produce data extracts (SSIS) in support of analyze and solve problems Produce data extracts (SSIS) in support of analyze and solve problems (SSIS) in support of analyze and solve problems (SSIS) in support of analyze and solve problems (
queries or applications for accessing and analyzing data and associated metadata Debug / write advanced SQL statements Profile data to measure quality provide solutions to improve quality Perform unit and data reconciliation testing as appropriate Prepare documentations and specifications, including data flow, ER diagrams and technical specifications Work with
Database Administrators to design and adjust relational databases as needed Flexibility to adapt to rapidly changing business environment which will include learning new technologies or approaches Committed to meet delivery deadlines Must be able to self-direct and work with minimal supervision Displays personal and professional integrity Experience with ETL tools (MS SSIS,
Informatica, etc.) Strong proficiency with SQL and its variations amongst popular databases Ability to write complex T-SQL queries for MS SQL Server 2008+ server Ability to optimize large complicated SQL Statements A good understanding of fundamental insurance concepts Experience with modern relational databases like MS SQL Server 2012 Familiar with tools that can aid
with data profiling, like SQL Server Data Profiling Task and Viewer Proficient understanding of code versioning tools such as SVN or Git Experience with a business intelligence tool is a plus (Tableau, QlikView, MS PowerPivot) Experience working with data tools in the AWS environment is a plus Ability to work effectively in a team-oriented enterprise environment Ability to multi-
task and prioritize requests Strong written and verbal communication skills and follow through in driving consensus across various stakeholders Detail oriented and logical Passion to succeed and continually improve skills and exceed customer expectations This is a SQL 2016 role Needs someone that can implement SQL 2016 on an enterprise level Experienced in moving 2-3
Terabytes of Data Must have strong SSRS/ SSIS and Cube exp Someone that is a thinker and can problem solve Currently on SQL 2012 Data Modelling skill – good understanding of data and reporting/analysis requirements SSRS, SSIS development skill – experience with developing
complex SSAS cubes / models, and SSIS packages following some best practices of framework DBA skill – experience in query performance tuning Good understanding in database performance eounters/measurements will be added advantage. (not a requirement) Search Jobs US 5+ years of design and development experience with Microsoft SQL Server T-SQL and SSIS Good
communication (oral and written) and team work skills to work with both business users and other IT members General IT knowledge commensurate with a degree in computer science or equivalent experience some some some some of the communication (oral and written) and team work skills to work with both business users and other IT members General IT knowledge commensurate with a degree in computer science or equivalent experience.
data mappings, calculations, and flowchart all the process for Excel models. Enhance, maintain, processes which build analytic data assets in Excel and SQL server. Automate and improve commonly conducted analysis and calculations, and strategy development Responsible for all project lifecycle phases, from specifications and coding through deployment, testing, debugging,
documentation, and maintenance Create VBA programs and stored procedures to implement business requirements Develop GUI interfaces using VBA Excel programs extensively use Excel functions in development, focusing on read/write integration to databases 2-5 years of experience working with and manipulating data using SQL, ideally in a SQL Server environment
Thorough understanding of relational databases and how they work. Understanding of concepts such as Triggers, Functions, Joins, etc Reporting experience would be a nice to have, but is not mandatory 5+ years MS SQL Server 2014 or more current versions required 5+ years T-SQL 5+ years
writing stored procedures Strong analysis, problem solving and troubleshooting skills Experience designing and architecting solutions Experience with API integrations Provide day to day experience to development team, to include optimization and maintenance of existing systems Evaluate and identify new technologies for implementation Performance tuning, improvement,
usability and process automation Acquire broad and varied domain knowledge across multiple product verticals 2+ years experience in commercial .NET application development 2+ years of Data Warehouse and partitioning experience Software coding and analysis, requirements analysis, software review,
identification of code metrics, system and application tuning 5+ years of experience in SQL, ideally sybase Comfortable working knowledge of another general purpose language (java / python / C#) Ability to lead a small development team / project Comfortable working in a Unix environment Ability to work directly with a highly engaged group of users around the globe Sybase IQ
Actively participate in the design and maintenance of complex SSIS packages, SSRS reports, SSAS cubes, MSTR infrastructure Database object deployments and version control Assist DBAs in design, implementation and maintenance of business continuity strategies and disaster recovery plans Maintain Data Integrity between different environments Actively participate in Data
Encryption and masking of the sensitive data Work closely with the development for database objects (stored procedures/triggers/views) and performing code review Provide support for database objects (stored procedures/triggers/views) and performing code review Provide support for database objects (stored procedures/triggers/views) and performing code review Provide support for the build and deployment processes including packaging of database objects and documentation for the deployment of those packages Experienced, highly technical, and
motivated individual, capable of designing and developing complex reporting and analytical processes and application and DB and related tools (SSIS/SSRS/SSAS) Strong understanding of system architecture concepts and best practices,
methodologies for design, development, testing, and development and testing tools Experience with SSRS, SSAS,SSIS Good understanding of .NET technology or equivalent; Master's degree preferred Minimum of Five (5) years' experience as a Database Developer/Administrator
managing SQL databases of 500GB or larger Development using the Microsoft Development stack including SSIS, SSAS and SSRS Work with Business need Create and document technical designs to achieve project requirements Complete development/programming as
described in design specifications Prepare unit test plans and execute unit testing Participate in system and user acceptance testing tasks as assigned Adhere to Walter software development methodology and standards and execute unit testing participate in system and execute unit testing Participate in syst
enhance and maintain applications as required Maintain integrity of applications, follow standards Investigate and resolve system problems in a timely manner Update system documentation as needed SQL Server 2005/2008 6+ years .NET 3.5+ BCP utility SQL Programming Test data generation and unit testing methods Source code control and change management Worked
projects requiring a high degree of cross team collaboration and coordination Experience with normalized and de-normalized and de-normaliz
troubleshooting methods Has worked on large teams Implemented integration patterns Translate business requirements into analyses and reports using SSRS and SQL Create new reports as required and automate distribution of current reports using SSRS and SQL Create new reports as required and automate distribution of current reports using SSRS and SQL Create new reports using SSRS and SQL Create new reports as required and automate distribution of current reports using SSRS and SQL Create new reports using SSRS and SQL Create new reports as required and automate distribution of current reports using SSRS and SQL Create new reports using
managers to understand their requirements and create reports tailored to meet their needs Responsible for managing assigned tasks and small projects, ensuring the quality of the deliverables Maintain client relationships through the delivery of high quality work Maintains existing solutions and develop new platforms or procedures to solve complications that may arise in the
future Effectively collaborate with both technical and non technical and non technical staff; translate business needs into technical requirements and ensure that the information being requested and provided make sense in the context of what is being asked Develops
team members to enhance productivity on projects through the use of various techniques Seek obtain, monitor, and report generation functions Develop expertise in the business processes and data Contributes skills and knowledge to other database and
reporting projects as determined by management Develop documentation to support ongoing maintenance and upkeep of applications Providers analytical services for business data needs and makes recommendations for viable solutions Troubleshoots data issues, validates results sets, recommends and implements process improvements One year of work experience required,
preferably in healthcare, insurance or managed care field One year of hands-on Crystal or SRSS experience preferred Basic problem-solving skills required SQL/T-SQL Crystal Reports/SRSS Proven experience of SQL Server 2005 or above Advanced level of experience using MS Excel (Macros, Formula etc.) Experience in Automation VBA / Task Scheduler / SSIS would be
advantageous Experience of SQL SSRS (reporting Services) A willingness to work independently using own initiative A genuine interest in data analysis and insight 7-10 years SQL Development experience (Majority of code is already written) TFS is a nice to have but not a must Problem solving ) 4+ years of SQL Development experience ) 3+ years of Microsoft
SQL Server 2012 or 2014 ) 3+ years of SSIS Development or Support experience is a plus 3+ years of Microsoft SQL Server 2012 or later and SSIS development/support experience Exmiliarity with Star Schema design and implementation Experience using SQL Server 2012 or later and SSIS Development or Support experience is a plus 3+ years of Microsoft SQL Server Integration Services (SSIS), including Package automation across environments Package
configuration encryption Logging and error handling Scripting in .NET -For OAR position Microsoft SQL Server Analytics development experience Implementation of relational data warehouses Troubleshooting in an analytics environment - For NVIS position 1+ years in Microsoft Azure Cloud development and deployment Strong knowledge/hands-on experience with Azure SQL
Data Warehouse, Azure SQL Databases, Blob Storage, App Service Troubleshooting in Azure cloud environment to design, develop and implement solutions to meet business needs A passion to learn new technologies and skills Develop and deploy maintenance items, and small to
medium size enhancements Develop new functionality to support product buildouts in various data marts/warehouses Provide support as needed for vendor's off-shore technical team; e.g. run queries, obtain database backups, etc Conform to Change Management practice and test/deploy changes while protecting production Responsible for multiple data integration products that
land in various data marts/warehouses Requires advanced technical and business knowledge Experience with Informatica Power Center preferably 10.1 Familiar with Relational Database Concepts; SQL Server and Oracle Experience with tools such as MS SQL Server Management Studio and TOAD 3-5 years developing ETL code within a SDLC environment Bachelor's Degree
in Computer Science or Information Systems (or equivalent related experience in data warehouse design (e.g., MS Azure, AWS) 5+ years experience in business intelligence reporting including relevant job experience with SSRS and data visualization platforms (e.g., Power BI, Tableau, Qlik) Experience using Javascript and Javascript libraries to create
custom reporting visuals Passion for creating visuals Passion for creating visually pleasing reports. The ideal candidate will have portfolio of sample work showcasing the candidate's aesthetic sensibilities Strong understanding of relational and dimensional database structures, theories, principles, and practices in relationship to business strategy and goals Strong T-SQL knowledge and skills Sound
understanding of MDM concepts with hands on experience with technical development and batabase/SQL development and database/SQL development for MDM and DQ technologies (data modeling, quality and profiling) Experience with technical development and database/SQL development and database/SQL development and support for MDM and DQ technologies (data modeling, quality and profiling) Experience with technical development and database/SQL development and database/SQL development and database/SQL development and support for MDM and DQ technologies (data modeling, quality and profiling) Experience with technical development and database/SQL development a
programming languages Ability to resolve semantic discrepancies in data definitions that arise among multiple sources and projects Knowledge of MDX & DAX skills preferred Must have a B.S. degree or higher (Computer Science, Business or Information Technology or related field preferred) Expertise troubleshooting data quality issues, performance bottlenecks and data pipeline
dependencies Reliable self-starter capable of working with a high degree of autonomy Examples of previously developed products Experience working in an fast-paced, agile development environment Thrives in a dynamic work en
achieve challenging goals An interest in keeping up-to-date with emerging and new technologies A bachelor's or a master's degree in an engineering discipline is required A degree in Computer Science is a must (strongly preferred) Experience in Microsoft Visual Studio software development using C# under .Net is required Experience developing software in multi-threaded / multi-
processor environments is strongly Preferred Experience with Software integration and debugging is required Must have a knowledge and understanding of OOD and OO methodology, full SDLC processes, UML, sequence diagrams, and software unit testing Must be able and willing to document implementation and participate in code reviews Must have experience with windows
Embedded OS and its internal mechanism Maintain documentation on integration design, possibly including relationship diagrams, package documentation will be required; however, the position does not typically require call Create packages, procedures, and functions
inside various on premise and cloud database systems in order to build, maintain and enhance integrations between our databases and partner systems and cloud database systems would be beneficial as would basic Windows and partner systems and partner systems and cloud database systems in order to build, maintain and enhance integrations between our databases and partner systems and cloud database systems would be beneficial as would basic Windows and partner systems and cloud database systems would be beneficial as would basic Windows and partner systems and cloud database systems would be beneficial as would basic Windows and partner systems and cloud database systems in order to build, maintain and enhance integrations between our databases and partner systems are supported by the control of the control 
PowerShell with an emphasis on Active Directory and SQL modules Provide database performance-tuning and bottleneck troubleshooting expertise for internal systems in SQL Server Provide support for existing production Deliver a robust,
testable, repeatable framework of jobs and scripts for managing data and producing reconciliation reports to confirm success or failure Database Administrator and very strong SQL Developer with excellent T-SQL and experience of SQL Server Integration Services and strong knowledge of ETL techniques Responsible for design, development and management of high quality,
efficient and effective solutions in Microsoft SQL Server T-SQL, Integration Services and related tools to support a number of large-scale data intensive projects Strong background in data management and data manipulation, code management, version control and release management 8-10 years of experience of SQL programming (T-SQL, SSIS, SSAS) Advanced working
knowledge of the functionality and capabilities of MS SQL Server Developer will support new product developer will suppor
advanced ETL processes to acquire and load large datasets and improve efficiency of existing ETL processes The SQL Server Developer will work closely with Application Developers to ensure proper design and implementation of database systems The SQL Server
Developer will develop, troubleshoot and tune T-SQL scripts Experience with large scale database design and development on the Microsoft SQL Server 2005/2008/2012 platform Understanding of advanced SQL Server features such as replication, service broker, and high-availability clusters Proficiency with dynamic SQL Experience developing custom and/or dynamic schemas
Experience with working in a highly sharded environment requiring significant cross-server data flows Must possess strong organizational, problem-solving, and time management skills with ability to manage multiple projects at the same time Must be able to work in an agile time-critical environment and be decisive when faced with complex problems Ability to give and receive
constructive feedback and the capability to be self-motivated and work independently with initiative Ability to quickly understand new concepts/processes 5+ years experience with enterprise level software development, with at least 3 years recent experience developing or administering SQL Server applications Prior experience working with very large datasets or data warehouse
technology highly desirable Experience with complex query optimization and performance benchmarking is a plus Experience with campaign/volunteer management or fundraising applications is desirable Exposure to cloud based database technologies is helpful In-depth knowledge
of the data feeds coming from NCIRCLE, IPSONAR, ETB, DFTS and NCIRCLE vulnerability files (ASPLs) In-depth knowledge of designing SSIS solutions for custom data feeds In-depth knowledge of integrating WCF with Sourcefire SEIM In-depth
knowledge of SQL Server 2012 clustering, including building from scratch and maintenance In-depth knowledge of SQL Server 2012 database administration Knowledge of wing Visual Studio 2010 and Visual Studio 2013 In-depth knowledge of debugging
SharePoint 2010, WCF, C# and SSIS and SSRS In-depth knowledge of debugging and designing reports (SSRS 2012) In-depth knowledge of TFS2013 especially with regard to bug tracking and source code control Knowledge of VMWare Knowledge of
storage backup, in particular HP Data Protector Experience of 4th line support Knowledge of data warehousing and architectural capacity / performance management principals, processes and toolsets across multiple platforms Ability to review changes that will impact the Watchtower solution Knowledge of Skybox Experience in producing design documentation Report and
escalate as appropriate related risks and issues to the Business and subsequent mitigation plans In-depth knowledge of SQL Server 2012 performance analysis Experience in analysing SQL Query Plans Experience of developing the SEIM to integrate with SP2010 DV Clearance Swindon based (due to security of role, specific network requirement) Microsoft Certified Profession
(SQL Server) NCIRCLE administration IPSONAR administration ENDACE administration ENDACE administration Knowledge of numerous Cyber Security tools such as NCIRCLE SQL Server Reporting Services (SSRS 2012, 2008 R2) TFS 2013 Visual Studio 2013, 2010 IIS 7, IIS 6,
IIS 5 Experience with numerous .NET frameworks (4.5, 4. 3.5, 2, 1.1) Relationship Management with Suppliers, Colleagues, Management and Customers Service Delivery and Planning ability Self-driven motivation to investigate and resolve issues, risks, problems and changes Drive towards continuous Service Improvement Demonstrate an ability to work under pressure and to
deliver to tight time-scales Seeking self-starting, motivated individual interested in a position implementing/supporting a plant floor environment Position includes interface support between other applications, and be comfortable working in a dynamic, fast-paced environment Position includes interface support between other applications.
application configuration, issue investigation/resolution and interface development Troubleshooting / Debugging experience UNIX Shell Scripting Systems Development Lifecycle SQL Server T-SQL programing experience (create/modify Stored procedures and functions; general SQL statement writing – selects, updates/deletes) Requirements gathering/documentation 7+ years of
SOL Development/DBA experience A good working knowledge of Microsoft SOL Server stack of technologies; including .NET, ANSI/T-SOL, SSMS, SSIS, SSRS, etc Excellent problem solving skills with an analytical mindset Previous experience with Insurance and Wireless (Cell Phone) Industries is a plus Bachelor's Degree in Computer Science, Management Information
Systems, or equivalent related practical experience Excellent analytical capabilities and problem solving skills coupled with good communication skills Design and develop solutions for multiple platforms Data migration activities for specific projects Database production
support Work directly with executives and clients in solving business problems Assist users as needed with daily support requests as needed 5 or more years experience working with MS SQL Server, including SSRS and SSIS 3 or more years working with
professional software development teams Proven ability to multi-task and work on multiple projects and/or support issues Should be very comfortable with rapid deployment teams Proven ability to multi-task and work on multiple projects and/or support issues Should be very comfortable with rapid deployment teams Proven ability to multi-task and work on multiple projects and/or support issues Should be very comfortable with rapid deployment teams Proven ability to multi-task and work on multiple projects and/or support issues Should be very comfortable with rapid deployment teams Proven ability to multi-task and work on multiple projects and/or support issues Should be very comfortable with rapid deployment teams Proven ability to multi-task and work on multiple projects and/or support issues Should be very comfortable with rapid deployment teams Proven ability to multi-task and work on multiple projects and/or support issues Should be very comfortable with rapid deployment teams Proven ability to multi-task and work on multiple projects and/or support issues Should be very comfortable with rapid deployment teams Proven ability to multi-task and work on multiple projects and/or support issues Should be very comfortable with rapid deployment teams Proven ability to multi-task and work on multiple projects and the project is support is support to the project is support to the pr
Planned Project Related Work Experienced in SQL Server 2008 R2 / SQL Server 2012 A working knowledge of performance monitoring on SQL Server 2014 Experienced in Windows Server 2012 A working knowledge of performance monitoring on SQL Server 2014 Experienced in Windows Server 2018 R2 / SQL Server 2018 R
SQL Server Integration Services (SSDT) skills from environment implementation/maintenance to individual package builds Highly proficient in T-SQL (DML, DDL, DCL, TCL) and DBCC commands Data modeling, design and creation of schemas Strong knowledge in performance tuning of queries/Stored Procedures through execution plan analysis and Index implementation SQL
Server security – planning and best practices Ability to communicate technically/non technically with all areas of the business Design, analyze, develop, test, debug, and document the DB components using PL/SQL and SQL Queries necessary to meet the business requirements of varying size and complexity Perform code reviews and assist the team in supporting the application
in all required environments Partner with the Project Managers, Product Owners, SMEs and Business Analysts to develop project estimates Regularly interacting with Operations and Technology partners located around the world including, Chicago, New York, Louisville, Delaware, Houston, London, Bournemouth, Singapore, Mumbai and Bangalore Minimum 5-9 years of PL/SQL
and SQL Development Experience Necessary Technology Experience exception handling, transactions, profiling queries, performance counters, and debugging techniques Strong experience with data loads, normalization, stored procedures, and table
changes Create and develop database objects to meet complex business requirements storing your code in source control (SSDT) SQL Performance tuning Managing and maintaining multiple data flows in and out of the business using SSIS Create ETL packages to support business requirements To be actively involved with all stages of the software development lifecycle; from
initial analysis & specification through to implementation, developer testing and support (bug fixing) Provide technical support, patches and enhancements to existing solutions Production processes Plan and analyze requirements and design and
develop databases Define back-end database structures from a logical or application-oriented perspective to ensure that all front-end development efforts correlate with the appropriate tables and fields required by the system Create queries, view, stored procedure and work in conjunction with developer or business users to make sure the business data requirements are met
Create and maintain various SQL Server –based applications Design and implement database scheme and process flow Administration; square optimization; square optimization; square applications development and systems architecture A minimum 5+ years of T-SQL Server –based applications development and systems architecture A minimum 5+ years of T-SQL Server –based applications development and systems architecture A minimum 5+ years of T-SQL Server –based applications development and systems architecture A minimum 5+ years of T-SQL Server –based applications development and systems architecture A minimum 5+ years of T-SQL Server –based applications development and systems architecture A minimum 5+ years of T-SQL Server –based applications development and systems architecture A minimum 5+ years of T-SQL Server –based applications development and systems architecture A minimum 5+ years of T-SQL Server –based applications development and systems architecture A minimum 5+ years of T-SQL Server –based applications development and systems architecture A minimum 5+ years of T-SQL Server –based applications architecture A minimum 5+ years of T-SQL Server –based applications architecture A minimum 5+ years of T-SQL Server –based applications architecture A minimum 5+ years of T-SQL Server –based applications architecture A minimum 5+ years of T-SQL Server –based applications architecture A minimum 5+ years of T-SQL Server –based applications architecture A minimum 5+ years of T-SQL Server –based applications architecture A minimum 5+ years of T-SQL Server –based applications architecture A minimum 5+ years of T-SQL Server –based applications architecture A minimum 5+ years of T-SQL Server –based applications architecture A minimum 5+ years of T-SQL Server –based applications architecture A minimum 5+ years of T-SQL Server –based applications architecture A minimum 5+ years of T-SQL Server –based applications architecture A minimum 5+ years of T-SQL Server –based applications architecture A minimum 5+ years of T-SQL Server –ba
experience - performance tuning, stored procedures, triggers, views Primary Skill: SQL Programming Additional Skills: SQL Programming, Data Modeling, SQL & PL/SQL Capable of gathering requirements from key stakeholders and transform them into technical design Assist in the implementation of continuous delivery initiative within the team Work as an SQL/Java Developer
and establish strong relationships with end users and technical resources throughout established projects Ability to optimise SQL Code and suggest improvements to Architecture Knowledge of continuous delivery Process for Databases Experience of Java 2) SSRS 3) Reporting 4) Familiarity with Accounting/Finance Position keeping End of day trade reporting Involved in
designing and developing components for front office transactional processing system in line the stated design and architectural framework defined by the team Continuous improvement and refactoring of the existing product Refactoring of the existing product Refactoring and reviewing the SQL code being part of the trade data store Assisting in all phases of development, deployment and some ongoing support
Experience in SQL - 3+years Experience and knowledge in SQL query optimization (analysis, performance tuning) Writing stored procedures and functions Views Familiarity with continuous integration/deployment tools (JIRA, svn/git, UnitTest, CI, Nuget) General knowledge of design principles (SOLID) Experience in Windows Server and RedHat
operating systems Red Gate SQL tools Code, test, debug, and document projects Assist in developing detailed specification processes and quality validation (when appropriate) for small to medium projects Assist in developing detailed specification processes and quality validation (when appropriate) for small to medium projects Assist in developing detailed specification activities following SDLC processes and quality validation (when appropriate) for small to medium projects Assist in developing detailed specification activities following SDLC processes and quality validation (when appropriate) for small to medium projects Assist in developing detailed specification activities following SDLC processes and quality validation (when appropriate) for small to medium projects Assist in developing detailed specification activities following SDLC processes and quality validation (when appropriate) for small to medium projects Assist in developing detailed specification activities following SDLC processes and quality validation (when appropriate) for small to medium projects Assist in developing detailed specification activities following SDLC processes and quality validation (when appropriate) for small to medium projects Assist in developing detailed specification activities for small to medium projects Assist in developing detailed specification activities for small to medium projects Assist in developing detailed specification activities for small to medium projects Assist in developing detailed specification activities for small to medium projects Assist in developing detailed specification activities for small to medium projects Assist in developing detailed specification activities for small to medium projects Assist in developing detailed specification activities for small to medium projects Assist in developing detailed specification activities for small to medium projects Assist in developing detailed specification activities for small to medium projects Assist in developing detailed specification activities f
and system testing Assist in support of production systems. Develop problem-solving skills to assist in resolution of business problems and trend and identify opportunities Develop relationships with businesses and functions to understand their needs. Continue to develop business or functional knowledge by responding to
and resolving user questions, problems and inquiries. Work with the business or function to assist in the discussion of proposed solutions and define user requirements Increase exposure to the technical infrastructure Resolve data integration issues A minimum of 7 years of IT experience as a SQL Developer in Database Design, Development, Testing, and Production
Environments A minimum of 5 years of SQL Server BI development (SSRS/SSIS) experience, including good understanding of report authoring, report management, report ma
Report development and data modeling in Microsoft Power BI is a plus Create, optimize and maintain complex T-SQL as part of stored procedures, triggers, functions to support complex business processes Develop and deliver extensible and
sustainable database solutions based on defined business needs Perform testing and troubleshooting Document database architecture, codes and user instructions Well organized, with a strong desire to document accurately Bachelor's Degree Computer Science/Engineering or related field Total and Relevant Experience Deal capture and data storage Experience in SQL –
3+years Familiarity with Microsoft SQL Server 2008 R2 Willing to constantly improve skills and learn new technologies You have experience in C# (.NET) – 2+years You are familiar with continuous integration/deployment and development, deployment tools (JIRA, svn/git, UnitTest, CI, Nuget) General knowledge with design principles (SOLID) Dynamic SQL Work with business
analysts and business representatives to define & clarify requirements, perform detailed analysis, develop detailed designs, and implement robust, maintainable solutions that meet the business requirements, perform detailed analysis and technical analysts to
assess and understand business' data requirements Development, implement and maintain ETL (SSIS) packages and related data processes Create and maintain client facing reports Write stored procedures of high complexity to meet product requirements Deliver client facing solutions that meets specifications, are free of defects, and have optimal performance Participates in
the requirement gathering phase of projects Write SQL queries for data analysis and problem solving Develop and maintain effective and professional working partnerships within IT and other business units Conduct performance enalysis to ensure solutions provide optimal performance Evaluate emerging technologies to identify opportunities, trends and best practices that can be
leveraged to strengthen HBC's technology platform and development practices Partners with appropriate team members and corporate groups throughout the development practices Partners with appropriate team members and corporate groups throughout the development practices Partners with appropriate team members and corporate groups throughout the development practices Partners with appropriate team members and corporate groups throughout the development practices Partners with appropriate team members and corporate groups throughout the development practices Partners with appropriate team members and corporate groups throughout the development practices Partners with appropriate team members and corporate groups throughout the development practices Partners with appropriate team members and corporate groups throughout the development practices Partners with appropriate team members and corporate groups throughout the development practices Partners with appropriate team members and corporate groups throughout the development practices providing development practices providing development process.
estimates to Technical Lead or Project Manager Escalating issues with the functional design to Technical Lead for remediation Minimum 5 years' experience with SSAS Experience with TFS Team Foundation Server Design, development, maintenance and testing of
```

ETL interfaces for applications and the corporate data warehouse ensuring solutions adhere to agreed technical and operational standards Provision of 3rd line support for all SSIS based system integrations identifying suitable solutions Monitoring and performance tuning of ETL processes Review and rewrite of existing Microsoft DTS

packages to latest version of SSIS Work with Business Analysts, IT Managers and IT Development Manager to define and document the technical scope and objectives of projects and provide an estimate of the effort required Establish and ensure the continued use of standards and procedures for software development and document and document the technical scope and objectives of projects and provide an estimate of the effort required Establish and ensure the continued use of standards and procedures for software development and document and document the technical scope and objectives of projects and provide an estimate of the effort required Establish and ensure the continued use of standards and procedures for software development and document and document the technical scope and objectives of projects and provide an estimate of the effort required Establish and ensure the continued use of standards and procedures for software development and document and document the technical scope and objectives of projects and provide an estimate of the effort required Establish and ensure the continued use of standards and procedures for software development and document and document the technical scope and objectives of projects and provide an estimate of the effort required Establish and ensure the continued use of standards and procedures for software development and objectives of projects and provide an estimate of the effort required Establish and ensure the continued use of standards and provide an estimate of the effort required Establish and ensure the continued use of standards and provide an estimate of the effort required Establish and ensure the continued use of standards and provide an estimate of the effort required Establish and ensure the continued use of standards and provide an establish and establish an
