

SUSE Linux Enterprise Server Certification Matrix for Dell PowerEdge Servers

13 April 2022

Dell PowerEdge Linux Team

Introduction

- This set of matrices attempt to represent the certification status between different versions of the SUSE Linux Enterprise Server (SLES) Operating System and Dell PowerEdge servers
- Dell's Technologies policy is to offer 'validation' support for a new release of SLES at the moment it is GA from SUSE
 - Customers with an existing Dell ProSupport contract who purchased their SLES subscription with their Dell PE server may download and install the new release onto that server and will continue to be covered by their ProSupport contract.
 - Please note that only the contents of the distribution ISO are supported. No other software.
- The owner of a valid SLES subscription may download other versions of SLES at no charge. If the combination of the platform and the OS release are marked as at least Validated, this is supported.

Support levels for a platform/release combination

- There are three levels of status :
 - **Not Supported** : The absence of an icon indicates that this release is not supported or certified for the referenced platform.
 - **Certified**: The release has been successfully certified by Dell teams, or the cert has been carried forward from a previous cert, and will appear on the SUSE hardware certification page, no additional validation has been carried out. Certified is indicated by: 
 - **Validated** : The release has been successfully **Certified** and tested and will appear on the SLES hardware certification page. The contents of the distribution ISO are supported by Dell Technologies for their SLES OEM customers and the ISO contains functioning drivers for the hardware platform. In the following matrices. Validated is indicated by : 
 - **Fully Supported** : The contents of the distribution ISO are **Validated** AND the Dell Technologies Systems Management tools are available for this combination of SLES release and the hardware, Factory installation may be available and there may be Dell drivers available. In the following matrices, Fully Supported is indicated by :
