PART B: WRITTEN RESPONSE

Value: 24 marks

Suggested Time: 30 minutes

INSTRUCTIONS: Answer the following questions in the space provided in the **Response Booklet**.

Rough-work space has been incorporated into the space allowed for answering each question. You may not need all the space provided to answer each question.

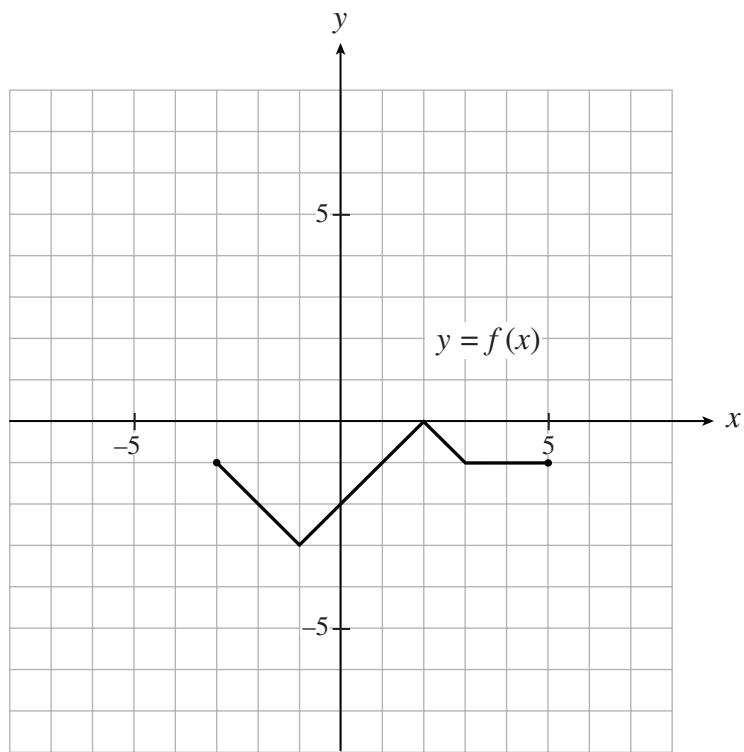

If, in a justification, you refer to information generated by a graphing calculator, this information must be presented clearly in the response. If the statistical features of the calculator are used, it is important to show the function with the substitution of the relevant numbers. For example: in part of the solution it is acceptable to show `binomcdf(20, 0.5, 10)` or the equivalent syntax for the calculator used.

When using the calculator, you should provide a decimal answer that is **accurate to at least two decimal places** (unless otherwise indicated). Such rounding should occur **only** in the final step of the solution.

Full marks will NOT be given for a final answer only.

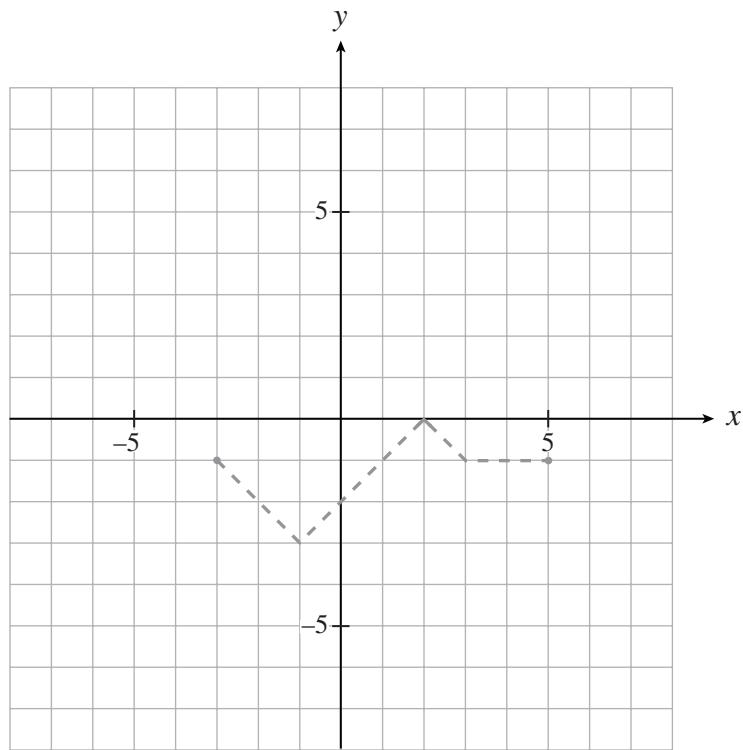

Use the following graph to answer questions 1 and 2.

The graph of $y = f(x)$ is shown below.

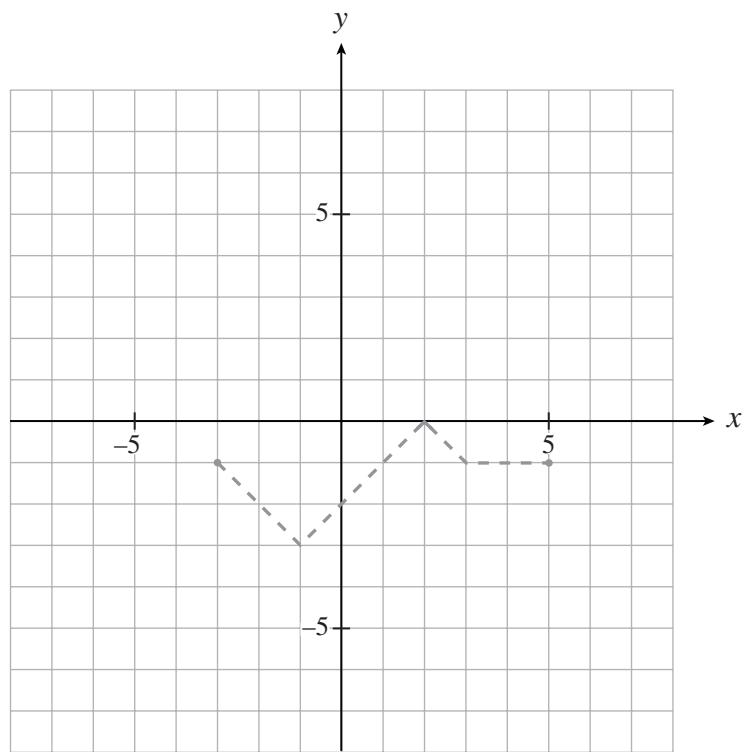

1. On the grid provided, sketch the graph of $y = -|f(x) + 2|$.

(3 marks)

2. On the grid provided, sketch the graph of $y = \frac{1}{f(x)}$.

(2 marks)

3. In a population of moths, 78 moths increase to 1000 moths in 40 weeks. What is the doubling time for this population of moths?

(Solve algebraically using logarithms. Answer accurate to at least 2 decimal places.)

(5 marks)

4. It is known that 15% of teenagers ride skateboards. Three teenagers are chosen at random. Given that at least one of the three teenagers chosen rides a skateboard, determine the probability that all three teenagers ride skateboards.

(Answer accurate to at least 4 decimal places.)

(5 marks)

5. Solve algebraically, giving exact values for x , where $0 \leq x < 2\pi$.

$$2\sin^2 x + \sqrt{3} \sin x = 0$$

(3 marks)

6. The smallest positive solution of $\tan 3x = 0.6$ is $x = 0.18$. Determine the general solution for $\tan 3x = 0.6$. **(1 mark)**

7. Prove the identity:

(5 marks)

$$\frac{\sin \theta}{1 - \sin \theta} + \frac{\sin \theta}{1 + \sin \theta} = \sin 2\theta \sec^3 \theta$$

1. The time allotted for this examination is two hours.
You may, however, take up to 60 minutes of additional time to finish.
2. Answers entered in the Examination Booklet will not be marked.
3. Cheating on an examination will result in a mark of zero. The Ministry of Education considers cheating to have occurred if students break any of the following rules:
 - Students must not be in possession of or have used any secure examination materials prior to the examination session.
 - Students must not communicate with other students during the examination.
 - Students must not give or receive assistance of any kind in answering an examination question during an examination, including allowing one's paper to be viewed by others or copying answers from another student's paper.
 - Students must not possess any book, paper or item that might assist in writing an examination, including a dictionary or piece of electronic equipment, that is not specifically authorized for the examination by ministry policy.
 - Students must not copy, plagiarize or present as one's own, work done by any other person.

 - Students must not remove any piece of the examination materials from the examination room, including work pages.
4. The use of inappropriate language or content may result in a mark of zero being awarded.
5. Upon completion of the examination, return all examination materials to the supervising invigilator.
