Rising Above Economic Woes

As design firms in the public sector scramble in stagnant markets, the private sector is showing signs it may be ready to take off by Gary J. Tulacz

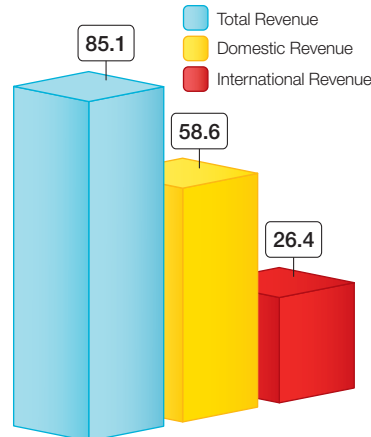

2011-2012 at a Glance

After four years, it appears the U.S. construction market has bottomed out and is beginning the slow climb out of recession. For many large U.S. design firms, this development is cause for both relief and celebration. But for other design firms, particularly in the public infrastructure markets, uncertainty about the future remains a constant.

The signs of the recession's end can be seen in ENR's Top 500 Design Firms list. The Top 500, taken as a group, had overall design revenue of \$85.06 billion in 2011, up 6.6%, from \$79.82 billion in 2010. This marks the first time in three years the Top 500 experienced revenue growth for the year.

On the domestic side, the picture is not as rosy. The Top 500 did see a gain in revenue from projects in the U.S., but the gain was only 1.6%, to \$58.62 billion in 2011 from \$57.87 billion in 2010. This is a far cry from the record \$68.14 billion in domestic design revenue generated in 2008. The international market showed it is a growing destination for the Top 500 as revenue from projects outside the U.S. rose 20.4% in 2011 to \$26.44 billion.

Among domestic market sectors, there was a clear line between traditionally public-sector markets and those associated with the private sector. The largest domestic public infrastructure market was transportation, which fell 0.1%, to \$13.01 billion in 2011. Also

"We used to be just a service provider, but we now are more willing to invest in projects."

Mike Della Rocca, Chief Executive, North America Operations, AECOM

down were water (down 3.7%), sewer and wastewater (down 8.3%) and hazardous waste (down 6.1%).

Domestic markets that are traditionally in the private sector or a mix of private and public work all rose. The biggest domestic market gainer was industrial process, which rose 24.0%, followed closely by telecommunications (up 23.3%). Manufacturing was up 9.7%, domestic petroleum design revenue was up 4.6% and the power market rose 4.0%. Even the beleaguered U.S. buildings design market rose 2.9% in 2011.

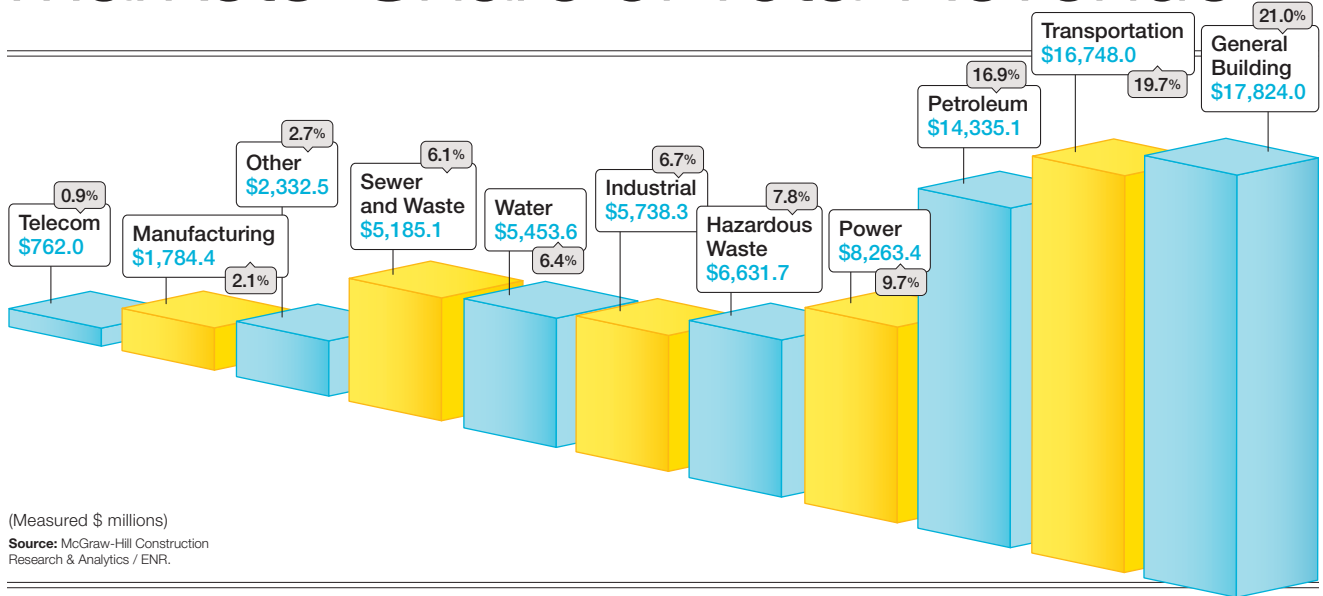

There were 458 design firms on this year's Top 500 that also sent in surveys last year. Of that number, 288 enjoyed a rise in revenue from 2010 to 2011, while 168 had lower revenue. Two firms reported little or no change.

Buildings Show Signs of Life

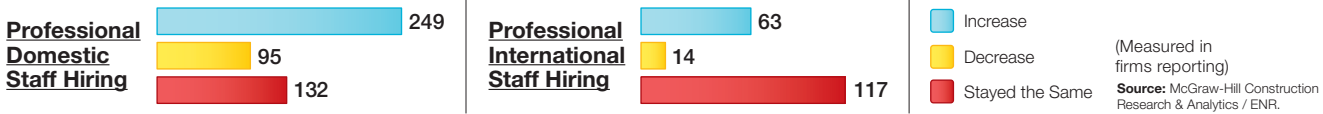

The general buildings market is the largest design market, but it continues to be stagnant, although some firms say there are signs of life. "We are doing a lot of research facilities for the federal government and universities," says George Little, CEO of HDR. He says that university endowments were hit by the global financial market meltdown of 2008, but they now are bouncing back, freeing up funds for new projects.

The federal market, on the other hand, is struggling over budgetary issues. "The federal government is in-

vesting in optimizing existing space and not in major new capital programs,” says Carl Roehling, CEO of SmithGroupJJR. “Public architecture was more of a cushion than a savior,” says Steve McConnell, a managing partner at NBBJ. The private sector will bring the buildings market out of the doldrums, he says.

There are some bright spots. “While most regions remain slow, the corridor from Washington, D.C., to Boston has become steadily busier,” says Brad Perkins, CEO of Perkins Eastman. He says that even housing—primarily multifamily rentals—are moving forward. “Clients such as hospitals and universities who had shelved projects early in the recession have decided that they cannot wait any longer and have restarted their building programs,” he says.

McConnell says architects must be able to focus on the value proposition. “In this post-recession market, architects must understand that every dollar deployed in a design must have a return of some sort,” he says.

Engineers are also facing owner demands for value. “Owners are looking at return on investment that demands performance as opposed to ‘nice to have,’” says Tony Litton, CEO of Sebesta Blomberg. In light of this demand, engineers must understand the business advice they provide, he says.

McConnell also says that green building is becoming part of the overall design process, but architects

must be able to calibrate the cost-benefit equation and show energy efficiencies when employing sustainable design elements.

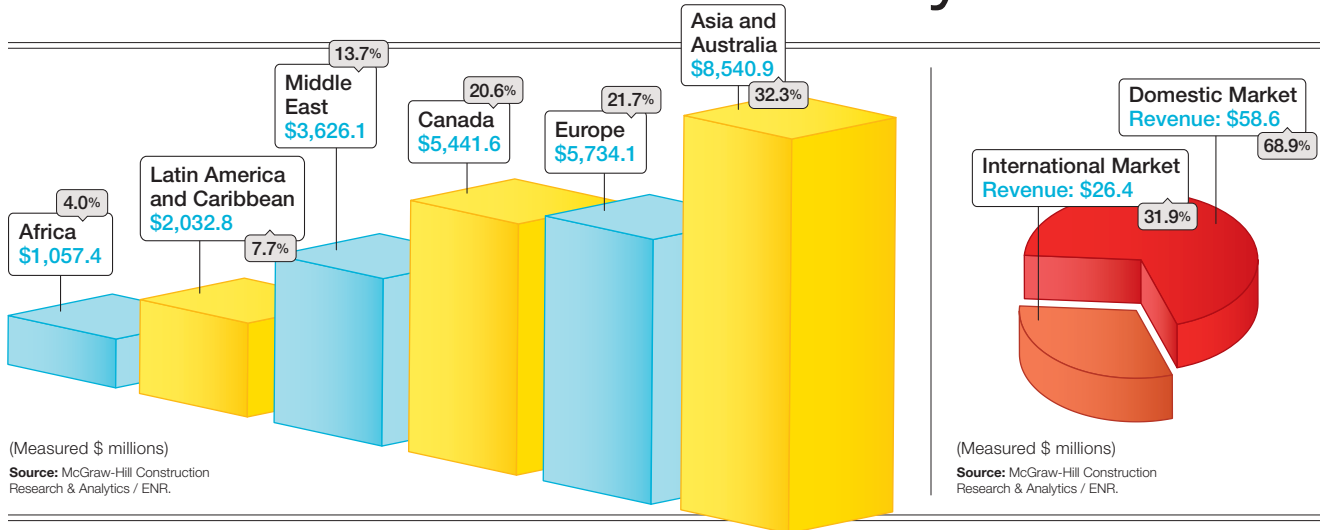

Roehling agrees that sustainability is now a growing part of the design process, rather than simply a bolt-on afterthought. “However, people now are demanding proof of benefits,” he says. While many models can show energy efficiencies in a design, “these models are based on a lot of assumptions,” Roehling notes. He cautions firms not to make promises about how much a design will save or when a design will pay for itself.

Energizing the Market

AECOM is finding an expanding market on the private-sector side, says Mike Della Rocca, chief executive of North American operations for AECOM. He says the firm has a strong interest in what he calls “extraction” markets: oil and gas and mining. “We have a pretty deep bench in the oil and gas sector,” he says. The power market is picking up, particularly in the transmission and distribution area, he says, adding, “Utilities are making billion-dollar investments in upgrading the grid.”

The industrial-process and petroleum market has been growing and promises to remain strong. “Our business was up 20% last year, and our industrial work was up 30%,” says Bob Giorgio, president of global

International Market Analysis

engineering and technology for CDI Corp.

The resurgence in the industrial market has helped firms across the board. "While there is much talk still about the recession, we have seen a major influx of project work over the past 12 to 18 months," says David J. Blaida, Matrix Technologies vice president. He says clients that have been holding on to a large amount of capital now are spending quickly on their facilities and processes.

This pressure to build now is counter to industry's experience of past election years. "What we have seen in an election year is that owners hit the 'pause' button, and projects tend to be pulled back pending the outcome of the election," says Gregory DiFrank, president, River Consulting. Now, even in industries that have been severely impacted over the past few years, industrial owners are beginning to release money for project design.

"During the first quarter of 2012, our U.S. commercial revenue was up 25% year-on-year, driven by work from projects supporting industry, manufacturing, mining, and other Fortune 500 clients," says Dan Batrack, CEO of Tetra Tech. This is the third consecutive quarter of 25% growth in the commercial/industrial sector for the company, he says.

However, this surge in market activity comes with a price. "These companies are investing part of the capital reserves they have built over the past couple of years. As a result, these owners are looking at very aggressive time-to-market schedules," says Kevin C. Bean, CEO of O'Neal. He says much of the work is not in green-field projects but in efficiency upgrades and in the redeployment of existing capacity.

Another reason for the increase in industrial and

"There are some courageous people on the state and local level that are not willing to wait for federal funding before pushing forward on major projects."

George Pierson,
CEO, Parsons
Brinckerhoff

manufacturing work is that foreign manufacturers believe that now is a good time to build in the U.S. "We are seeing a significant amount of foreign direct investment," says Bean. The current U.S. economic conditions are attractive for manufacturing companies looking to make capital investments here, he says.

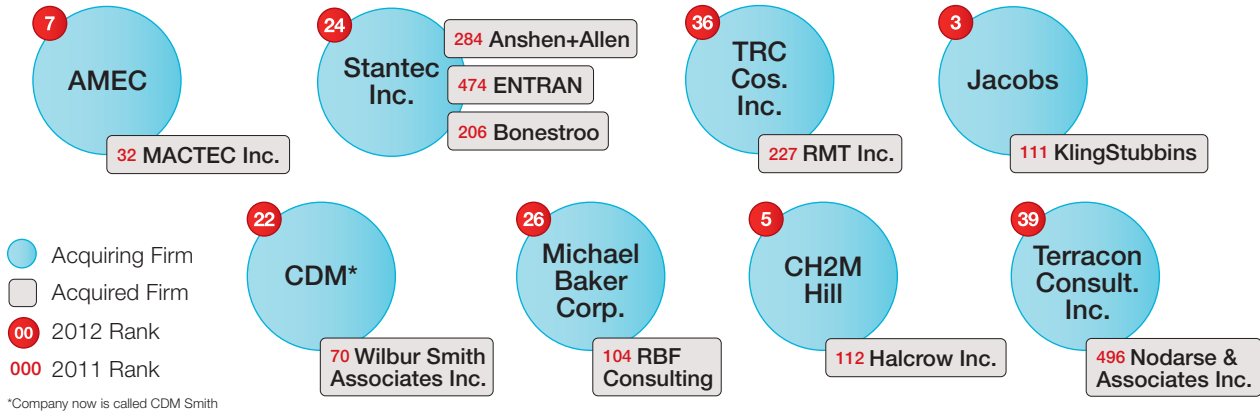

Many firms are excited about the potential boom in shale gas using hydraulic fracturing. "The energy market clearly is the driving force in the overall uptick in business," says Chris Vincze, CEO of TRC Cos. He notes that the shale-gas fields around the country are at an early stage of development: Environmental issues will have to be assessed and worked out, storage and transmission facilities will have to be built, and the infrastructure will have to be hardened. "This is a great opportunity for us," says Vincze.

The fracking boom is giving firms with the right experience a boost. RETTEW Associates was the fastest-growing firm on the Top 500 this year, thanks to its work on the Marcellus shale formation in Pennsylvania (see p. 53). "Anything related to fracking is taking off," says Giorgio. He says that, once extraction from these shale formations begins in earnest, there will be a need for new storage and refining capacity.

The domestic power market is beginning to settle after a few years of regulatory uncertainty. "Over the last several years, we've seen a growing interest in combined-cycle natural-gas units, principally driven by the low price of natural gas in the United States, as well as the development of the shale-gas market," says Jeff Merrifield, senior vice president in the power division at The Shaw Group.

The nuclear power market also is stirring despite concerns over last year's nuclear disaster in Fukushima,

Who Bought Whom

Japan. "We are incredibly excited about the Nuclear Regulatory Commission's decision in early February of this year to approve the combined operating license for Southern's Plant Vogtle [Units] 3 and 4 in Georgia and, in late March, the approval of the combined operating license for V.C. Summer [Units] 2 and 3 in South Carolina," says Merrifield. These approvals will allow Shaw to move quickly toward full nuclear construction at these sites, he says.

On the other hand, coal has taken a series of body blows in the past few months. The U.S. Environmental Protection Agency's proposal that would require new powerplants to cut carbon emissions by 50% will virtually halt the construction of new coal-fired plants. "There is the major shift to natural gas as a generation fuel. The drivers are the long-term prognosis for the lower cost of gas and the effects of the new EPA air emissions and water regulations," says Dean Oskvig, CEO of Black & Veatch's energy group.

Oskvig says Black & Veatch works closely with owners to navigate the regulations governing energy issues. "We take a more systems approach to clients, rather than focusing on construction," he says. The firm has hired new people with more consulting and enterprise-planning expertise to provide clients with long-term planning of capacity issues, Oskvig says.

Vincze is concerned about the EPA regulations' affect on the electric utilities. "The EPA is slamming the coal industry. About 30% to 40% of coal plants could be shut down," he says. While Vincze concedes the regs could generate work by forcing utilities to build new powerplants and decommission old plants, he sees the EPA compliance timelines as being overly aggressive. "We can't have a regulatory environment

Market Success | By Gary Tulacz

RETTEW Seizes Opportunity

Work in Pennsylvania's Marcellus shale-gas formation provided the spark that propelled RETTEW Associates Inc. (**No. 166**) into becoming the fastest-growing firm on this year's Top 500. RETTEW's core markets had been in the transportation and water and wastewater markets, says Mark Lauriello, RETTEW president. "We also did some oil and gas work, mostly in pipelines."

When the major energy companies began to invest in the Marcellus formation, the firm acted quickly. "We were lucky to have some people with a background in that market," Lauriello says. Energy companies needed experts with industry experience as well as relationships with local and state permitting agencies. RETTEW,

which had been executing small jobs since 2008, fit the bill, he says.

This work led to more and larger jobs, such as helping to design hydrofracking pads. RETTEW tripled in size in two years and grew to 425 employees from 170. But this has not caused many growing pains. Because of the recession, there were many experienced people available. "They were able to hit the ground running without the usual hand-holding you get with new hires," Lauriello says.

Lauriello expects RETTEW's growth to slow down to a "mere" 30% this year. In the meantime, the firm is starting to hire again in the public infrastructure fields. "Those markets are slow, but we're preparing now for when they take off again," Lauriello says. ■

that ignores the market or that pays more attention to counting molecules than developing an energy policy.”

The alternate-energy market has hit a stumbling block. “Alternative energy lost a major driver when the major tax credit provisions in the tax code expired,” says Vincze. He says TRC is working on permitting transmission and distribution from major wind farms in the Southwest. But he fears alternate energy may not be able to compete with traditional energy sources without further federal or state incentives. “Now all that is left to help alternate-energy programs is accelerated depreciation provisions in the tax code,” he says.

Traffic Jam

If there is an overriding issue among designers in the transportation sector, it is the lack of a federal funding bill. “That is the one thing we are focused on. Everything else seems to pale beside this issue,” says Paul Yarossi, HNTB Holdings Ltd. president. “The deficit concerns us all, but there seems to be an inability in Washington to see investments that bring a return to the economy—and that is what investing in our infrastructure does,” he says.

Many firms in the market are resigned to a lack of a funding bill. “I doubt that there will be a funding bill before the presidential election in November,” says

“We can’t have a regulatory environment that ignores the market or that pays more attention to counting molecules than to developing an energy policy.”

Chris Vincze, CEO, TRC Cos.

George Pierson, CEO of Parsons Brinckerhoff. “The closer we get to the election, the less of a chance we have for a bill,” he observes.

But many firms say a federal transportation bill is not a panacea. State and local budgetary shortfalls may hurt the chances of major projects in many states. “Even with a federal bill, I do not see how the market can rebound without significant contributions on the state and local end,” says George Little, CEO of HDR. He is not optimistic about a funding bill passing this year. “It is very political out there,” he notes.

Pierson says there are some major transportation projects on the boards that are being pushed ahead despite the hesitancy in Congress to pass a major funding bill. “There are some courageous people on the state and local level that are not willing to wait for federal funding,” he says. He cites as examples New York Gov. Andrew Cuomo (D) supporting the Tappan Zee Bridge replacement and California Gov. Gerry Brown (D) pushing for a high-speed-rail line. PB is the lead program manager on the California project.

Parsons also is seeing some stirring in the transportation market, despite the federal funding gridlock. “In the transportation [sector], we’ve been seeing chronic procurement schedule slippage over the past few years. We’re now beginning to get a sense that procurement

schedules are starting to firm up,” says Gary Adams, executive vice president at Parsons.

State and local budget shortfalls also are taking their toll on the water, sewer and wastewater markets. “Most of the work in the water and wastewater markets is being driven by regulatory compliance,” says Little. He says major new work will be slow until the housing market recovers and the demand for new connections increases. “The housing market is the tail that wags the dog in these markets.”

Some firms believe the water and wastewater markets are beginning a slow recovery from the recession. “Many clients had stopped all their capital projects because they had no idea where the bottom of the recession was,” says B. Narayanan, CEO of Carollo Engineers. “Now, it looks like they have better-adapted to the new financial reality, and many have begun to slowly release selected projects and programs.” However, he says most growth-related work is “dead.”

For many large design firms working in the public sector, finding financing for their clients is becoming an issue. More firms are taking a financial interest in the projects they are pursuing, says Della Rocca of AECOM. He says AECOM is participating in more than 100 projects in which there is some sort of alternative financing or project-delivery arrangement. “We

“If you treat design as a commodity, it will be managed as a commodity, without regard to value-added capabilities of the top problem-solvers.”

Bob Giorgio, President, Global Engineering and Technology, CDI Corp.

used to be just a service provider, but we now are more willing to invest in projects,” he says. “We are moving forward in strengthening our ability to participate in financing projects.”

Not everyone sees public-private partnerships increasing at a meaningful pace. “There is a lot of talk about P3s, but I don’t see many new ones on the street,” says Yarossi. He says that, culturally, the U.S. is not used to private financing of public infrastructure. “It is going to take a while for public agencies to get used to the idea,” he says.

Delivery Process Changes

Project delivery has been a hot topic for design firms for many years, but they are seeing alternate project delivery ramping up—which has caused many design firms to refocus their processes. “We are finding our role as architects to be shifting away from a linear design-bid-build process and more toward integrating the general contractors and subcontractors to the front of the process,” says Sylvia Botero, senior vice president of RBB Architects. She says this collaboration can result in a faster and more cost-efficient delivery.

However, many design firms find it can be difficult to compete in the design-build market. It is often up to the design partner on the design-build team to do

most of the preparation for the presentation to the client. “The need for economy and speed to market continues to drive the owner’s increasing use of design-build or construction management-at-risk with integrated fast-track delivery,” says Robert Burke, principal at PageSoutherlandPage. He says this arrangement has burdened the design profession with more costs to pursue projects, while it also loads the front-end costs on the design firm.

Much has been made of integrated project delivery, in which all parties share a project’s risk and rewards under a unified contract. However, IPDs do not seem to be growing as rapidly as everyone expected. “It seems now that some problems have popped up in IPD projects, people are beginning to understand that they do not always work,” says Roehling. He says IPDs are valuable, but they are not right for every project.

Where Have All Those Firms Gone?

There continues to be a consolidation among major design firms. Eleven design firms that made the 2011 Top 500 were acquired this past year, while 12 from the 2010 Top 500 were acquired the year before.

Many large design firms believe consolidation will continue apace. “The level of consolidation in the industry was fairly strong in 2011, and this strength has

“In this post-recession market, architects must understand that every dollar deployed in a design must have a return of some sort.”

Steve McConnell, Managing Partner, NBBJ

continued in the first half of 2012,” says Della Rocca of AECOM, one of the biggest consolidators in the industry. However, he cautions that AECOM also is growing internally, apart from acquisitions. “We are especially interested in organic growth,” he says.

Oskvig of Black & Veatch says the firm is interested in acquiring talent, but not just to get bigger. “There will be acquisitions for scope and skill, rather than scale. In this industry, an acquisition to simply make a bigger version of your company very seldom creates value,” he says.

Many firms are concerned about the influx of international company buying U.S. designers. Firms from Australia, such as Cardno and GHD, and from Canada, such as Stantec and exp, are making their presence felt in the domestic market. Vincze says that Cardno acquired two firms that TRC was interested in. “Some of these international firms have an advantage in bidding on U.S. firms because their currencies now are stronger relative to the dollar,” he says.

Consolidation has caused concern among midsize firms. “There is an increasing bifurcation in the profession between the large corporate firms and boutique firms,” says Roehling of SmithGroupJJR. “There is increasing pressure on firms toward design-build-finance-operate programs, so a lot of design firms are

beginning to position themselves to work on these types of delivery systems,” he says.

Consolidation has left many midsize firms wondering how they will be affected. “Consolidation in our industry the last few years has been mind-boggling,” says John Kissinger, CEO of GRAEF. He says his firm is studying what its place will be in the future. “We feel our size gives us a certain nimbleness, but clearly all of this consolidation has changed the industry dynamics.”

Help Wanted (Some Travel Required)

The biggest boost in design revenue for the Top 500 was in the international market. Design firms from across the spectrum are eyeing international work and expanding abroad. For example, Wunderlich-Malec Engineering Inc., a midsize industrial and power engineer working primarily in the U.S. market, has opened an office in Saudi Arabia, aligned with an agent in Asia and is looking to expand into South America, according to Neal Wunderlich, president. “This past year we have seen significant international opportunity,” he says.

Wunderlich-Malec is just one example of designers looking abroad. “We embarked on an expansion outside of North America two years ago, focusing on India and the Gulf Cooperation Council countries,” says Oskvig. He says the firm already has a major presence in Southeast Asia’s booming energy markets. “We want to double the size of our firm by 2020, and most of that growth will come from international work.”

Technology | By Gary Tulacz

Overlaying Reality in the Office

Augmented reality is a technology that overlays new text and graphics onto a single live view, generally in real time, on a device’s viewfinder (ENR 4/9 p. 17).

BRPH Architects-Engineers Inc. (No. 309) has become one of the first design firms to test augmented reality as a design tool, says Cris Vigil, BRPH senior vice president. While specializing in complex facilities, BRPH was searching for a way to draw on the expertise of its various offices, he notes. How could the firm best take advantage of building information modeling in a collaborative environment across its five offices?

BRPH uses augmented reality in videoconferences and design charrettes. The augmented-reality program projects a BIM image onto a small whiteboard during the live projection of a videoconference, according to Vigil. As the presenter moves or rotates the whiteboard, the BIM model moves or rotates in parallel. The model can zoom in or out as members of the design team and various offices examine the different design elements.

“This allows us to coordinate the design in three dimensions, instead of two. Collaboration is much faster and more dynamic,” Vigil says. ■

cause of a merger, but to help better penetrate the international market. “JJR has been our landscaping/master-planning subsidiary for 40 years,” says Roehling. While there is a large and growing international market for master planning, the firm had trouble marketing its two separate brands as many international clients did not understand they were dealing with one company with two different names. “We did not want to lose the JJR brand, so we simply added it to our name,” Roehling says.

Parsons Brinckerhoff has been in the international market for decades and now is assisting its new parent, Balfour Beatty, in expanding internationally. “Balfour Beatty has a huge presence in the U.K. and U.S., but

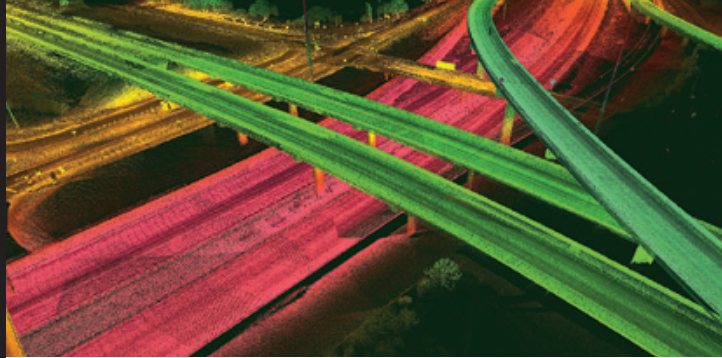

it is looking at other international markets,” says Pierson. “Our global platform helps us by marketing not just our own talents, but our ability to bring in Balfour Beatty’s own skill sets.”

Many design firms have been active in China and continue to flourish. “We have been in China for over 20 years and have about 50 people on the ground there,” says McConnell of NBBJ. One major NBBJ project in China is the 80,000-seat Hangzhou Stadium, which is part of the city of Hangzhou’s Sports Park. “We used [building information modeling] to determine the attributes of every one of the 80,000 seats to ensure full, unobstructed views for each seat,” he says.

Some design firms are amazed at the scale of some

Successful Strategy | By Gary Tulacz

Ramping Up Utility Work

The Texas transportation market was uncertain in 2007, and Samir "Sam" Hanna, president of Surveying & Mapping Inc. (No. 146), was worried. "Transportation work had always been the backbone of our business," he says. The firm had a choice if Texas DOT cut expenditures: cut jobs or find new markets.

"When times get tough, firms tend to cut costs and reduce staff. We chose to increase our marketing budget and focus on the utilities market," Hanna says.

Just as the DOT market began to slow down, electric utilities began to ramp up their budgets on transmission and distribution. SAM Inc.'s marketing efforts began to pay off.

The push toward alternative energy also provided a boost to the firm. "The Texas Public Utilities Commission awarded eight licenses for wind farms in north Texas, and we ended up working for seven of [them]," says Keith McNease, senior vice president. Texas also began to

see an upsurge in pipeline work, which the firm also is involved in.

These hot markets pushed the firm's revenue to \$72 million in 2011 from \$20 million in 2009. "We saw what was coming and prepared by investing in the company, rather than cutting back," says McNease.

SAM Inc. has invested heavily in high-tech surveying and mapping technologies, which is an advantage, McNease says. For example, the firm has the full capability to use LIDAR, an optical remote-sensing technology. A van equipped with LIDAR can collect full-terrain mapping data while traveling as fast as 35 mph.

"We can provide clients with a wide array of options, from traditional surveying crews to cutting-edge technologies," Hanna says.

Hanna remains optimistic. "We are not going to grow as fast as we have over the past couple of years, but there is plenty of work. The only limiting factor is having enough good people to do the work." ■

of the projects in China. "We are working on the master plan and conceptual design of what could end up the largest health-care project in the world: the Beijing International Medical Center," says HDR's Little. He says that the project, when competed, will consist of ten 1,000-bed hospitals.

However, Roehling cautions that fees on Chinese projects are not as high as many U.S. firms are used to. "The fees for a 1.5-million-sq-ft project might be less than you would get for a 400,000-sq-ft facility elsewhere," he says.

Brazil is one of the most tempting targets for international designers because it will be hosting the 2014

World Cup and 2016 Olympics and it has made major public investments in infrastructure and housing. However, many designers are wary. "Brazil holds great promise, but it is not an easy market to break into for non-Brazilian companies," says Pierson.

An area of concern on the international power side is water use. "Water is a finite resource, so we have begun designing plants that limit water use," says Os-kvig. For example, the firm is building the 4,800-MW coal-fired Kusile Power Station in South Africa. It uses air-cooled condensers, rather than cooling towers. "It uses 5% of the water that a normal plant of this size would use," he says. "As the world becomes more urbanized, there will be a greater demand for closed-loop systems that conserve natural resources like water."

The strong international market has drawn firms from around the world, not just from the U.S., that increasingly are competing in the global marketplace. "We've seen the emergence of strong competitors from Asia, particularly from Korea," says Giorgio. He is particularly concerned "because they have a greater appetite for risk than we have." CDI is meeting this challenge through alliances. "We recently formed an alliance with [Japan's] Toyo Engineering to work in the Asian polysilicone market," Giorgio says.

Who Will Do the Work?

Many firms fear that, once the market begins to recover, they may have staffing shortages. Some engineering firms already are experiencing a lack of qualified people. "On the power side, we are struggling to find enough good engineers," says Vincze.

Vincze is not alone in worrying. "One of the biggest trends I see in the profession and the industry is the number of retiring baby boomers and the small population of 40-somethings in the group behind the baby boomers," says Mark Kramer, president of Soil and Materials Engineers Inc. He believes this will create an experience gap on field teams as institutional knowledge is lost to retirements.

These shortfalls have become an acute issue for some firms. "Offshoring resources was once believed to be the solution," says Bean of O'Neal. But he says that offshoring to places such as India has not worked for fast-track, complicated projects that require intense coordination with other designers, contractors and owners.

Many firms are implementing new personnel policies to retain experienced, older employees. "We are beginning to allow people to cut back on work hours rather than go immediately into retirement," says Pierson. Using this tactic, Parsons Brinckerhoff can retain its talent by allowing people nearing retirement to

The Top 500 Dialogue

ENR: Do you see any existing or new technologies that are helping change the design process?

VINCE DIPOFI, SENIOR VICE PRES.
SSOE GROUP
Toledo, Ohio

"Moving BIM from a design tool to a design-construction tool is key. A few years ago 3D/BIM was a differentiator. Now it's table stakes. [Making] your contractor more efficient ... is now where we need to be."

CARL ROEHLING, CEO
SMITHGROUPJJR
Detroit

"BIM is finally paying off. When we adopted BIM, we knew it would cost a lot before it began to pay off, and we were going to bleed at first, but we are now beginning to see efficiencies it brings and reductions in costs."

TIMOTHY DUFAULT, CEO
CUNINGHAM GROUP ARCHITECTURE
Minneapolis

"Programs like Rhino, Grasshopper and NavisWorks are expanding the capacity of BIM models to be true tools of design. As these ... become more ubiquitous, we will see more complex buildings and design solutions."

KEVIN BOOTS, SENIOR VICE PRES.
RBB ARCHITECTS
Los Angeles

"We developed post-occupancy evaluation software for the iPad that allows us to collect survey and workflow data in our health-care projects. By recording staff and patient flows, we identify potential design efficiencies."

SAMIR "SAM" HANNA, CEO
SURVEYING & MAPPING INC.
Austin, Texas

"New technology is like a hobby for me. We don't like to be first adopters, but we like to stay as close as we can to the bleeding edge of technology without getting bloody ourselves."

ENR: What are your strategies for coping in a difficult market?

DAN HEINFELD, CEO
LPA INC.
Irvine, Calif.

"We fundamentally changed ... from an architectural firm to a multidisciplinary design firm. While the architecture side has not grown, the firm has experienced growth with the addition of the engineering disciplines."

JON D. MAGNUSSON, CEO
MAGNUSSON KLEMENCIC ASSOCS.
Seattle

"As a midsize firm, we find that we are much more nimble than the large engineering firms and able to deliver hands-on principal involvement. Our clients repeatedly tell us that this is exactly what they desire."

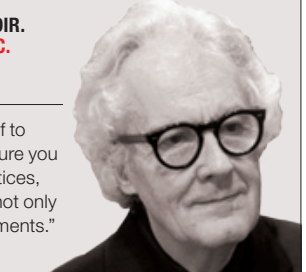

J.T. GRUMSKI, SENIOR VICE PRES.
SAIC
McLean, Va.

"SAIC has used alternative fee arrangements to help bridge smart, complex projects over the financing gap to get from construction to the end goal—an operating asset. SAIC is helping to move key projects forward."

DAVID ROGERS, CO-DESIGN DIR.
THE JERDE PARTNERSHIP INC.
Venice, Calif.

"[In the international market] bolt yourself to local contractors and consultants to assure you know and are informed about local practices, codes and customs of doing business, not only with the owners ... but also local governments."

RALPH HARGROVE, CEO
HARGROVE ENGS.+CONSTRUCTORS
Mobile, Ala.

"We are greatly expanding our presence in the U.S. Northeast to serve the pharmaceutical and biotech manufacturing market. While this industry is being de-emphasized by some big companies, we see opportunities for our firm."

wind down their careers, Pierson says.

CDI has instituted a work-sharing program for older workers and young people with family needs. "If you have the technology to share work with people in India, you can share work with your own people 15 miles away," Giorgio says.

Another issue among design firms is a trend among public clients to retain greater amounts of work for their own staffs. "There is a continued threat by the federal government of insourcing some work [that] is best performed by private-sector engineers and architects," says Ralph W. Christie Jr., CEO of Merrick.

But this concern is not just about the federal government. "Some of the transportation agencies in the West are doing more insourcing to maintain head counts," says Vincze. "This has been a continuing issue in states such as California."

Design as a Commodity

One of the biggest frustrations among design firms is the increasingly held view that design is just a commodity. This emphasis on price is especially annoying as client demands are ramping up but prices are not. "In some markets, we're seeing a trend to commoditization of design services, which is somewhat ironic, as owners and contractors are pressing for innovative and sustainable solutions," says Adams of Parsons.

This view is hurting the designers, too. "Engineering has always been a problem-solving profession," says Giorgio. "When you treat design like a commodity, it will be managed that way, without regard to the value-added capabilities of the top problem-solvers."

Many firms say the market is just now beginning to recover, but few believe the overall market will return to where it was five years ago. "There are a lot of naysayers who complain that the recovery will be slow," says Pierson. "I think a moderate recovery is a good thing. Too fast a recovery just invites just as fast a crash." ■

Movers and Shakers | By Debra K. Rubin

Freese & Nichols Gets Energized

Winning the prestigious Malcolm Baldrige National Quality Award from the U.S. government in 2010, the first and, so far, only construction industry firm ever cited, might seem a culmination for Freese & Nichols. But the organizational performance recognition is just a stop on a "journey of continuous improvement," says CEO Robert Pence.

The firm started the trip in 1996 after its first loss in 118 years. With a new focus on long-term planning, technology, marketing, and staff and client feedback, Pence is confident it will be the last. F&N jumped 21 spots on the Top 500 to **No. 118**, with \$93.3 million in 2011 revenue. "For the past three years, we've grown 10%, 5% and 12%," he says. "Profits have been good, too." The Baldrige experience was key, but Pence says the Texas economy and regional drought also aided the municipal water-wastewater firm. Even so,

forays into airport program management and energy-related work are bearing results. F&N's design of a 195-ft-tall, 1.5-mgd water tower (see photo) in Texas includes enough built-in wind-turbine power for the structure and site; the excess energy will be sold back to the grid.

Pence, an engineer and 34-year firm veteran, credits Chairman Bob Herchert, a former city manager, with "getting us on a management course that few have." The firm also found a niche advising owners, such as the Corps of Engineers and the city of Fort Worth, in making Baldrige-type process improvements. Noting a municipal client struggling with its permitting process, he says, "We found the problem, how to address it, and they turned it around." Pence is optimistic about the future, saying, "Things will break out next year. Money is loosening up." ■

How To Read the Tables
