About the Author xv

Preface xvi

Introduction xvii

Chapter 1 Strategy and Competition 1

Chapter Overview 1 Snapshot Application: Apple Adopts a New Business Strategy and Shifts Its Core Competency from Computers to Portable Music 3 Manufacturing Matters 5 1.1 Manufacturing Jobs Outlook 6 1.2 A Framework for Operations Strategy 7 Strategic Dimensions 8 The Classical View of Operations Strategy 1.3 - 9 Time Horizon 9 Focus 11 Evaluation 12 Consistency 12 1.4 Competing in the Global Marketplace 14 Problems for Sections 1.1–1.4 16 Snapshot Application: Global Manufacturing Strategies in the Automobile Industry 17 1.5 Strategic Initiatives: Reengineering the Business Process 18 1.6 Strategic Initiatives: Just-in-Time 21 1.7 Strategic Initiatives: Time-Based Competition 23 1.8 Strategic Initiatives: Competing on Quality 24 Problems for Sections 1.5–1.8 26 Matching Process and Product 1.9 Life Cycles 27 The Product Life Cycle 27 The Process Life Cycle 28 The Product–Process Matrix 29 Problems for Section 1.9 31 **1.10** Learning and Experience Curves 31 Learning Curves 32 Experience Curves 34 Learning and Experience Curves and Manufacturing Strategy 36 Problems for Section 1.10 36

1.11 Capacity Growth Planning: A Long-Term Strategic Problem 38 Economies of Scale and Economies of Scope 38 Make or Buy: A Prototype Capacity Expansion Problem 39 Dynamic Capacity Expansion Policy 40 Issues in Plant Location 44 Problems for Section 1.11 46
1.12 Summary 47 Additional Problems for Chapter 1 48
Appendix 1-A Present Worth Calculations 50 Bibliography 51

Chapter 2 Forecasting 52

- Chapter Overview 52
- 2.1 The Time Horizon in Forecasting 55
- 2.2 Characteristics of Forecasts 56
- **2.3** Subjective Forecasting Methods 56
- 2.4 Objective Forecasting Methods 57 Causal Models 57 Time Series Methods 58 Snapshot Application: Advanced Forecasting, Inc., Serves the Semiconductor Industry 59 Problems for Sections 2.1–2.4 59
- **2.5** Notation Conventions 61
- **2.6** Evaluating Forecasts 61 Problems for Section 2.6 63
- 2.7 Methods for Forecasting Stationary Series 64 Moving Averages 64 Problems on Moving Averages 67 Exponential Smoothing 67 Multiple-Step-Ahead Forecasts 71 Comparison of Exponential Smoothing and Moving Averages 72 Problems for Section 2.7 73 Snapshot Application: Sport Obermeyer Slashes Costs with Improved Forecasting 74
 2.8 Trend-Based Methods 75 Regression Analysis 75 Problems for Section 2.8 76
 - Double Exponential Smoothing Using Holt's Method 77 More Problems for Section 2.8 78

Seasonal Factors for Stationary Series 79 Seasonal Decomposition Using Moving Averages 81 Problems for Section 2.9 83 Winters's Method for Seasonal Problems 84 More Problems for Section 2.9 89 2.10 Box-Jenkins Models 89 Estimating the Autocorrelation Function 90 The Autoregressive Process 93 The Moving-Average Process 94 Mixtures: ARMA Models 96 ARIMA Models 96 Using ARIMA Models for Forecasting 98 Summary of the Steps Required for Building ARIMA Models 99 Case Study: Using Box-Jenkins Methodology to Predict Monthly International Airline Passenger Totals 100 Snapshot Application: A Simple ARIMA Model Predicts the Performance of the U.S. Economy 104 Box-Jenkins Modeling—A Critique 104 Problems for Section 2.10 104 2.11 Practical Considerations 105 Model Identification and Monitoring 105 Simple versus Complex Time Series Methods 106 2.12 Overview of Advanced Topics in Forecasting 107 Simulation as a Forecasting Tool 107 Forecasting Demand in the Presence of Lost Sales 108 2.13 Linking Forecasting and Inventory Management 110 Snapshot Application: Predicting Economic Recessions 111 2.14 Historical Notes and Additional Topics 112 2.15 Summary 113 Additional Problems on Forecasting 113 Appendix 2–A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2–A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2–C Glossary of Notation for Chapter 2 122 Bibliography 122	2.9	Methods for Seasonal Series 79				
Seasonal Decomposition Using Moving Averages 81 Problems for Section 2.9 83 Winters's Method for Seasonal Problems 84 More Problems for Section 2.9 89 2.10 Box-Jenkins Models 89 Estimating the Autocorrelation Function 90 The Autoregressive Process 93 The Moving-Average Process 94 Mixtures: ARMA Models 96 ARIMA Models 96 Using ARIMA Models for Forecasting 98 Summary of the Steps Required for Building ARIMA Models 99 Case Study: Using Box-Jenkins Methodology to Predict Monthly International Airline Passenger Totals 100 Snapshot Application: A Simple ARIMA Model Predicts the Performance of the U.S. Economy 104 Box-Jenkins Modeling—A Critique 104 Problems for Section 2.10 104 2.11 Practical Considerations 105 Model Identification and Monitoring 105 Simple versus Complex Time Series Methods 106 2.12 Overview of Advanced Topics in Forecasting 107 Simulation as a Forecasting Tool 107 Forecasting Demand in the Presence of Lost Sales 108 2.13 Linking Forecasting and Inventory Management 110 Snapshot Application: Predicting Economic Recessions 111 2.14 Historical Notes and Additional Topics 112 2.15 Summary 113 Additional Problems on Forecasting 113 Appendix 2–A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2–B Derivation of the Equations for the Slope and Intercept for Regression Analysis 120 Appendix 2–C Glossary of Notation for Chapter 2 122 Bibliography 122		Seasonal Factors for Stationary Series 79				
Averages 81 Problems for Section 2.9 83 Winters's Method for Seasonal Problems 84 More Problems for Section 2.9 89 2.10 Box-Jenkins Models 89 Estimating the Autocorrelation Function 90 The Autoregressive Process 93 The Moving-Average Process 94 Mixtures: ARMA Models 96 Using ARIMA Models 96 Using ARIMA Models 97 Case Study: Using Box-Jenkins Methodology to Predict Wonthly International Airline Passenger Totals 100 Snapshot Application: A Simple ARIMA Model Predicts the Performance of the U.S. Economy 104 Box-Jenkins Modeling—A Critique 104 Problems for Section 2.10 104 2.11 Practical Considerations 105 Model Identification and Monitoring 105 Simple versus Complex Time Series Methods 106 2.12 Overview of Advanced Topics in Forecasting 107 Simulation as a Forecasting Tool 107 Forecasting Demand in the Presence of Lost Sales 108 2.13 Linking Forecasting and Inventory Management 110 Snapshot Application: Predicting Economic Recessions 111 2.14 Historical Notes and Additional Topics 112 2.15 Summary 113 Additional Problems on Forecasting 113 Appendix 2–A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2–B Derivation of the Equations for the Slope and Intercept for Regression Analysis 120 Appendix 2–C Glossary of Notation for Chapter 2 122 Bibliography 122		Seasonal Decomposition Using Moving				
 Problems for Section 2.9 83 Winters's Method for Seasonal Problems 84 More Problems for Section 2.9 89 2.10 Box-Jenkins Models 89 Estimating the Autocorrelation Function 90 The Autoregressive Process 93 The Moving-Average Process 94 Mixtures: ARMA Models 96 ARIMA Models 96 Using ARIMA Models for Forecasting 98 Summary of the Steps Required for Building ARIMA Models 99 Case Study: Using Box-Jenkins Methodology to Predict Monthly International Airline Passenger Totals 100 Snapshot Application: A Simple ARIMA Model Predicts the Performance of the U.S. Economy 104 Box-Jenkins Modeling—A Critique 104 Problems for Section 2.10 104 2.11 Practical Considerations 105 Model Identification and Monitoring 105 Simple versus Complex Time Series Methods 106 2.12 Overview of Advanced Topics in Forecasting 107 Simulation as a Forecasting Tool 107 Forecasting Demand in the Presence of Lost Sales 108 2.13 Linking Forecasting and Inventory Management 110 Snapshot Application: Predicting Economic Recessions 111 2.14 Historical Notes and Additional Topics 112 2.15 Summary 113 Additional Problems on Forecasting 113 Appendix 2–A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2–A Eoerivation of the Equations for the Slope and Intercept for Regression Analysis 120 Appendix 2–C Glossary of Notation for Chapter 2 122 Bibliography 122 		Averages 81				
 Winters's Method for Seasonal Problems 84 More Problems for Section 2.9 89 2.10 Box-Jenkins Models 89 Estimating the Autocorrelation Function 90 The Autoregressive Process 93 The Moving-Average Process 94 Mixtures: ARMA Models 96 ARIMA Models 96 Using ARIMA Models for Forecasting 98 Summary of the Steps Required for Building ARIMA Models 99 Case Study: Using Box-Jenkins Methodology to Predict Monthly International Airline Passenger Totals 100 Snapshot Application: A Simple ARIMA Model Predicts the Performance of the U.S. Economy 104 Box-Jenkins Modeling—A Critique 104 Problems for Section 2.10 104 2.11 Practical Considerations 105 Model Identification and Monitoring 105 Simple versus Complex Time Series Methods 106 2.12 Overview of Advanced Topics in Forecasting 107 Simulation as a Forecasting Tool 107 Forecasting Demand in the Presence of Lost Sales 108 2.13 Linking Forecasting and Inventory Management 110 Snapshot Application: Predicting Economic Recessions 111 2.14 Historical Notes and Additional Topics 112 2.15 Summary 113 Additional Problems on Forecasting 113 Appendix 2–A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2–C Glossary of Notation for Chapter 2 122 Bibliography 122		Problems for Section 2.9 83				
More Problems for Section 2.9 89 2.10 Box-Jenkins Models 89 Estimating the Autocorrelation Function 90 The Autoregressive Process 93 The Moving-Average Process 94 Mixtures: ARMA Models 96 ARIMA Models 96 Using ARIMA Models for Forecasting 98 Summary of the Steps Required for Building ARIMA Models 99 Case Study: Using Box-Jenkins Methodology to Predict Monthly International Airline Passenger Totals 100 Snapshot Application: A Simple ARIMA Model Predicts the Performance of the U.S. Economy 104 Box-Jenkins Modeling—A Critique 104 Problems for Section 2.10 104 2.11 Practical Considerations 105 Model Identification and Monitoring 105 Simulation as a Forecasting Tool 107 Forecasting 107 Simulation as a Forecasting Tool 107 Forecasting Demand in the Presence of Lost Sales 108 2.13 Linking Forecasting and Inventory Management 110 Snapshot Application: Predicting Economic Recessions 111 2.14 Historical Notes and Additional Topics 112 2.15 Summary 113 Additional Problems on Forecasting 113 Appendix 2–A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2–B Derivation of the Equations for the Slope and Intercept for Regression Analysis 120 Appendix 2–C Glossary of Notation for Chapter 2 122 Bibliography 122		Winters's Method for Seasonal Problems 84				
 2.10 Box-Jenkins Models 89 Estimating the Autocorrelation Function 90 The Autoregressive Process 93 The Moving-Average Process 94 Mixtures: ARMA Models 96 ARIMA Models 96 Using ARIMA Models for Forecasting 98 Summary of the Steps Required for Building ARIMA Models 99 Case Study: Using Box-Jenkins Methodology to Predict Monthly International Airline Passenger Totals 100 Snapshot Application: A Simple ARIMA Model Predicts the Performance of the U.S. Economy 104 Box-Jenkins Modeling—A Critique 104 Problems for Section 2.10 104 2.11 Practical Considerations 105 Model Identification and Monitoring 105 Simple versus Complex Time Series Methods 106 2.12 Overview of Advanced Topics in Forecasting 107 Simulation as a Forecasting Tool 107 Forecasting Demand in the Presence of Lost Sales 108 2.13 Linking Forecasting and Inventory Management 110 Snapshot Application: Predicting Economic Recessions 111 2.14 Historical Notes and Additional Topics 112 2.15 Summary 113 Additional Problems on Forecasting 113 Appendix 2–A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2–B Derivation of the Equations for the Slope and Intercept for Regression Analysis 120 Appendix 2–C Glossary of Notation for Chapter 2 122 Bibliography 122 		More Problems for Section 2.9 89				
Estimating the Autocorrelation Function 90 The Autoregressive Process 93 The Moving-Average Process 94 Mixtures: ARMA Models 96 ARIMA Models 96 Using ARIMA Models for Forecasting 98 Summary of the Steps Required for Building ARIMA Models 99 Case Study: Using Box-Jenkins Methodology to Predict Monthly International Airline Passenger Totals 100 Snapshot Application: A Simple ARIMA Model Predicts the Performance of the U.S. Economy 104 Box-Jenkins Modeling—A Critique 104 Problems for Section 2.10 104 2.11 Practical Considerations 105 Model Identification and Monitoring 105 Simple versus Complex Time Series Methods 106 2.12 Overview of Advanced Topics in Forecasting 107 Simulation as a Forecasting Tool 107 Forecasting Demand in the Presence of Lost Sales 108 2.13 Linking Forecasting and Inventory Management 110 Snapshot Application: Predicting Economic Recessions 111 2.14 Historical Notes and Additional Topics 112 2.15 Summary 113 Additional Problems on Forecasting 113 Appendix 2–A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2–B Derivation of the Equations for the Slope and Intercept for Regression Analysis 120 Appendix 2–C Glossary of Notation for Chapter 2 122 Bibliography 122	2.10	Box-Jenkins Models 89				
 The Autoregressive Process 93 The Moving-Average Process 94 Mixtures: ARMA Models 96 ARIMA Models 96 Using ARIMA Models for Forecasting 98 Summary of the Steps Required for Building ARIMA Models 99 Case Study: Using Box-Jenkins Methodology to Predict Monthly International Airline Passenger Totals 100 Snapshot Application: A Simple ARIMA Model Predicts the Performance of the U.S. Economy 104 Box-Jenkins Modeling—A Critique 104 Problems for Section 2.10 104 2.11 Practical Considerations 105 Model Identification and Monitoring 105 Simple versus Complex Time Series Methods 106 2.12 Overview of Advanced Topics in Forecasting 107 Simulation as a Forecasting Tool 107 Forecasting Demand in the Presence of Lost Sales 108 2.13 Linking Forecasting and Inventory Management 110 Snapshot Application: Predicting Economic Recessions 111 2.14 Historical Notes and Additional Topics 112 2.15 Summary 113 Additional Problems on Forecasting 113 Appendix 2–A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2–B Derivation of the Equations for the Slope and Intercept for Regression Analysis 120 Appendix 2–C Glossary of Notation for Chapter 2 122 Bibliography 122 		Estimating the Autocorrelation Function 90				
 The Moving-Average Process 94 Mixtures: ARMA Models 96 ARIMA Models 96 Using ARIMA Models for Forecasting 98 Summary of the Steps Required for Building ARIMA Models 99 Case Study: Using Box-Jenkins Methodology to Predict Monthly International Airline Passenger Totals 100 Snapshot Application: A Simple ARIMA Model Predicts the Performance of the U.S. Economy 104 Box-Jenkins Modeling—A Critique 104 Problems for Section 2.10 104 2.11 Practical Considerations 105 Model Identification and Monitoring 105 Simple versus Complex Time Series Methods 106 2.12 Overview of Advanced Topics in Forecasting 107 Simulation as a Forecasting Tool 107 Forecasting Demand in the Presence of Lost Sales 108 2.13 Linking Forecasting and Inventory Management 110 Snapshot Application: Predicting Economic Recessions 111 2.14 Historical Notes and Additional Topics 112 2.15 Summary 113 Additional Problems on Forecasting 113 Appendix 2–A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2–B Derivation of the Equations for the Slope and Intercept for Regression Analysis 120 Appendix 2–C Glossary of Notation for Chapter 2 122 Bibliography 122 		The Autoregressive Process 93				
 Mixtures: ARMA Models 96 ARIMA Models 96 Using ARIMA Models for Forecasting 98 Summary of the Steps Required for Building ARIMA Models 99 Case Study: Using Box-Jenkins Methodology to Predict Monthly International Airline Passenger Totals 100 Snapshot Application: A Simple ARIMA Model Predicts the Performance of the U.S. Economy 104 Box-Jenkins Modeling—A Critique 104 Problems for Section 2.10 104 2.11 Practical Considerations 105 Model Identification and Monitoring 105 Simple versus Complex Time Series Methods 106 2.12 Overview of Advanced Topics in Forecasting 107 Simulation as a Forecasting Tool 107 Forecasting Demand in the Presence of Lost Sales 108 2.13 Linking Forecasting and Inventory Management 110 Snapshot Application: Predicting Economic Recessions 111 2.14 Historical Notes and Additional Topics 112 2.15 Summary 113 Additional Problems on Forecasting 113 Appendix 2–A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2–B Derivation of the Equations for the Slope and Intercept for Regression Analysis 120 Appendix 2–C Glossary of Notation for Chapter 2 122 Bibliography 122 		The Moving-Average Process 94				
 ARIMA Models 96 Using ARIMA Models for Forecasting 98 Summary of the Steps Required for Building ARIMA Models 99 Case Study: Using Box-Jenkins Methodology to Predict Monthly International Airline Passenger Totals 100 Snapshot Application: A Simple ARIMA Model Predicts the Performance of the U.S. Economy 104 Box-Jenkins Modeling—A Critique 104 Problems for Section 2.10 104 2.11 Practical Considerations 105 Model Identification and Monitoring 105 Simple versus Complex Time Series Methods 106 2.12 Overview of Advanced Topics in Forecasting 107 Simulation as a Forecasting Tool 107 Forecasting Demand in the Presence of Lost Sales 108 2.13 Linking Forecasting and Inventory Management 110 Snapshot Application: Predicting Economic Recessions 111 2.14 Historical Notes and Additional Topics 112 2.15 Summary 113 Additional Problems on Forecasting 113 Appendix 2–A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2–B Derivation of the Equations for the Slope and Intercept for Regression Analysis 120 Appendix 2–C Glossary of Notation for Chapter 2 122 Bibliography 122 		Mixtures: ARMA Models 96				
Using ARIMA Models for Forecasting 98 Summary of the Steps Required for Building ARIMA Models 99 Case Study: Using Box-Jenkins Methodology to Predict Monthly International Airline Passenger Totals 100 Snapshot Application: A Simple ARIMA Model Predicts the Performance of the U.S. Economy 104 Box-Jenkins Modeling—A Critique 104 Problems for Section 2.10 104 2.11 Practical Considerations 105 Model Identification and Monitoring 105 Simple versus Complex Time Series Methods 106 2.12 Overview of Advanced Topics in Forecasting 107 Simulation as a Forecasting Tool 107 Forecasting Demand in the Presence of Lost Sales 108 2.13 Linking Forecasting and Inventory Management 110 Snapshot Application: Predicting Economic Recessions 111 2.14 Historical Notes and Additional Topics 112 2.15 Summary 113 Additional Problems on Forecasting 113 Appendix 2–A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2–B Derivation of the Equations for the Slope and Intercept for Regression Analysis 120 Appendix 2–C Glossary of Notation for Chapter 2 122 Bibliography 122		ARIMA Models 96				
Summary of the Steps Required for Building ARIMA Models 99 Case Study: Using Box-Jenkins Methodology to Predict Monthly International Airline Passenger Totals 100 Snapshot Application: A Simple ARIMA Model Predicts the Performance of the U.S. Economy 104 Box-Jenkins Modeling—A Critique 104 Problems for Section 2.10 104 2.11 Practical Considerations 105 Model Identification and Monitoring 105 Simple versus Complex Time Series Methods 106 2.12 Overview of Advanced Topics in Forecasting 107 Simulation as a Forecasting Tool 107 Forecasting Demand in the Presence of Lost Sales 108 2.13 Linking Forecasting and Inventory Management 110 Snapshot Application: Predicting Economic Recessions 111 2.14 Historical Notes and Additional Topics 112 2.15 Summary 113 Additional Problems on Forecasting 113 Appendix 2–A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2–B Derivation of the Equations for the Slope and Intercept for Regression Analysis 120 Appendix 2–C Glossary of Notation for Chapter 2 122 Bibliography 122		Using ARIMA Models for Forecasting 98				
ARIMA Models 99 Case Study: Using Box-Jenkins Methodology to Predict Monthly International Airline Passenger Totals 100 Snapshot Application: A Simple ARIMA Model Predicts the Performance of the U.S. Economy 104 Box-Jenkins Modeling—A Critique 104 Problems for Section 2.10 104 2.11 Practical Considerations 105 Model Identification and Monitoring 105 Simple versus Complex Time Series Methods 106 2.12 Overview of Advanced Topics in Forecasting 107 Simulation as a Forecasting Tool 107 Forecasting Demand in the Presence of Lost Sales 108 2.13 Linking Forecasting and Inventory Management 110 Snapshot Application: Predicting Economic Recessions 111 2.14 Historical Notes and Additional Topics 112 2.15 Summary 113 Additional Problems on Forecasting 113 Appendix 2–A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2–B Derivation of the Equations for the Slope and Intercept for Regression Analysis 120 Appendix 2–C Glossary of Notation for Chapter 2 122 Bibliography 122		Summary of the Steps Required for Building				
Case Study: Using Box-Jenkins Methodology to Predict Monthly International Airline Passenger Totals 100 Snapshot Application: A Simple ARIMA Model Predicts the Performance of the U.S. Economy 104 Box-Jenkins Modeling—A Critique 104 Problems for Section 2.10 104 2.11 Practical Considerations 105 Model Identification and Monitoring 105 Simple versus Complex Time Series Methods 106 2.12 Overview of Advanced Topics in Forecasting 107 Simulation as a Forecasting Tool 107 Forecasting Demand in the Presence of Lost Sales 108 2.13 Linking Forecasting and Inventory Management 110 Snapshot Application: Predicting Economic Recessions 111 2.14 Historical Notes and Additional Topics 112 2.15 Summary 113 Additional Problems on Forecasting 113 Appendix 2–A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2–B Derivation of the Equations for the Slope and Intercept for Regression Analysis 120 Appendix 2–C Glossary of Notation for Chapter 2 122 Bibliography 122		ARIMA Models 99				
 Predict Monthly International Airline Passenger Totals 100 Snapshot Application: A Simple ARIMA Model Predicts the Performance of the U.S. Economy 104 Box-Jenkins Modeling—A Critique 104 Problems for Section 2.10 104 2.11 Practical Considerations 105 Model Identification and Monitoring 105 Simple versus Complex Time Series Methods 106 2.12 Overview of Advanced Topics in Forecasting 107 Simulation as a Forecasting Tool 107 Forecasting Demand in the Presence of Lost Sales 108 2.13 Linking Forecasting and Inventory Management 110 Snapshot Application: Predicting Economic Recessions 111 2.14 Historical Notes and Additional Topics 112 2.15 Summary 113 Additional Problems on Forecasting 113 Appendix 2–A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2–B Derivation of the Equations for the Slope and Intercept for Regression Analysis 120 Appendix 2–C Glossary of Notation for Chapter 2 122 Bibliography 122 		Case Study: Using Box-Jenkins Methodology to				
 Passenger Totals 100 Snapshot Application: A Simple ARIMA Model Predicts the Performance of the U.S. Economy 104 Box-Jenkins Modeling—A Critique 104 Problems for Section 2.10 104 2.11 Practical Considerations 105 Model Identification and Monitoring 105 Simple versus Complex Time Series Methods 106 2.12 Overview of Advanced Topics in Forecasting 107 Simulation as a Forecasting Tool 107 Forecasting Demand in the Presence of Lost Sales 108 2.13 Linking Forecasting and Inventory Management 110 Snapshot Application: Predicting Economic Recessions 111 2.14 Historical Notes and Additional Topics 112 2.15 Summary 113 Additional Problems on Forecasting 113 Appendix 2–A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2–B Derivation of the Equations for the Slope and Intercept for Regression Analysis 120 Appendix 2–C Glossary of Notation for Chapter 2 122 Bibliography 122 		Predict Monthly International Airline				
 Snapshot Application: A Simple ARIMA Model Predicts the Performance of the U.S. Economy 104 Box-Jenkins Modeling—A Critique 104 Problems for Section 2.10 104 2.11 Practical Considerations 105 Model Identification and Monitoring 105 Simple versus Complex Time Series Methods 106 2.12 Overview of Advanced Topics in Forecasting 107 Simulation as a Forecasting Tool 107 Forecasting Demand in the Presence of Lost Sales 108 2.13 Linking Forecasting and Inventory Management 110 Snapshot Application: Predicting Economic Recessions 111 2.14 Historical Notes and Additional Topics 112 2.15 Summary 113 Additional Problems on Forecasting 113 Appendix 2–A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2–B Derivation of the Equations for the Slope and Intercept for Regression Analysis 120 Appendix 2–C Glossary of Notation for Chapter 2 122 Bibliography 122 		Passenger Totals 100				
 Predicts the Performance of the U.S. Economy 104 Box-Jenkins Modeling—A Critique 104 Problems for Section 2.10 104 2.11 Practical Considerations 105 Model Identification and Monitoring 105 Simple versus Complex Time Series Methods 106 2.12 Overview of Advanced Topics in Forecasting 107 Simulation as a Forecasting Tool 107 Forecasting Demand in the Presence of Lost Sales 108 2.13 Linking Forecasting and Inventory Management 110 Snapshot Application: Predicting Economic Recessions 111 2.14 Historical Notes and Additional Topics 112 2.15 Summary 113 Additional Problems on Forecasting 113 Appendix 2–A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2–B Derivation of the Equations for the Slope and Intercept for Regression Analysis 120 Appendix 2–C Glossary of Notation for Chapter 2 122 Bibliography 122 		Snapshot Application: A Simple ARIMA Model				
U.S. Economy 104 Box-Jenkins Modeling—A Critique 104 Problems for Section 2.10 104 2.11 Practical Considerations 105 Model Identification and Monitoring 105 Simple versus Complex Time Series Methods 106 2.12 Overview of Advanced Topics in Forecasting 107 Simulation as a Forecasting Tool 107 Forecasting Demand in the Presence of Lost Sales 108 2.13 Linking Forecasting and Inventory Management 110 Snapshot Application: Predicting Economic Recessions 111 2.14 Historical Notes and Additional Topics 112 2.15 Summary 113 Additional Problems on Forecasting 113 Appendix 2–A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2–B Derivation of the Equations for the Slope and Intercept for Regression Analysis 120 Appendix 2–C Glossary of Notation for Chapter 2 122 Bibliography 122		Predicts the Performance of the				
Box-Jenkins Modeling—A Critique 104 Problems for Section 2.10 104 2.11 Practical Considerations 105 Model Identification and Monitoring 105 Simple versus Complex Time Series Methods 106 2.12 Overview of Advanced Topics in Forecasting 107 Simulation as a Forecasting Tool 107 Forecasting Demand in the Presence of Lost Sales 108 2.13 Linking Forecasting and Inventory Management 110 Snapshot Application: Predicting Economic Recessions 111 2.14 Historical Notes and Additional Topics 112 2.15 Summary 113 Additional Problems on Forecasting 113 Appendix 2–A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2–B Derivation of the Equations for the Slope and Intercept for Regression Analysis 120 Appendix 2–C Glossary of Notation for Chapter 2 122 Bibliography 122		U.S. Economy 104				
 Problems for Section 2.10 104 2.11 Practical Considerations 105 Model Identification and Monitoring 105 Simple versus Complex Time Series Methods 106 2.12 Overview of Advanced Topics in Forecasting 107 Simulation as a Forecasting Tool 107 Forecasting Demand in the Presence of Lost Sales 108 2.13 Linking Forecasting and Inventory Management 110 Snapshot Application: Predicting Economic Recessions 111 2.14 Historical Notes and Additional Topics 112 2.15 Summary 113 Additional Problems on Forecasting 113 Appendix 2–A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2–B Derivation of the Equations for the Slope and Intercept for Regression Analysis 120 Appendix 2–C Glossary of Notation for Chapter 2 122 Bibliography 122 		Box-Jenkins Modeling—A Critique 104				
 2.11 Practical Considerations 105 Model Identification and Monitoring 105 Simple versus Complex Time Series Methods 106 2.12 Overview of Advanced Topics in Forecasting 107 Simulation as a Forecasting Tool 107 Forecasting Demand in the Presence of Lost Sales 108 2.13 Linking Forecasting and Inventory Management 110 Snapshot Application: Predicting Economic Recessions 111 2.14 Historical Notes and Additional Topics 112 2.15 Summary 113 Additional Problems on Forecasting 113 Appendix 2-A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2-B Derivation of the Equations for the Slope and Intercept for Regression Analysis 120 Appendix 2-C Glossary of Notation for Chapter 2 122 Bibliography 122 		Problems for Section 2.10 104				
Model Identification and Monitoring 105 Simple versus Complex Time Series Methods 106 2.12 Overview of Advanced Topics in Forecasting 107 Simulation as a Forecasting Tool 107 Forecasting Demand in the Presence of Lost Sales 108 2.13 Linking Forecasting and Inventory Management 110 Snapshot Application: Predicting Economic Recessions 111 2.14 Historical Notes and Additional Topics 112 2.15 Summary 113 Additional Problems on Forecasting 113 Appendix 2–A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2–B Derivation of the Equations for the Slope and Intercept for Regression Analysis 120 Appendix 2–C Glossary of Notation for Chapter 2 122 Bibliography 122	2.11	Practical Considerations 105				
Simple versus Complex Time Series Methods 106 2.12 Overview of Advanced Topics in Forecasting 107 Simulation as a Forecasting Tool 107 Forecasting Demand in the Presence of Lost Sales 108 2.13 Linking Forecasting and Inventory Management 110 Snapshot Application: Predicting Economic Recessions 111 2.14 Historical Notes and Additional Topics 112 2.15 Summary 113 Additional Problems on Forecasting 113 Appendix 2–A Forecast Errors for Moving Averages and Exponential Smoothing 118 Appendix 2–B Derivation of the Equations for the Slope and Intercept for Regression Analysis 120 Appendix 2–C Glossary of Notation for Chapter 2 122 Bibliography 122		Model Identification and Monitoring 105

Chapter 3 Aggregate Planning 124

Chapter Overview 124 3.1 Aggregate Units of Production 127 Overview of the Aggregate Planning 3.2 Problem 128 3.3 Costs in Aggregate Planning 130 Problems for Sections 3.1–3.3 132 3.4 A Prototype Problem 133 Evaluation of a Chase Strategy (Zero Inventory Plan) 135 Evaluation of the Constant Workforce Plan 136 Mixed Strategies and Additional Constraints 138 Problems for Section 3.4 139 3.5 Solution of Aggregate Planning Problems by Linear Programming 141 Cost Parameters and Given Information 141 Problem Variables 142 Problem Constraints 142 Rounding the Variables 143 Extensions 144 Other Solution Methods 146 3.6 Solving Aggregate Planning Problems by Linear Programming: An Example 147 Problems for Sections 3.5 and 3.6 149 3.7 The Linear Decision Rule 152 3.8 Modeling Management Behavior 153 Problems for Sections 3.7 and 3.8 155 3.9 Disaggregating Aggregate Plans 155 Snapshot Application: Welch's Uses Aggregate Planning for Production Scheduling 157 Problems for Section 3.9 158 **3.10** Production Planning on a Global Scale 158 3.11 Practical Considerations 159 3.12 Historical Notes 160 3.13 Summary 161 Additional Problems on Aggregate Planning 162 Appendix 3–A Glossary of Notation for Chapter 3 167 **Bibliography** 168 Supplement 1 Linear Programming 169 **S1.1** Introduction 169

- **S1.2** A Prototype Linear Programming Problem 169
- **\$1.3** Statement of the General Problem 171 Definitions of Commonly Used Terms 172 Features of Linear Programs 173

\$1.4 Solving Linear Programming Problems Graphically 174 Graphing Linear Inequalities 174 Graphing the Feasible Region 176 Finding the Optimal Solution 177 Identifying the Optimal Solution Directly by Graphical Means 179 **\$1.5** The Simplex Method: An Overview 180 **\$1.6** Solving Linear Programming Problems with Excel 181 Entering Large Problems Efficiently 185 **\$1.7** Interpreting the Sensitivity Report 187 Shadow Prices 187 Objective Function Coefficients and Right-Hand Sides 188 Adding a New Variable 188 Using Sensitivity Analysis 189 **\$1.8** Recognizing Special Problems 191 Unbounded Solutions 191 Empty Feasible Region 192 Degeneracy 194 Multiple Optimal Solutions 194 Redundant Constraints 194 **\$1.9** The Application of Linear Programming

to Production and Operations Analysis 195 Bibliography 197

Chapter 4

Inventory Control Subject to Known Demand 198

Chapter Overview 198

- Types of Inventories 201 4.1 4.2 Motivation for Holding Inventories 202 4.3 Characteristics of Inventory Systems 203 4.4 Relevant Costs 204 Holding Cost 204 Order Cost 206 Penalty Cost 207 Problems for Sections 4.1–4.4 208 4.5 The EOQ Model 210 The Basic Model 210 Inclusion of Order Lead Time 213 Sensitivity 214 EOQ and JIT 215 Problems for Section 4.5 216 4.6 Extension to a Finite Production Rate 218 Problems for Section 4.6 219 4.7
- **4.7** Quantity Discount Models 220 Optimal Policy for All-Units Discount Schedule 221

- Summary of the Solution Technique for All-Units Discounts 223 Incremental Quantity Discounts 223 Summary of the Solution Technique for Incremental Discounts 225 Other Discount Schedules 225 Problems for Section 4.7 226
- ***4.8** Resource-Constrained Multiple Product Systems 227 *Problems for Section 4.8 230*
- **4.9** EOQ Models for Production Planning 230 Problems for Section 4.9 234
- 4.10 Power-of-Two Policies 235
- **4.11** Historical Notes and Additional Topics 237 Snapshot Application: Mervyn's Recognized for State-of-the-Art Inventory Control System 238
- **4.12** Summary 239 Additional Problems on Deterministic Inventory Models 240

Appendix 4–A Mathematical Derivations for Multiproduct Constrained EOQ Systems 244
Appendix 4–B Glossary of Notation for Chapter 4 246
Bibliography 246

Chapter 5 Inventory Control Subject to Uncertain

Demand 248

- Chapter Overview 248 Overview of Models Treated in This Chapter 252
- 5.1 The Nature of Randomness 253
- **5.2** Optimization Criterion 255 Problems for Sections 5.1 and 5.2 256

5.3 The Newsboy Model 257 Notation 257 Development of the Cost Function 258 Determining the Optimal Policy 259 Optimal Policy for Discrete Demand 261 Extension to Include Starting Inventory 261 Snapshot Application: Using Inventory Models to Manage the Seed-Corn Supply Chain at Syngenta 262 Extension to Multiple Planning Periods 263 Problems for Section 5.3 264 5.4 Lot Size-Reorder Point Systems 266 Describing Demand 267 Decision Variables 267

Derivation of the Expected Cost Function 267 The Cost Function 269 Inventory Level versus Inventory Position 271 5.5 Service Levels in (Q, R) Systems 272 Type 1 Service 272 Type 2 Service 273 Optimal (Q, R) Policies Subject to Type 2 Constraint 274 Imputed Shortage Cost 275 Scaling of Lead Time Demand 276 Estimating Sigma When Inventory Control and Forecasting Are Linked 276 *Lead Time Variability 277 Calculations in Excel 278 Negative Safety Stock 278 Problems for Sections 5.4 and 5.5 279 5.6 Additional Discussion of Periodic-Review Systems 281 (s, S) Policies 281 *Service Levels in Periodic-Review Systems 281 Problems for Section 5.6 282 Snapshot Application: Tropicana Uses Sophisticated Modeling for Inventory Management 283 5.7 Multiproduct Systems 283 ABC Analysis 283 Exchange Curves 285 Problems for Section 5.7 288 ***5.8** Overview of Advanced Topics 289 Multi-echelon Systems 289 Perishable Inventory Problems 290 Snapshot Application: Triad's Inventory Systems Meet Markets' Needs 291 5.9 Historical Notes and Additional Readings 292 **5.10** Summary 293 Additional Problems on Stochastic Inventory Models 294 Appendix 5–A Notational Conventions and Probability Review 300 Appendix 5–B Additional Results and Extensions for the Newsboy Model 301 Appendix 5–C Derivation of the Optimal (O, R) Policy 304 Appendix 5–D Probability Distributions for **Inventory Management** 304 Appendix 5-E Glossary of Notation for Chapter 5 308 Bibliography 309

Chapter 6 Supply Chain Management 311

Chapter Overview 311 The Supply Chain as a Strategic Weapon 315 Snapshot Application: Wal-Mart Wins with Solid Supply Chain Management 316 6.1 The Transportation Problem 316 The Greedy Heuristic 319 6.2 Solving Transportation Problems with Linear Programming 320 Generalizations of the Transportation 6.3 Problem 322 Infeasible Routes 323 Unbalanced Problems 323 6.4 More General Network Formulations 324 Problems for Sections 6.1–6.4 327 Snapshot Application: IBM Streamlines Its Supply Chain for Spare Parts Using Sophisticated Mathematical Models 328 6.5 Distribution Resource Planning 330 Problems for Section 6.5 332 6.6 **Determining Delivery Routes in** Supply Chains 332 Practical Issues in Vehicle Scheduling 336 Snapshot Application: Air Products Saves Big with Routing and Scheduling Optimizer 337 Problems for Section 6.6 337 6.7 Designing Products for Supply Chain Efficiency 338 Postponement in Supply Chains 339 Additional Issues in Supply Chain Design 340 Snapshot Application: Dell Computer Designs the Ultimate Supply Chain 342 Problems for Section 6.7 342 6.8 The Role of Information in the Supply Chain 343 The Bullwhip Effect 344 Snapshot Application: Saturn Emerges as an Industry Leader with Scientific Supply Chain Management 347 Electronic Commerce 347 Electronic Data Interchange 348 Web-Based Transactions Systems 349 **RFID** Technology Provides Faster Product Flow 350 Problems for Section 6.8 351 6.9 Multilevel Distribution Systems 351 Problems for Section 6.9 354

6.10 Designing the Supply Chain in a Global Environment 355

Snapshot Application: Norwegian Company
Implements Decision Support System to
Streamline Its Supply Chain 356Snapshot Application: Timken Battles Imports
with Bundling 358Supply Chain Management in a Global
Environment 359Snapshot Application: Digital Equipment
Corporation Uses Mathematical Modeling
to Plan Its Global Supply Chain 360
Trends in Offshore Outsourcing 360
Problems for Section 6.10 3616.11Summary 362

Chapter 7

Push and Pull Production Control Systems: MRP and JIT 364

Chapter Overview 364 MRP Basics 367 JIT Basics 369

7.1 The Explosion Calculus 370 Problems for Section 7.1 374

7.2 Alternative Lot-Sizing Schemes 376 EOQ Lot Sizing 376 The Silver–Meal Heuristic 377 Least Unit Cost 378 Part Period Balancing 379 Problems for Section 7.2 380

7.3 Incorporating Lot-Sizing Algorithms into the Explosion Calculus 382 *Problems for Section 7.3 383*

7.4 Lot Sizing with Capacity Constraints 384 Problems for Section 7.4 387

7.5 Shortcomings of MRP 388 Uncertainty 388 Capacity Planning 389 Rolling Horizons and System Nervousness 390 Additional Considerations 392 Snapshot Application: Raymond Corporation Builds World-Class Manufacturing with MRP II 393 Problems for Section 7.5 394

7.6 JIT Fundamentals 395 The Mechanics of Kanban 395 Single Minute Exchange of Dies 397 Advantages and Disadvantages of the Just-

in'-Time Philosophy 398

Implementation of JIT in the United States 401 Problems for Section 7.6 402

7.7 A Comparison of MRP and JIT 403

7.8 JIT or Lean Production? 404

- **7.9** Historical Notes 405
- 7.10 Summary 406 Additional Problems for Chapter 7 407

Appendix 7-A Optimal Lot Sizing for Time-Varying Demand 411

Appendix 7–B Glossary of Notation for Chapter 7 415

Bibliography 416

Chapter 8

Operations Scheduling 417

Chapter Overview 417

- **8.1** Production Scheduling and the Hierarchy of Production Decisions 420
- 8.2 Important Characteristics of Job Shop Scheduling Problems 422
 Objectives of Job Shop Management 422
- **8.3** Job Shop Scheduling Terminology 423
- 8.4 A Comparison of Specific Sequencing Rules 425

First-Come, First-Served425Shortest Processing Time426Earliest Due Date426Critical Ratio Scheduling427

8.5 Objectives in Job Shop Management: An Example 428 Problems for Sections 8.1–8.5 429

8.6 An Introduction to Sequencing Theory for a Single Machine 430 Shortest-Processing-Time Scheduling 431 Earliest-Due-Date Scheduling 432 Minimizing the Number of Tardy Jobs 432 Precedence Constraints: Lawler's Algorithm 433 Snapshot Application: Millions Saved with Scheduling System for Fractional Aircraft Operators 435 Problems for Section 8.6 435
8.7 Sequencing Algorithms for Multiple

- **3.7** Sequencing Algorithms for Multiple Machines 437 Scheduling n Jobs on Two Machines 438 Extension to Three Machines 439 The Two-Job Flow Shop Problem 441 Problems for Section 8.7 444
- **8.8** Stochastic Scheduling: Static Analysis 445 Single Machine 445 Multiple Machines 446

	The Two-Machine Flow Shop Case: 447
	Problems for Section 8.8 448
8.9	Stochastic Scheduling: Dynamic Analysis 449
	Selection Disciplines Independent of
	Job Processing Times 451
	Selection Disciplines Dependent on
	Job Processing Times 452
	The cµ Rule 454
	Problems for Section 8.9 454
8.10	Assembly Line Balancing 455
	Problems for Section 8.10 459
	Snapshot Application: Manufacturing
	Divisions Realize Savings with Scheduling
	Software 461
8.11	Simulation: A Valuable Scheduling Tool 462
8.12	Post-MRP Production Scheduling
	Software 463
8.13	Historical Notes 463
8.14	Summary 464
	Additional Problems on Scheduling 465

Reliability and Maintainability 700

Chapter Overview 700

- **12.1** Reliability of a Single Component 704 Introduction to Reliability Concepts 704 Preliminary Notation and Definitions 705 The Exponential Failure Law 707 Problems for Section 12.1 710
- 12.2 Increasing and Decreasing Failure Rates 712 Problems for Section 12.2 714 12.3 The Poisson Process in Reliability Modeling 715 Series Systems Subject to Purely Random Failures 718 Problems for Section 12.3 719 **12.4** Failures of Complex Equipment 720 Components in Series 720 Components in Parallel 721 Expected Value Calculations 721 K Out of N Systems 722 Problems for Section 12.4 724 12.5 Introduction to Maintenance Models 724 12.6 Deterministic Age Replacement Strategies 726 The Optimal Policy in the Basic Case 726 A General Age Replacement Model 728 Problems for Section 12.6 732 12.7 Planned Replacement under Uncertainty 732 Planned Replacement for a Single Item 732 Block Replacement for a Group of Items 736 Problems for Section 12.7 738 ***12.8** Analysis of Warranty Policies 740 The Free Replacement Warranty 740 The Pro Rata Warranty 742 Extensions and Criticisms 744 Problems for Section 12.8 744 **12.9** Software Reliability 745 Snapshot Application: Reliability-Centered Maintenance Improves Operations at Three Mile Island Nuclear Plant 746 **12.10** Historical Notes 747 **12.11** Summary 748 Additional Problems on Reliability and Maintainability 749 Appendix 12-A Glossary of Notation on Reliability and Maintainability 751 Bibliography 753
- Appendix: Tables 754
