<i>Preface</i>	<i>ix</i>
<i>Preface to the First Edition</i>	<i>xi</i>
<i>Acknowledgements</i>	<i>xiii</i>
<i>Notations</i>	<i>xv</i>
1. INTRODUCTION	1–22
1.1 Basic Concepts	1
1.2 Classification of Vibrations and Vibrating Systems	7
1.2.1 Free and Forced Vibrations	7
1.2.2 Linear and Nonlinear Vibrations	7
1.2.3 Deterministic and Random Vibrations	8
1.3 Elementary Parts of Vibrating Systems	9
1.3.1 Examples of Vibrating Motion	9
1.3.2 Simple Harmonic Motion	10
1.3.3 Periodic Motion	12
1.3.4 Discrete and Continuous Systems	16
1.4 Vibration Analysis	16
<i>Summary</i>	<i>18</i>
<i>Exercises</i>	<i>18</i>
2. UNDAMPED FREE VIBRATIONS	23–49
2.1 Translational Systems	23
2.2 Torsional Systems	33
2.3 Energy Method	37
<i>Summary</i>	<i>42</i>
<i>Exercises</i>	<i>42</i>
3. DAMPED FREE VIBRATIONS	50–71
3.1 Free Vibrations with Viscous Damping	50
3.2 Logarithmic Decrement	56
3.3 Torsional System with Viscous Damping	59
3.4 Free Vibration with Coulomb Damping	59
3.5 Free Vibration with Hysteretic Damping	64
3.6 Equivalent Viscous Damping	67
<i>Summary</i>	<i>68</i>
<i>Exercises</i>	<i>69</i>

4. FORCED VIBRATIONS	72–119
4.1 Forced Vibrations of Undamped Systems	72
4.2 Forced Vibrations of Damped Systems	80
4.3 Response of Damped Systems under Base Excitation	88
4.4 Rotating Unbalance	92
4.5 Whirling of Rotating Shafts	97
4.6 Vibration Isolation and Force Transmissibility	100
4.7 Response of Vibrating Systems under Coulomb and Hysteresis Damping	103
4.8 Vibration Measuring Instruments	111
Summary	115
Exercises	115
5. TWO-DEGREES-OF-FREEDOM SYSTEMS	120–165
5.1 Free Vibrations of Undamped Systems	121
5.2 Torsional Systems	129
5.3 Coordinate Coupling and Principal Coordinates	134
5.4 Damped Free Vibrations	142
5.5 Forced Vibrations of Undamped Systems	144
5.6 Forced Vibrations with Damping	150
5.7 Dynamic Vibration Absorber	153
5.8 Orthogonality Principle	156
Summary	157
Exercises	158
6. MULTI-DEGREES-OF-FREEDOM SYSTEMS	166–218
6.1 Equations of Motion	167
6.2 Method of Influence Coefficients	170
6.3 Lagrange’s Equation	176
6.4 Free Vibrations of Undamped Systems	180
6.4.1 Natural Frequencies and Mode Shapes	181
6.4.2 Mode Shape Orthogonality	188
6.5 Free Vibrations of Damped Systems	196
6.5.1 Proportional Damping (Rayleigh-damping)	197
6.5.2 General Viscous Damping	199
6.6 Forced Vibrations of Multi-Degrees-of-Freedom Systems	201
6.6.1 Harmonic Excitations	202
6.6.2 Laplace Transform Solutions	204
6.6.3 Modal Analysis for Undamped Systems	206
6.6.4 Modal Analysis for Damped Systems	207
Summary	212
Exercises	212

7.	NUMERICAL TECHNIQUES TO FIND NATURAL FREQUENCIES	219–242
7.1	Rayleigh’s Method	219
7.2	Holzer’s Method	221
7.3	Matrix Iteration Method	225
7.4	Cholesky Decomposition	227
7.5	Jacobi Diagonalization Method	229
7.6	Iteration Methods	232
7.6.1	Inverse Iteration Method	233
7.6.2	Simultaneous Iteration Method	235
7.6.3	Subspace Iteration Method	238
	<i>Summary</i>	240
	<i>Exercises</i>	240
8.	VIBRATION ANALYSIS OF CONTINUOUS SYSTEMS	243–292
8.1	Transverse Vibration of Strings	243
8.2	Longitudinal Vibration of Rods	250
8.3	Torsional Vibration of Shafts	257
8.4	Transverse Vibration of Beams	261
8.4.1	Effects of the Rotary Inertia and Shear Deformation	270
8.5	Approximate Solution Methods	275
8.5.1	Rayleigh’s Method	275
8.5.2	Rayleigh–Ritz Method	281
8.5.3	Galerkin’s Method	285
	<i>Summary</i>	286
	<i>Exercises</i>	287
9.	TRANSIENT AND RANDOM VIBRATION ANALYSIS	293–315
9.1	Response to Impulse Excitation	293
9.2	Response to an Arbitrary Forcing Function	296
9.3	Base Excitation	302
9.4	Laplace Transformation Method	302
9.5	Response to Random Inputs	304
9.6	Shock Response Spectrum	309
	<i>Summary</i>	311
	<i>Exercises</i>	312
10.	FINITE ELEMENT METHOD	316–346
10.1	General Method	317
10.2	Bar Element	318
10.3	Beam Element	320
10.4	Global Matrices	322
10.5	Transformation of Element Matrices and Vectors	325
10.6	Equations of Motion of the Complete System of Finite Elements	328
10.6.1	Incorporation of Boundary Conditions	328

10.7 Consistent and Lumped Mass Matrices	329
10.7.1 Lumped Mass Matrix for Bar and Beam Elements	329
10.8 Model Reduction	341
<i>Summary</i>	344
<i>Exercises</i>	344
11. NONLINEAR VIBRATIONS	347–415
11.1 Introduction	347
11.2 Approximate Solution Techniques	357
11.2.1 Perturbation Method (Lindstedt)	358
11.2.2 Iterative Method	363
11.2.3 Harmonic Balance Method	366
11.2.4 Method of Multiple scales	369
11.3 Subharmonic and Superharmonic Oscillations	375
11.4 Phase-plane Method	384
11.4.1 Stability of Equilibrium	387
11.4.2 Method of Isoclines	393
11.5 Limit Cycles	396
11.6 Chaos	397
11.6.1 Attractor and Strange Attractor	398
11.6.2 Phase-plane Diagrams to Predict Chaos	398
11.6.3 Poincare Maps to Predict Chaos	400
11.6.4 Lyapunov Exponent as Chaos Measures	402
11.6.5 Routes to Chaos	403
11.7 Numerical Solution Techniques	405
<i>Summary</i>	409
<i>Exercises</i>	409
<i>Appendix A.1 Laplace Transforms</i>	<i>417–422</i>
<i>Appendix A.2 Numerical Integration Methods in Vibration Analysis</i>	<i>423–439</i>
<i>Appendix A.3 Transverse Vibrations of Beams</i>	<i>440</i>
<i>Bibliography</i>	<i>441–444</i>
<i>Answers to Selected Exercises</i>	<i>445–459</i>
<i>Index</i>	<i>461–463</i>

Preface

In this second edition, while retaining the approach and organization of the first edition, the following new features and improvements have been incorporated.

- A new chapter on *nonlinear vibrations* is introduced, emphasizing the importance of nonlinear oscillations and their analysis approaches for predicting the stability of the system. The concept of limit cycles and bifurcation analysis as well as prediction of chaotic oscillating conditions are explained in a lucid style.
- One appendix on *transverse vibrations of beams* summarizing the mode shape functions for important boundary conditions has been introduced.

Most typographical errors have also been corrected.

It is for the information of the readers that Professor R.V. Dukkipati passed away on 13 February, 2010.

J. Srinivas

Preface to the First Edition

The purpose of this book is to impart a basic understanding, both physically and mathematically, of the principles of vibrations and their applications. In this book, an attempt is made to present in simple and systematic manner, the techniques that can be applied to the study of mechanical vibrations. Special emphasis is placed on analytical developments and computational solutions. Being intended as a first course on the theory of mechanical vibrations, the concepts have been presented in simple terms and the solution procedures have been explained in detail.

The book is comprehensive and self-contained. It assumes no previous knowledge of dynamics and vibrations of the reader and will serve to fulfill the needs of the following categories of readers:

- Senior undergraduate and postgraduate students taking the course on mechanical vibrations
- Design and research engineers who need to select and develop mathematical models for analytical and design purposes
- Practising engineers and managers who want to learn the basic principles and concepts involved in mechanical vibration analysis and apply these to their own work place concerns.

Besides, the book may be adopted for a short professional course on the subject it presents. Since the book addresses a wide range of audience, the level of mathematics has been intentionally kept low. All the principles presented are illustrated by numerous worked-out examples. The book strikes an optimum balance between theory and practice.

In the organization and presentation of the material, utmost care has been taken to introduce the various concepts and their application to problems in a gradual step-by-step manner. The subject of mechanical vibrations deals with the methods and means for formulating mathematical models of physical systems and evolving their solutions. Both these aspects: the tools for formulating the mathematical equations and also the methods of solving them have been emphasized.

Each chapter in this book consists of concise but thorough statement of the fundamental theory; principles and methods, followed by a number of selected illustrative worked examples. A number of sample unsolved exercise problems have also been included so as to enable the earnest student to reinforce and extend the comprehension of the concepts. Answers to selected problems are given towards the end of the book. The numerous reference titles listed in the bibliography at the end of the book serve as guidelines for further study and research.
