

# Instrument- assisted soft tissue mobilization to the LOWER QUARTER

Allied Health Education

Robert McCabe, DPT, MTC, OCS, CSCS, FDN

---

---

---

---

---

---

---

---

## Provider Disclaimer

- Allied Health Education and the presenter of this webinar do not have any financial or other associations with the manufacturers of any products or suppliers of commercial services that may be discussed or displayed in this presentation.
- There was no commercial support for this presentation.
- The views expressed in this presentation are the views and opinions of the presenter.
- Participants must use discretion when using the information contained in this presentation.

---

---

---

---

---

---

---

---

## Fascia

### Old Definition

» Sheet or band of connective tissue that attaches to and separates skeletal muscles or internal organs

### New Definition

» 3 dimensional collagen matrix that is attached to all of the biological structures which assists the body systems to operate in an integrated manner

Zugel, BJSM, 2018

---

---

---

---

---

---

---

---

## Fascia Functions

- » **Mechanical Support** - chains, slings or lines
  - Local and Regional
  - *Impacts posture*
- » **Movement**
  - Detects, Transmits, and modifies forces
  - “Cellular crosstalk” among sensory receptors
- » **Visceral function**

Chaitow, 2012 , Lee & Lee 2013, Myers 2011

---

---

---

---

---

---

---

---

## Myofascial Links

### » Tensegrity-

Transfer of tension through network of mechanoreceptors

---

---

---

---

---

---

---

---

## FASCIAL CONNECTIONS

- |  |   |
|--|---|
| <ul style="list-style-type: none"> <li>• Deep fasciae</li> <li>• Superficial fasciae</li> <li>• Aponeurosis</li> <li>• Epineurium</li> <li>• Visceral fasciae</li> <li>• Endomysium</li> <li>• Tendons</li> <li>• Epimysium</li> </ul> | <ul style="list-style-type: none"> <li>• Joint Capsule</li> <li>• Meninges</li> <li>• Ligaments</li> <li>• Retinacula</li> <li>• Tendon</li> <li>• Intermuscular septa</li> <li>• Dermis</li> <li>• Perimysium</li> </ul> |
|--|---|

---

---

---

---

---

---

---

---

## Myofascial Links

---

---

---

---

---

---

---

## Fasciae

---

---

---

---

---

---

---

## Fascia

### Factors Affecting Mechanical Properties

- Fluid levels/ hydration
- Trauma ( injury / surgery)
- Disease ( ex: diabetes)
- Aging
- Activity level
- Nutrition

---

---

---

---

---

---

---

## Fascia Inflammation

### Acute

- **Necessary response** for tissue healing / regeneration
- Applic : Long-term use of NSAIDS may inhibit muscle growth

### Chronic

- **Excessive response**
- ↑ Fibrosis (collagen) ⇒
- Tethering/ compression of soft tissues ⇒ pain
- “Spillover” of inflammatory cytokines into bloodstream
- Central nociceptor stim.
- Fatty infiltration / mm atrophy (ex : Disc injury)
- Applic: ↓ Strength gains in elderly

---

---

---

---

---

---

---

---

## Fascia

### Effects of Excessive Fibrosis

- ↓ Tissue regeneration
- ↓ Muscle growth
- ↓ Neuromuscular performance
- Ex- Power generation
- ↑ Chronic MSK pain

---

---

---

---

---

---

---

---

## SUPERFICIAL BACK LINE

- ♦ Epicranial fascia
- ♦ Erector / sacrolumbar fascia
- ♦ Sacrotuberous ligament
- ♦ Hamstrings
- ♦ Gastrocnemius
- ♦ Achilles Tendon
- ♦ Plantar fascia

© Human Pictures 2001

PRIMA

---

---

---

---

---

---

---

---

## LATERAL LINE

- ♦ Splenius Capitis
- ♦ Sternocleidomastoid
- ♦ External/ internal intercostals
- ♦ Gluteus Maximus
- ♦ Tensor Fasciae
- ♦ Iliotibial tract
- ♦ Lateral compartment
- ♦ Peroneal muscles

© Primal Pictures 2001

PRIMAL

---

---

---

---

---

---

---

---

## SPIRAL LINE

- ♦ Splenius capitis /cervicis
- ♦ Rhomboid Major / Minor
- ♦ Serratus Anterior
- ♦ External/Internal Oblique
- ♦ TFL/ ITB
- ♦ Tibialis Anterior
- ♦ Biceps femoris
- ♦ Sacrotuberous Liagament
- ♦ Sacrolumb fascia/ Erector Spinae

© Primal Pictures 2001

PRIMAL

---

PRIMAL

---

---

---

---

---

---

---

---

## SUPERFICIAL FRONT LINE

- ♦ Sternocleidomastoid
- ♦ Rectus Abdominis
- ♦ Quadriceps Tendon
- ♦ Anterior Compartment
- ♦ Tibialis Anterior

© Primal Pictures 2004

---

---

---

---

---

---

---

---

## BACK FUNCTIONAL LINE

- ♦ Latissimus Dorsi
- ♦ Thoraco-lumbar Fascia
- ♦ Sacral Fascia
- ♦ Gluteus Maximus
- ♦ Vastus Lateralis
- ♦ Quadriceps Tendon

© Primal Pictures 2004

---

---

---

---

---

---

---

---

## Trigger Point

### Trigger Point vs. Fibrosis

- » **Fibrosis** - ▲ Muscle hardness
  - ♦ Collagen deposition / chemical  $\Delta$ 's
- » **Trigger Point** - ▲ Muscle hardness
  - ♦ Symptomatic
  - ♦ Pressure elicits symptoms

---

---

---

---

---

---

---

---

# Fibrosis

---

---

---

---

---

---

---

## Instrument-Assisted Soft Tissue Mobilizations

### ♦ IASTM

---

---

---

---

---

---

---

## Fascia

### Biological Effects of IASTM / STM

- ↑ Arterial perfusion
- ↑ Fascial sliding
- Neuromodulation
  - ♦ ↓ Pain
  - ♦ △ Muscle activity

- ↑ Reabsorption of fibrosis
- “ Break up” adhesions ?

---

---

---

---

---

---

---

## Fascia

### Patient Benefits of IASTM /STM

- Prevent overuse/ chronic - induced fibrosis
- ↑ Recovery from muscle soreness
- ↑ Short-term flexibility
- May ↓ Chronic musculoskeletal pain

---

---

---

---

---

---

---

## Fascia

### Clinician Benefits of IASTM /STM

- ↓ Stress on hands
  - ♦ CMC joint
- ↑ Barrier
- ↑ Specificity of targeted tissue

---

---

---

---

---

---

---

## Indications

- » Trigger points/ MFP
- » Chronic tendinopathies
- » Adhesions / fibrosis /excessive scar
- » Neuromuscular imbalances
- » Scapula Dyskinesis
- » Postural Dysfunction
- » *Ligament sprains (i.e. UCL)*
- » *Nerve entrapments (CTS, TOS)*

Movement  
Disorder

---

---

---

---

---

---

---

## Absolute Contraindications

- » Inflammatory or infectious skin conditions
  - Psoriasis, dermatitis, eczema, cellulitis, shingles, Athlete's foot, foot- mouth disease
- » Impaired skin integrity
  - ♦ Open Wound / non- closed wound margins
- » Directly over surgical incision
  - ♦ Fibroblastic stage 0-12 weeks
- » Directly over ecchymosis/effusion
- » Directly over acutely traumatized tissue
- » Directly over unstable fractures
- » Hematoma/ myositis ossificans
- » Osteomyelitis
- » Blood thinning MEDS

---

---

---

---

---

---

---

---

## Relative Contraindications

- » Varicose veins
- » Cancer
- » Body art
- » CRPS
- » Polyneuropathies
- » Unhealed, closed non- complicated fractures
- » Autoimmune disorders
- » Diabetes

---

---

---

---

---

---

---

---

## Relative Contraindications

- » Rheumatoid arthritis
- » Ankylosing spondylitis
- » Adjacent to pacemakers, insulin pumps
- » Post- injection ( i.e. PRP )
- » Lymphedema
- » Central sensitization / hypersensitivity

---

---

---

---

---

---

---

---

## Tissue Prep

- Massage cream
- Moisturizing lotion  
Ex : Albolene <sup>TM</sup>
- Ultrasound gel

---

---

---

---

---

---

---

---

## Tool Cleaning

### Medical Grade Disinfectant / Cleaner

- ☞ After every use !
  - ♦ MRSA

Ex : Protex<sup>TM</sup>

---

---

---

---

---

---

---

---

## LEVELS OF EVIDENCE

### ♦ Individual Studies

I	Evidence obtained from high-quality diagnostic studies, prospective studies, or randomized controlled trials
II	Evidence obtained from lesser-quality diagnostic studies, prospective studies, or randomized controlled trials (eg, weaker diagnostic criteria and reference standards, improper randomization, no blinding, less than 80% follow-up)
III	Case-controlled studies or retrospective studies
IV	Case series
V	Expert opinion

KELLEY MJ. JOSPT, 2013: 43(5)

---

---

---

---

---

---

---

---

## GRADES OF EVIDENCE

### ♦ Synthesis of studies ► ► ► Recommendations

KELLEY MJ. JOSPT, 2013: 43(5)

GRADES OF RECOMMENDATION BASED ON		STRENGTH OF EVIDENCE
A	Strong evidence	A preponderance of level I and/or level II studies support the recommendation. This must include at least 1 level I study
B	Moderate evidence	A single high-quality randomized controlled trial or a preponderance of level II studies support the recommendation
C	Weak evidence	A single level II study or a preponderance of level III and IV studies, including statements of consensus by content experts, support the recommendation
D	Conflicting evidence	Higher-quality studies conducted on this topic disagree with respect to their conclusions. The recommendation is based on these conflicting studies
E	Theoretical/foundational evidence	A preponderance of evidence from animal or cadaver studies, from conceptual models/principles, or from basic science/bench research supports this conclusion
F	Expert opinion	Best practice based on the clinical experience of the guidelines development team

---

---

---

---

---

---

---

---

## Research

- » Several case reports /case series
- » Some basic science studies
- » Recent RCT's & Systematic Reviews

☞ **Protocols/ approaches based on Level 5 evidence (expert opinion)**

---

---

---

---

---

---

---

---

## Research

- **Nielsen 07'** - ↑ in surface circulation ↓ pain locally and distal.
- **Lambert, M. Phys. Ther. Reviews. 2017**
  - **Systematic review**
  - Significant short-term ( < 3 mos.) ↓ in pain and/or ↑ ROM vs. control and/ or other tx. groups
- **Moon, JH. J. Phys Ther Sci.**
  - **RCT**
  - IASTM superior to static hamstring stretches on immediate hamstring flexibility on pts. w non-specific LBP

---

---

---

---

---

---

---

---

## Research

- **Gulick, D. J. Bodyworks & Movement Ther. 2017** -
  - **RCT** – 3 groups of pts w UT trigger points
    - IASTM – 3 techniques applied 6x over 3 weeks
    - ↑ UT PPT in all 3 groups
- **Miller, S - JOSPT 2018**
  - **RCT** – 3 groups of pts w UT trigger points
  - IASTM vs. static stretching vs. self STM (Theracane)
  - Significantly greater improvements in cervical ROM and PPT in IASTM group

---

---

---

---

---

---

---

## Research

### Increase career longevity

- 68 % of PT experience thumb pain.
- Of these, 25% will retire or change professions
- Based on 1102 Australian Physiotherapists

McMahon- Australian J of PT '06'

---

---

---

---

---

---

---

## IASTM

### ♦ Tool Selection

- **Buffalo Horn**
- **Jade Stone**
- **Stainless Steel**

---

---

---

---

---

---

---

## ♦ IASTM TOOLS

---

---

---

---

---

---

---

## IASTM Principles / Parameters

- Scanning vs. mobilizing tissue
- Clinician technique
- Tissue depth of application
- Frequency
- Duration
- Treatment objective
- Tissue Reactivity
- Treatment Sequence

---

---

---

---

---

---

---

## IASTM Principles / Parameters

- » Scanning = Assessing the tissue
  - ♦ Parallel to muscle/ Both directions
  - ♦ Superficial ↔ Deep
  - ♦ Assess for resistance
    - "Bump" - Trigger point
    - Grainy or gritty feel- Fascial
- » Treatment
  - ♦ Multiple angles
  - ♦ Superficial ↔ Deep

---

---

---

---

---

---

---

## IASTM Principles / Parameters

### » Clinician Technique

- ♦ Two hand technique
  - Tissue is on slack ➔ Deep effect
- ♦ One hand technique
  - Take up soft tissue slack with non-instrument hand ➔ Superficial effect
- ♦ Application angle : 30° to 60°

---

---

---

---

---

---

---

## IASTM Principles / Parameters

### » Tissue Depth = Pressure

Variables affecting tissue depth

- A. Degree of tissue tension / slack
- B. Degree of force
- C. Angle of application
  - ♦ ↑ Angle ➔ Deeper effect
- B. Tool surface
  - ♦ Concave vs. convex
  - ♦ Large vs. small surface
  - ♦ Sharp vs. dull surface area
    - ❖ More Superficial effect

---

---

---

---

---

---

---

## Tool Features

### Superficial ( Fasciae)

Larger surface area  
Sharp/ thinner edges  
Concave edges

### Deep Structures ( Muscle)

Smaller surface area  
Dull/ thicker edges  
Convex edges

---

---

---

---

---

---

---

## IASTM Principles / Parameters

### » Frequency

- ♦ 2-3 x's / week ( 2- 3 days in between)

### » Duration

- ♦ Per session: 8-10 min
- ♦ Per structure / muscle : 3-10 minutes
  - Knee MCL - 2 min
  - ITB - 8-10 min
  - PIGH shoulder capsule - 4 to 5 min

---

---

---

---

---

---

---

## IASTM Principles / Parameters

### » Treatment objective

- ♦ ↓ Pain / edema (Acute)
  - Non- aggressive
- ♦ ↑ ROM / Disrupt fibrotic tissue
  - **More** aggressive
  - Ecchymosis is normal
  - STOP if petechiae is produced
  - Bruising is not necessary

### » Tissue Reactivity

- Must adjust parameters !

---

---

---

---

---

---

---

---

---

---

---

---

---

---

## IASTM Principles / Parameters

### » Treatment Sequence

#### Pre - Treatment : Warm Up Tissue

- ♦ Active ( i.e. UBE, Bike, Elliptical or T- Mill )
- ♦ Passive ( Modalities- Heat, lazer US, Paraffin)

#### » Post – Treatment

- ♦ Therex. / Neuromuscular re-education
- ♦ Soft tissue / joint mobilizations
- ♦ Cryotherapy
  - ❑ Not indicated if goal is to incite an inflammatory response ( i.e. tendinopathy or ligament sprain)

## Mobilization Techniques

### STROKES

#### 1. Sweep - Basic stroke

- ♦ Tool edge- 30-60° angle to body surface

#### 2. J - Stroke

- ♦ Pencil grip
- ♦ Tool edge- 30-60° angle

#### 3. Strum

- ♦ Deep stroke
- ♦ Tool edge- 60-90° angle

## Mobilization Techniques

### STROKES

#### 4. Scoop

- ♦ Tool edge - 90° angle
- ♦ Deep tissue

#### 5. Brushing/ Framing

- ♦ Light/ De- sensitizing strokes
- ♦ Bony prominences ( ex: scapula, patella)

#### 6. Fanning

- ♦ Hold one end of tool stationary
- ♦ Move other end- fan like pattern

## BASIC TECHNIQUES

---

---

---

---

---

---

## Lower Trapezius

### » Common indications

- ♦ Promote LT muscle activation
- ♦ Scapula dyskinesis
- ♦ LT trigger point
- ♦ Subacromial/ coracoid impingement
- ♦ Forward shoulder posture

---

---

---

---

---

---

## Lower Trapezius

• Video

---

---

---

---

---

---

## Latissimus Dorsi

### » Common indications

- ♦ ↓ Shoulder ROM
  - ☛ ↓ Abduction > flexion
- ♦ Forward shoulder posture
- ♦ Post high intensity training
  - ☛ Ex: Deadlifts, Crossfit
- ♦ Lat Dorsi trigger point

PIGH – Posterior- Inferior Glenohumeral

---

---

---

---

---

---

---

## Latissimus Dorsi

### • Video

---

---

---

---

---

---

---

## Thoraco-Lumbar

### » Structures

- ♦ Thoraco-lumbar fasciae
- ♦ Erector Spinae
- ♦ Superficial back fascial line
- ♦ Back functional fascial line

---

---

---

---

---

---

---

## Thoraco-Lumbar

### » Common indications

- ♦ ↓ T-L Spine ROM
  - ☞ ↓ Flexion > lateral flexion / rotation
- ♦ Low Back Pain
- ♦ Post high intensity training
  - ☞ Ex: Deadlifts, Crossfit
- ♦ TL trigger point

PIGH – Posterior- Inferior Glenohumeral

---

---

---

---

---

---

---

## Thoraco-Lumbar 1

### • Video

---

---

---

---

---

---

---

## Iliac Crest

### » Common indications

- ♦ Lumbosacral pain
- ♦ Lumbar instability
- ♦ Iliac crest pain

### » Structures

- ♦ Iliolumbar ligament
- ♦ Lumbar multifidus
- ♦ Lateral fascial line

---

---

---

---

---

---

---

## Iliac Crest

- Video

---

---

---

---

---

---

---

## Quadratus Lumborum

- » Common indications
  - ♦ Weak/ tight QL
  - ♦ Lumbo- pelvic ( core) instability
  - ♦ Hip flexor tightness
- » Structures
  - ♦ Iliolumbar ligament
  - ♦ Lumbar multifidus
  - ♦ Lateral fascial line

---

---

---

---

---

---

---

## Quadratus Lumborum

- VIDEO

---

---

---

---

---

---

---

## Gluteal Medius Tendon & Post. ITB

### » Structures

- ♦ ITB-Hamstring fascial connection
- ♦ Gluteus medius/ minimus tendons
- ♦ Lateral fascial line / Back functional line

### » Common indications

- ♦ Gluteal medius/ minimus tendinopathy
- ♦ Hamstring tightness
- ♦ Trochanteric bursitis
- ♦ ITB syndrome
- ♦ Sciatic nerve restrictions

---

---

---

---

---

---

---

---

## Gluteal Medius Tendon & Posterior ITB

### · VIDEO

---

---

---

---

---

---

---

---

## ITB - Vastus Lateralis Junction

### » Structures

- ♦ ITB- VL fascial connection
- ♦ VL / ITB
- ♦ Spiral Fascial Line

### » Common indications

- ♦ VL/ TFL trigger points
- ♦ Quadriceps (VL) tightness
- ♦ Iliopsoas tightness
- ♦ ITB Syndrome
- ♦ Post high intensity training
  - ☞ Ex: Squats, Crossfit

---

---

---

---

---

---

---

---

## ITB- Vastus Lateralis Junction 1

### •VIDEO

---

---

---

---

---

---

---

## ITB- Vastus Lateralis Junction -2

### •VIDEO

---

---

---

---

---

---

---

## Hip Adductors

### » Structures

- ♦ Adductor longus, magnus and brevis
- ♦ Gracilis
- ♦ Pectineus

### » Common indications

- ♦ Adductor strains (post- acute phase)
- ♦ Adductor weakness/ tightness
- ♦ Iliopsoas tightness
- ♦ Core instability

---

---

---

---

---

---

---

## Hip Adductors

• VIDEO

---

---

---

---

---

---

---

## Anterior Thigh- Quadriceps

### » Structures

- ♦ Quadriceps
- ♦ Superficial front fascial line
- ♦ Spiral Fascial Line

### » Common indications

- ♦ Quadriceps trigger points
- ♦ Quadriceps/ iliopsoas tightness
- ♦ Femoral nerve entrapment /restrictions
- ♦ Patellofemoral pain synrome
- ♦ Post high intensity training
  - ☞ Ex: Squats, Crossfit

---

---

---

---

---

---

---

## Anterior Thigh 1

• VIDEO

---

---

---

---

---

---

---

## Quadriceps Tendon

### » Structures

- ♦ Quadriceps tendon /quadriceps muscle
- ♦ Back functional line

### » Common indications

- ♦ Quadriceps tendinopathy

---

---

---

---

---

---

---

## Quadriceps Tendon

### •VIDEO

---

---

---

---

---

---

---

## Lat. Retinaculum. Distal ITB

### » Structures

- ♦ ITB/ lateral retinaculum
- ♦ Quadriceps
- ♦ Superficial front fascial line
- ♦ Lateral fascial line
- ♦ Spiral fascial line
- ♦ Back functional fascial line

### » Common indications

- ♦ ITB friction syndrome
- ♦ Anterior knee pain/ PFP
- ♦ Peroneal tendinopathy

---

---

---

---

---

---

---

### **Lateral Retinaculum/ Distal ITB**

• VIDEO

---

---

---

---

---

---

---

---

### **Lateral Retinaculum/ Distal ITB/ Patella Tendon**

• VIDEO

---

---

---

---

---

---

---

## Patella Tendon

### » Structures

- ♦ Patella tendon
- ♦ Anterior tibialis

### » Common indications

- ♦ Patella tendinopathy
- ♦ Anterior /medial tibial stress syndrome

---

---

---

---

---

---

---

## Patella Tendon

### • VIDEO

---

---

---

---

---

---

---

## Medial Knee

### » Structures

- ♦ MCL
- ♦ Medial retinaculum

### » Common indications

- ♦ MCL Sprain
- ♦ Non-specific medial knee pain

---

---

---

---

---

---

---

## Medial Knee

### • VIDEO

---

---

---

---

---

---

---

## Posterior Knee

### » Structures

- ♦ Posterior knee capsule
- ♦ Gastrocnemius
- ♦ Hamstring
- ♦ Superficial back functional line

### » Common indications

- ♦ ↓ Knee Extension ROM
- ♦ Hamstring / gastrocnemius tightness
- ♦ ↓ Knee joint swelling

---

---

---

---

---

---

---

## Posterior Knee

### • VIDEO

---

---

---

---

---

---

---

## Lateral Compartment

### » Structures

- ♦ Peroneal muscles
- ♦ Lateral fascial line

### » Common indications

- ♦ Peroneal tendinopathy
- ♦ ITB friction syndrome
- ♦ Lateral plantar nerve entrapment
- ♦ Peroneal nerve entrapment/ restrictions

---

---

---

---

---

---

---

## Lateral Compartment

### • VIDEO

---

---

---

---

---

---

---

## Posterior Lower Leg

### » Structures

- ♦ Superficial back line
- ♦ Gastroc-soleus muscles

### » Common indications

- ♦ Achilles tendinopathy
- ♦ Plantar fascitis
- ♦ ↓ Ankle ROM (DF)

---

---

---

---

---

---

---

## Posterior Lower Leg

### •VIDEO

---

---

---

---

---

---

---

## Anterior Lower Leg- Ankle

### » Structures

- ♦ Superficial front line
- ♦ Anterior compartment
- ♦ Ankle retinaculum

### » Common indications

- ♦ Anterior ankle impingement
- ♦ Anterior/ Medial Tibial Stress Syndromes
- ♦ ↓ Ankle ROM (PF)

---

---

---

---

---

---

---

## Anterior Lower Leg - Ankle

### •VIDEO

---

---

---

---

---

---

---

## Lateral Ankle

### » Structures

- ♦ Lateral ankle ligaments (ATFL)
- ♦ Lateral retinaculum
- ♦ Lateral fascial line
- ♦ Peroneal tendons

### » Common Indications

- ♦ Peroneal tendinopathy
- ♦ Ankle sprains (post –acute phase)
- ♦ ↓ Ankle AROM (Inversion)

---

---

---

---

---

---

---

## Lateral Ankle

### • VIDEO

---

---

---

---

---

---

---

### » Structures

- ♦ Lateral ankle ligaments (ATFL)
- ♦ Lateral retinaculum
- ♦ Lateral fascial line
- ♦ Peroneal tendons

### » Common Indications

- ♦ Peroneal tendinopathy
- ♦ Ankle sprains (post –acute phase)
- ♦ ↓ Ankle AROM (Inversion)

---

## Re - Assessment

### Importance

- » Effectiveness of treatment ?
- » Increase patient "buy in"

### What to Re-Assess

- » **Concordant / comparable sign-** The familiar chief complaint (pain or other symptom) that is produced by a movement , position or accessory joint motion
- Objective asterisk - Clinical exam
- Functional asterisk - Clinical exam
- Subjective asterisk - Reported by patient

## CASE STUDY

- Michelle is a 45 year-old dental assistant
- Recreational athlete/runner
- Runs 3X / week – 2 miles

### Current Complaints

#### Reason for seeking treatment

- » **Chief complaint: R > L Lumbar/ QL pain (P1)**
  - Provoked with work tasks ( standing/ leaning forward)
- » **Secondary complaint: ↓ Trunk flexion (P2)**
  - Limited by tightness/ discomfort (P1 location)
- » **Tertiary c/o "tightness" in R > L hips (P3)**
  - Difficult crossing legs to put socks on
  - No c/o tingling/ numbness or weakness in LE's

## INITIAL EVALUATION

### Observation/ Inspection –Key Findings

- » Slouched posture
- » Lower right shoulder
- » Increased lumbar lordosis
  - ♦ ↑ Anterior pelvic tilt
- » Genu Valgus
- » ↑ Pronation

---

---

---

---

---

---

---

## INITIAL EVALUATION

### Functional Tests

- » **Functional Asterisks**
  - Active trunk flexion- **P1**
- » Sitting /Crossing Leg (Hip ER)
  - Reproduced **P1**
- » Deep Squat (FMS) **I**
  - Excessive trunk flexion
  - Reproduced **P1**

---

---

---

---

---

---

---

## Objective Findings

- **Special tests**
  - (-) SLR
  - + Thomas/ Modified Thomas test
  - + FABER ( R )
  - + Hamstring tightness
  - (-) Gower's sign
  - (-) Prone lumbar instability test
- **Palpation**
  - (+) Tenderness / soft tissue hardness / “ guarding” at R>L lumbar paraspinals
  - Trigger pain referral pattern with deep pressure to (R ) G.Medius and right lumbar paraspinals

---

---

---

---

---

---

---

## Objective Findings

### ➤ AROM/ PROM

- ↓ Hip ER (R > L)
- ↓ Hip Extension
- ↓ Ankle DF

### ➤ Muscle Strength

- ↓ Hip Abduction (R > L)

### ➤ Normal neurological screening to LE

•

## Hypothesis / Impairment list

### » Diagnosis

- Non-Specific LBP / Postural dysfunction
- Negative findings for lumbar instability ( EBP)
- Negative findings for sciatica/ radiculopathy

### » Key Impairments

- ↓ Lumbar AROM
- ↓ Hip AROM (R)
- Poor posture
- Hip /core weakness

## IASTM Treatment

### » R QL / Bilateral lumbar paraspinals

- Re-assess functional asterisk (P1)= Trunk Flex

### » Glut. medius/ ITB

- Re-assess functional asterisk / (P2) = Crossing leg

### » Quadriceps/ iliopsoas / gastrocnemius= Squat

- Re-assess functional asterisk / (P3)

- Other interventions : Hip/Core strengthening  
Hip / Lumbar mobilizations  
Postural Restoration Exercises

## Course Completion

You have completed the course

Instrument – Assisted Soft Tissue  
Mobilizations to the Upper Quarter

THANK YOU.
